<b>1 Before You Start.....</b>	<b>1</b>
1.1 Overview.....	1
1.2 API Calling.....	1
1.3 Endpoints.....	1
1.4 Constraints.....	2
1.5 Basic Concepts.....	2
<b>2 Overview.....</b>	<b>4</b>
<b>3 Calling APIs.....</b>	<b>6</b>
3.1 Making an API Request.....	6
3.2 Authentication.....	10
3.3 Returned Values.....	11
<b>4 Getting Started.....</b>	<b>14</b>
4.1 Creating a Queue.....	14
4.2 Creating and Submitting a SQL Job.....	15
4.3 Creating and Submitting a Spark Job.....	18
4.4 Creating and Submitting a Flink Job.....	21
4.5 Creating and Using a Datasource Connection.....	23
<b>5 Permission-related APIs.....</b>	<b>26</b>
5.1 Granting Users with the Queue Usage Permission.....	26
5.2 Querying Queue Users.....	29
5.3 Granting Data Permission to Users.....	31
5.4 Querying Database Users.....	34
5.5 Querying Table Users.....	37
5.6 Querying a User's Table Permissions.....	39
5.7 Viewing the Granted Permissions of a User.....	41
<b>6 Queue-related APIs (Recommended).....</b>	<b>45</b>
6.1 Creating a Queue.....	45
6.2 Deleting a Queue.....	48
6.3 Querying All Queues.....	50
6.4 Viewing Details of a Queue.....	54
6.5 Restarting, Scaling Out, and Scaling In Queues.....	57

6.6 Creating a Scheduled CU Change.....	59
6.7 Viewing a Scheduled CU Change.....	62
6.8 Deleting Scheduled CU Changes in Batches.....	65
6.9 Deleting a Scheduled CU Change.....	67
6.10 Modifying a Scheduled CU Change.....	69
<b>7 SQL Job related APIs.....</b>	<b>73</b>
7.1 Submitting a SQL Job (Recommended).....	73
7.2 Canceling a Job (Recommended).....	78
7.3 Querying All Jobs.....	79
7.4 Previewing SQL Job Query Results.....	84
7.5 Querying Job Status.....	87
7.6 Querying Job Details.....	90
7.7 Checking SQL Syntax.....	93
7.8 Exporting Query Results.....	95
7.9 Querying the Job Execution Progress.....	98
<b>8 Resource-related APIs.....</b>	<b>104</b>
8.1 Package Group-related APIs.....	104
8.1.1 Uploading a Package Group.....	104
8.1.2 Querying Package Group List.....	108
8.1.3 Uploading a JAR Package Group.....	112
8.1.4 Uploading a PyFile Package Group.....	115
8.1.5 Uploading a File Package Group.....	119
8.1.6 Querying Resource Packages in a Group.....	122
8.1.7 Deleting a Resource Package from a Group.....	124
8.1.8 Changing the Owner of a Group or Resource Package.....	126
8.2 Database-related APIs.....	128
8.2.1 Creating a Database.....	128
8.2.2 Deleting a Database.....	131
8.2.3 Querying All Databases.....	133
8.2.4 Modifying a Database Owner.....	136
8.3 Table-related APIs.....	138
8.3.1 Creating a Table.....	138
8.3.2 Deleting a Table.....	143
8.3.3 Importing Data.....	145
8.3.4 Exporting Data.....	150
8.3.5 Querying All Tables (Recommended).....	153
8.3.6 Describing the Table Information.....	157
8.3.7 Previewing Table Content.....	161
8.3.8 Obtaining the Partition List.....	163
<b>9 APIs Related to Flink Jobs.....</b>	<b>168</b>
9.1 Granting OBS Permissions to DLI.....	168

9.2 Creating a SQL Job.....	170
9.3 Updating a SQL Job.....	175
9.4 Creating a Flink Jar job.....	180
9.5 Updating a Flink Jar Job.....	185
9.6 Running Jobs in Batches.....	189
9.7 Querying the Job List.....	191
9.8 Querying Job Details.....	198
9.9 Querying the Job Execution Plan.....	205
9.10 Stopping Jobs in Batches.....	207
9.11 Deleting a Job.....	209
9.12 Deleting Jobs in Batches.....	211
9.13 Exporting a Flink Job.....	212
9.14 Importing a Flink Job.....	214
<b>10 APIs Related to Spark jobs.....</b>	<b>217</b>
10.1 Batch Processing-related APIs.....	217
10.1.1 Creating a Batch Processing Job.....	217
10.1.2 Canceling a Batch Processing Job.....	224
10.1.3 Obtaining the List of Batch Processing Jobs.....	225
10.1.4 Querying Batch Job Details.....	228
10.1.5 Querying a Batch Job Status.....	231
10.1.6 Querying Batch Job Logs.....	232
<b>11 APIs Related to Flink Job Templates.....</b>	<b>235</b>
11.1 Creating a Template.....	235
11.2 Updating a Template.....	238
11.3 Deleting a Template.....	240
11.4 Querying the Template List.....	241
<b>12 APIs Related to Enhanced Datasource Connections.....</b>	<b>245</b>
12.1 Creating an Enhanced Datasource Connection.....	245
12.2 Deleting an Enhanced Datasource Connection.....	248
12.3 Querying an Enhanced Datasource Connection List.....	250
12.4 Querying an Enhanced Datasource Connection.....	254
12.5 Binding a Queue.....	257
12.6 Unbinding a Queue.....	259
12.7 Modifying the Host Information.....	261
12.8 Querying Authorization of an Enhanced Datasource Connection.....	263
<b>13 Global Variable-related APIs.....</b>	<b>266</b>
13.1 Creating a Global Variable.....	266
13.2 Deleting a Global Variable.....	268
13.3 Modifying a Global Variable.....	270
13.4 Querying All Global Variables.....	272
<b>14 Permissions Policies and Supported Actions.....</b>	<b>275</b>

<b>15 Out-of-Date APIs.....</b>	<b>288</b>
15.1 Table-related APIs (Discarded).....	288
15.1.1 Querying All Tables (Discarded).....	288
15.2 APIs Related to SQL Jobs (Discarded).....	290
15.2.1 Submitting a SQL Job (Discarded).....	291
15.2.2 Canceling a Job (Discarded).....	294
15.2.3 Querying the Job Execution Result-Method 1 (Discarded).....	295
15.2.4 Querying the Job Execution Result-Method 2 (Discarded).....	297
15.3 APIs Related to Data Upload (Discarded).....	299
15.3.1 Authenticating a Created Data Uploading Job (Discarded).....	300
15.4 Cluster-related APIs.....	301
15.4.1 Creating a Cluster (Discarded).....	301
15.4.2 Deleting a Cluster (Discarded).....	303
15.4.3 Querying Information of a Specified Cluster (Discarded).....	304
15.4.4 Querying All Cluster Information (Discarded).....	306
15.5 APIs Related to Flink Jobs (Discarded).....	307
15.5.1 Querying Job Monitoring Information (Discarded).....	307
<b>16 Public Parameters.....</b>	<b>311</b>
16.1 Status Codes.....	311
16.2 Error Codes.....	314
16.3 Obtaining a Project ID.....	316
16.4 Obtaining an Account ID.....	317
<b>A Change History.....</b>	<b>318</b>

# 1 Before You Start

## 1.1 Overview

Welcome to Data Lake Insight API Reference.

Data Lake Insight (DLI) is a serverless data processing and analysis service fully compatible with [Apache Spark](#) and [Apache Flink](#) ecosystems. It frees you from managing any server. You can use stream analysis (with standard SQL), batch analysis (with Spark SQL), and interactive analysis (with Flink SQL) to query mainstream data formats without data ETL. DLI supports SQL statements and Spark applications for heterogeneous data sources, including CloudTable, RDS, DWS, CSS, OBS, custom databases on ECSs, and offline databases.

You can use APIs provided in this document to perform DLI operations, including queues, SQL jobs, Flink jobs, Spark jobs, and datasource connections. For details about all supported operations, see [Overview](#).

Before calling DLI APIs, get yourself familiar with DLI concepts. For details, see "What Is DLI?" in *Data Lake Insight User Guide*.

## 1.2 API Calling

DLI provides RESTful (Representational State Transfer) APIs, allowing you to use HTTPS to call them. For details, see [Making an API Request](#).

Unless otherwise specified, DLI APIs are synchronous. Specifically, **is\_success**, indicating whether a request is successfully executed, is returned.

If the DLI API is asynchronous, run the API related to [Querying Job Status](#) according to the value of **job\_id** in the response message to learn whether the API is successfully executed.

## 1.3 Endpoints

An endpoint is the **request address** for calling an API. Endpoints vary depending on services and regions. For the endpoints of all services, see [Regions and Endpoints](#).

## 1.4 Constraints

- The number of resources you can create is determined by quota. To view or increase the quota, see "How Do I Increase a Quota?" in *Data Lake Insight User Guide*.
- For more constraints, see the API descriptions.

## 1.5 Basic Concepts

### Account

The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. The account is a payment entity and should not be used to perform routine management. For security purposes, create IAM users and grant them permissions for routine management.

### User

An IAM user is created by an account in IAM to use cloud services. Each IAM user has its own identity credentials (password and access keys).

The account name, username, and password will be required for API authentication.

### Region

A region is a geographic area where cloud resources are deployed. Availability zones (AZs) in the same region can communicate with each other over an intranet, while AZs in different regions are isolated from each other. By creating cloud resources in different regions, you can better meet customer requirements and comply with local laws and regulations.

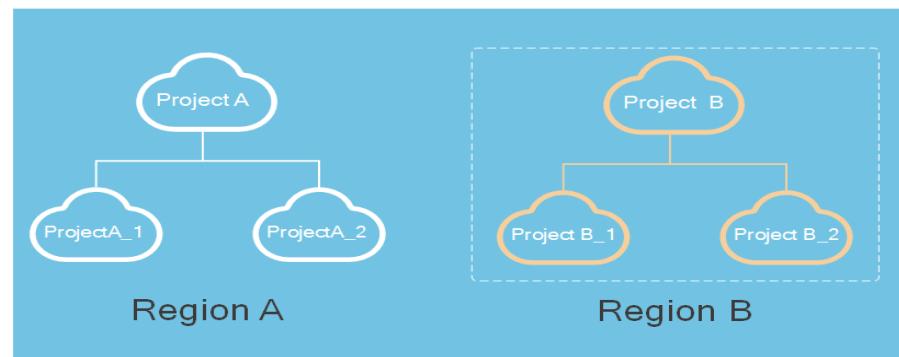

### AZ

An AZ contains one or more physical data centers. Each AZ has independent cooling, fire extinguishing, moisture-proof, and electricity facilities. Within an AZ, computing, network, storage, and other resources are logically divided into multiple clusters. AZs within a region are interconnected using high-speed optical fibers to support cross-AZ high-availability systems.

### Project

Projects group and isolate compute, storage, and network resources across physical regions. A default project is provided for each region, and subprojects can be created under each default project. Users can be granted permissions to access all resources in a specific project. If you need more refined access control, create subprojects under a default project and purchase resources in subprojects. Then you can assign users the permissions required to access only the resources in the specific subprojects.

**Figure 1-1** Project isolating model

# 2 Overview

This section describes the APIs provided by DLI.

**Table 2-1** DLI APIs

Type	Subtype	Description
Permission-related APIs	-	You can assign permissions to queues, view queue users, assign data permissions, view database users, view table users, view table user permissions, and view the permissions of authorized users.
Agency-related APIs	-	Obtain the DLI agency information and create a DLI agency.
Queue-related APIs (Recommended)	-	You can create queues, delete queues, query all queues, modify the CIDR block of a queue, restart, scale out, or scale in a queue, query queue details, create a request for testing the connectivity of a specified address, query the connectivity of a specified address, create a scheduled queue scaling plan, query a scheduled queue scaling plan, delete scheduled queue scaling plans in batches, and delete or modify a scheduled queue scaling plan.
APIs Related to SQL Jobs	Database-related APIs	You can create a database, delete a database, view all databases, and modify database users.
	Table-related APIs	You can create, delete, and query tables, describe table information, preview table content, modify table users, and obtain the partition information list.
	Job-related APIs	You can import and export data, submit SQL jobs, cancel jobs, query all jobs, preview job results, query job status, query job details, check SQL syntax, and export query results.

Type	Subtype	Description
Package Group-related APIs	-	You can upload a group resource, query the group resource list, upload a group resource in JAR format, upload a <b>PyFile</b> group resource, upload a <b>File</b> type group resource, query a resource package in a group, delete a resource package in a group, and change the owner of a group or resource package.
APIs Related to Flink Jobs	-	You can authorize DLI to OBS, create and update SQL jobs and user-defined Flink jobs, run jobs in batches, query the job list, job details, job execution plans, and job monitoring information. You can also stop jobs in batches, delete and batch delete jobs, export and import Flink jobs, create IEF message channels, report Flink job status and callback Flink job actions at the edge, and report IEF system events.
APIs related to Spark jobs	Batch Processing-related APIs	Creating batch jobs, cancel batch jobs, querying batch job lists, querying batch job details, querying batch job status, and querying batch job logs.
APIs Related to Flink Job Templates	-	You can create, update, and delete a template, and query the template list.
APIs Related to Enhanced Datasource Connections	-	You can create and delete enhanced datasource connections, query the enhanced datasource connection list as well as the connections, bind and unbind queues, modify host information, and query enhanced datasource connection permissions.
APIs Related to Global Variables	-	You can create, delete, modify, and query global variables.

# 3 Calling APIs

## 3.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM service as an example to explain how to obtain a user token to call an API. The obtained token can then be used to authenticate the calling of other APIs.

### Request URI

A request URI is in the following format:

**{URI-scheme} :// {Endpoint} / {resource-path} ? {query-string}**

Although a request URI is included in a request header, most programming languages or frameworks require the request URI to be separately transmitted, rather than being conveyed in a request message.

**Table 3-1** Parameters in a URI

Parameter	Description
URI-scheme	Protocol used to transmit requests. All APIs use HTTPS.
Endpoint	Domain name or IP address of the server bearing the REST service. Endpoints vary depending on services and regions. For the endpoints of all services, see <a href="#">Regions and Endpoints</a> . For example, the endpoint of IAM in the <b>ru-moscow-1</b> region is <b>iam.ru-moscow-1.hc.sbercloud.ru</b> .
resource-path	Access path of an API for performing a specified operation. Obtain the value from the URI of an API. For example, the <b>resource-path</b> of the API used to <b>obtain a user token</b> is <b>/v3/auth/tokens</b> .

Parameter	Description
query-string	Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of <i>Parameter name=Parameter value</i> . For example, ? <b>limit=10</b> indicates that a maximum of 10 data records will be displayed.

### NOTE

To simplify the URI display, each API is provided with only a **resource-path** and a request method. This is because the **URI-scheme** value of all APIs is **HTTPS**, and the endpoints in a region are the same. Therefore, the two parts are omitted.

## Request Methods

HTTP-based request methods, which are also called operations or actions, specify the type of operations that you are requesting.

**Table 3-2** HTTP method

Request Method	Description
GET	Requests a server to return specified resources.
PUT	Requests the server to update specified resources.
POST	Requests the server to add resources or perform special operations.
DELETE	Requests the server to delete a specific resource, for example, an object.
HEAD	Same as GET except that the server must return only the response header.
PATCH	Requests a server to update part of specified resources. If the resource is unavailable, the PATCH method is used to create a resource.

For example, in the case of the API used to obtain a user token, the request method is **POST**. The request is as follows:

```
POST https://{{endpoint}}/v3/auth/tokens
```

## Request Header

You can also add additional fields to a request, such as the fields required by a specified URI or an HTTP method. For example, add **Content-Type** that defines a request body type to request for the authentication information.

**Table 3-3** lists common request header fields.

**Table 3-3** Common request headers

Parameter	Description	Mandatory	Example
Host	Specifies the information about the requested server. The value can be obtained from the URL of the service API. The value is <b>hostname[:port]</b> . If the port number is not specified, the default port is used. The default port number for <b>https</b> is port <b>443</b> .	No This header field is mandatory if AK/SK authentication is in use.	code.test.com or code.test.com:443
Content-Type	Specifies the request body type or format. This field is mandatory and its default value is application/json. For other values, the description will be provided for specific APIs.	Yes	application/json
Content-Length	Indicates the length of the request body. The unit is byte.	This field is mandatory for POST and PUT requests, but must be left blank for GET requests.	3495
X-Project-ID	Project ID. It is mandatory in multi-project scenarios to obtain tokens for different projects.	No	e9993fc787d94b6c886cbaa340f9c0f4
X-Auth-Token	User token. User token is a response to the API for obtaining a user token (only this API does not require authentication).	This parameter is mandatory only for authentication using tokens.	The following is part of an example token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBII NPXsidG9rZ
Authorization	Specifies the signature authentication information. The value can be obtained from the request signing result.	This header field is mandatory if AK/SK authentication is in use.	-

Parameter	Description	Mandatory	Example
X-Sdk-Date	<p>Specifies the time when the request is sent. The time is in <code>YYYYMMDD'T'HHMMSSZ</code> format.</p> <p>The value is the current Greenwich Mean Time (GMT) of the system.</p>	This header field is mandatory if AK/SK authentication is in use.	20150907T101459Z
X-Language	Request language.	No	en-us

#### NOTE

In addition to supporting token-based authentication, APIs also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature authentication) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

The API for obtaining a user token does not require authentication. Therefore, this API only requires adding the Content-Type field. The request with the added Content-Type header is as follows:

```
POST https://{{endpoint}}/v3/auth/tokens
Content-Type: application/json
```

## Request Body

A request body is generally sent in a structured format. It corresponds to **Content-Type** in the request header and transfers data except for the request header.

The request body varies according to the APIs. Certain APIs do not require the request body, such as the GET and DELETE APIs.

For the API of obtaining a user token, obtain the request parameters and parameter description from the API request. The following provides an example request with a body included. Replace **username**, **domainname**, **\*\*\*\*\*** (login password), and **xxxxxxxxxxxxxxxxxx** (project ID) with the actual values. Obtain a project ID from the administrator.

#### NOTE

**scope** specifies where a token takes effect. In the following example, the token takes effect only on the resources specified by the project ID. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see [Obtaining a User Token](#).

```
POST https://{{endpoint}}/v3/auth/tokens
Content-Type: application/json

{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "domain": {
            "name": "domainname"
          },
          "name": "username",
          "secret": "*****"
        }
      }
    }
  }
}
```

```
        ],
        "password": {
            "user": {
                "name": "username",
                "password": "*****",
                "domain": {
                    "name": "domainname"
                }
            }
        }
    },
    "scope": {
        "project": {
            "name": "xxxxxxxxxxxxxxxxxxxx"
        }
    }
}
```

If all data required by a request is available, you can send the request to call an API through [curl](#), [Postman](#), or coding. In the response to the IAM API used to obtain a user token, **x-subject-token** is the desired user token. Then, you can use the token to authenticate the calling of other APIs.

## 3.2 Authentication

API calling is authenticated using either of the following methods:

- Token authentication: Common requests are authenticated using Tokens.
- AK/SK authentication: Requests are encrypted using the access key ID and secret access key (AK/SK pair) to provide higher security. AK/SK authentication is recommended because it provides higher security than token authentication.

### Token Authentication

A token specifies certain permissions in a computer system. Authentication using a token adds the token in a request as its header during API calling to obtain permissions to operate APIs through IAM.

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the IAM API.

When calling the API to obtain a user token, you must set **auth.scope** in the request body to **project**.

```
{
    "auth": {
        "identity": {
            "methods": [
                "password"
            ],
            "password": {
                "user": {
                    "name": "username",
                    "password": "*****",
                    "domain": {
                        "name": "domainname"
                    }
                }
            }
        }
    }
}
```

```
        },
        "scope": {
            "project": {
                "name": "xxxxxxxx"
            }
        }
    }
```

After obtaining the token, add the **X-Auth-Token** header in a request to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, add **X-Auth-Token: ABCDEFJ....** in a request as follows:

```
GET https://{{endpoint}}/v3/auth/projects
Content-Type: application/json
X-Auth-Token: ABCDEFJ....
```

## AK/SK Authentication

In authentication using AK/SK, AK/SK is used to sign a request and add the signature in a request as its header for authentication.

### NOTE

Authentication using AK/SK supports API requests with a body not larger than 12 MB. For API requests with a larger body, authentication using tokens is recommended.

- AK: access key ID, which is a unique identifier associated with a secret access key and is used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In authentication using AK/SK, you can use AK/SK to sign requests based on the signature algorithm or use a dedicated signature SDK to sign the requests.

For details about how to sign requests and use the signature SDK, see [API Signing Guide](#).

### NOTE

The signature SDK only supports signature, which is different from the SDKs provided by services.

## 3.3 Returned Values

### Status Code

After sending a request, you will receive a response, including the status code, response header, and response body.

A status code is a group of digits ranging from 1xx to 5xx. It indicates the status of a response. For more information, see [Status Codes](#).

For example, if status code **201** is returned for calling the API used to obtain a user token, the request is successful.

## Response Header

A response header corresponds to a request header, for example, **Content-Type**.

Figure [Figure 3-1](#) shows the response header fields for the API that obtains a user token. The **x-subject-token** value is the desired user token. You can use the token to authenticate other API calls.

**Figure 3-1** Header of the response to the request for obtaining a user token

```
connection → keep-alive
content-type → application/json
date → Tue, 12 Feb 2019 06:52:13 GMT
server → Web Server
strict-transport-security → max-age=31536000; includeSubdomains;
transfer-encoding → chunked
via → proxy A
x-content-type-options → nosniff
x-download-options → noopener
x-frame-options → SAMEORIGIN
x-iam-trace-id → 218d45ab-d674-4995-af3a-2d0255ba41b5
x-subject-token
→ MIIYXQVJKoZlhvcNAQcCoIYTjCCGEoCAQEExDTALBglhgkBZQMEAgEwgharBgkqhkiG9w0BBwGgg hacBIIWmHsIdG9rZW4iOnsiZXhwaXJlc19hdCl6ijlwMTktMDItMTNU McDl3kjU6gKnpVNrbW2eZ5eb78SZOkqjACgkIqOwi4JlGzrd18LGK5bldfq4lqHCYb8P4NaY0NYejcAgz/VeFIytLWT1GSO0zxKzmlQHQj82H8qHdgjZC9fuEbL5dMhdavj+33wEl xHRC9187o+k9-j+CMZSEB7bUGd5Uj6eRASX1jiPPEGA270g1FrueoL6jqglFkNPQuFSOU8+uSsttVwRtNfsC+qTp22Rkd5MCqFGQ8LcuUxC3a+9CMBnOintWW7oeRUvhVpxk8pxiX1wTEboXRzT6MUUpvGw-oPNFYxJCKnoH3HRozv0vN--n5d6Nbixg=-
x-xss-protection → 1; mode=block;
```

## Response Body

A response body is generally returned in a structured format, corresponding to the **Content-Type** in the response header, and is used to transfer content other than the response header.

The following shows part of the response body for the API to obtain a user token. The following describes only part of the request body.

```
{
  "token": {
    "expires_at": "2019-02-13T06:52:13.855000Z",
    "methods": [
      "password"
    ],
    "catalog": [
      {
        "endpoints": [
          {
            "region_id": "az-01",
            ....

```

If an error occurs during API calling, the system returns an error code and a message to you. The following shows the format of an error response body:

```
{
  "error_msg": "The format of message is error",
  "error_code": "AS.0001"
}
```

In the preceding information, **error\_code** is an error code, and **error\_msg** describes the error.

# 4 Getting Started

## 4.1 Creating a Queue

### Scenario Description

This section describes how to create and query a queue using APIs.

### Constraints

- Queues created using this API will be bound to specified compute resources.
- It takes 6 to 10 minutes to start a job using a new queue for the first time.

### Involved APIs

- [Creating a Queue](#): Create a queue.
- [Viewing Details of a Queue](#): Ensure that the queue is successfully created.

### Procedure

1. Create a queue.
  - API  
URI format: POST /v1.0/{project\_id}/queues
    - Obtain the value of {project\_id} from [Obtaining a Project ID](#).
    - For details about the request parameters, see [Creating a Queue](#).
  - Request example
    - Description: Create an SQL queue named **queue1** in the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
    - Example URL: POST `https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/queues`
    - Body:

```
{  
    "queue_name": "queue1",
```

- ```
        "description": "test",
        "cu_count": 16,
        "resource_mode": 1,
        "queue_type": "sql"
    }
```
- Example response

```
{  
    "is_success": true,  
    "message": "",  
    "queue_name": "queue1"  
}
```
2. Verify that the queue is created successfully.
- API
    - URI format: GET /v1.0/{project\_id}/queues/{queue\_name}
      - Obtain the value of {project\_id} from [Obtaining a Project ID](#).
      - For details about the query parameters, see [Viewing Details of a Queue](#).
    - Request example
      - Description: Query details about queue1 in the project whose ID is 48cc2c48765f481480c7db940d6409d1.
      - Example URL: GET https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/queues/queue1
      - Body:

```
{}
```
  - Example response

```
{  
    "is_success": true,  
    "message": "",  
    "owner": "testuser",  
    "description": "",  
    "queue_name": "queue1",  
    "create_time": 1587613028851,  
    "queue_type": "sql",  
    "cu_count": 16,  
    "resource_id": "03d51b88-db63-4611-b779-9a72ba0cf58b",  
    "resource_mode": 0  
}
```

## 4.2 Creating and Submitting a SQL Job

### Scenario Description

This section describes how to create and query SQL jobs using APIs.

### Constraints

- It takes 6 to 10 minutes to start a job using a new queue for the first time.

### Involved APIs

- [Creating a Queue](#): Create a queue.

- [Creating a Database](#): Create a database.
- [Creating a Table](#): Create a table.
- [Importing Data](#): Import the data to be queried.
- [Querying Job Details](#): Check whether the imported data is correct.
- [Submitting a SQL Job \(Recommended\)](#): Submit a query job.

## Procedure

1. Create a SQL queue. For details, see [Creating a Queue](#).
2. Create a database.
  - API
    - Obtain the value of `{project_id}` from [Obtaining a Project ID](#).
    - For details about the request parameters, see [Creating a Database](#).
  - Request example
    - Description: Creates a database named **db1** in the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
    - Example URL: POST `https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/databases`
    - Body:

```
{
    "database_name": "db1",
    "description": "this is for test"
}
```
  - Example response

```
{
    "is_success": true,
    "message": ""
}
```
3. Create a table.
  - API
    - Obtain the value of `{project_id}` from [Obtaining a Project ID](#).
    - For details about the request parameters, see [Creating a Table](#).
  - Request example
    - Description: In the project whose ID is **48cc2c48765f481480c7db940d6409d1**, create a table named **tb1** in the **db1** database.
    - Example URL: POST `https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/databases/db1/tables`
    - Body:

```
{
    "table_name": "tb1",
    "data_location": "OBS",
    "description": ""
}
```

```
"data_type": "csv",
"data_path": "obs://obs/path1/test.csv",
"columns": [
  {
    "column_name": "column1",
    "type": "string",
    "description": "",
    "is_partition_column": true
  },
  {
    "column_name": "column2",
    "type": "string",
    "description": "",
    "is_partition_column": false
  }
],
"with_column_header": true,
"delimiter": ",",
"quote_char": "\",
"escape_char": "\\",
"date_format": "yyyy-MM-dd",
"timestamp_format": "yyyy-MM-dd HH:mm:ss"
}
```

- Example response

```
{
  "is_success": true,
  "message": ""
}
```

4. (Optional) If the table to be created does not contain data, use the [Importing Data](#) API to import data to the table.
5. (Optional) After data is imported, you can use the [Querying Job Details](#) API to check whether the imported data is correct.
6. Submit a query job.

- API

URI format: POST /v1.0/{*project\_id*}/jobs/submit-job

- Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
- For details about the request parameters, see [Creating a Database](#).

- Request example

- Description: Submit a SQL job in the project whose ID is **48cc2c48765f481480c7db940d6409d1** and query data in the **tb1** table in the database **db1**.
- Example URL: POST <https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/jobs/submit-job>

- Body:

```
{
  "currentdb": "db1",
  "sql": "select * from tb1 limit 10",
  "queue_name": "queue1"
}
```

- Example response

```
{
  "is_success": true,
  "message": "",
  "job_id": "95fcc908-9f1b-446c-8643-5653891d9fd9",
  "job_type": "QUERY",
}
```

```
        "job_mode": "async"  
    }
```

## 4.3 Creating and Submitting a Spark Job

### Scenario Description

This section describes how to create and submit Spark jobs using APIs.

### Constraints

- It takes 6 to 10 minutes to start a job using a new queue for the first time.

### Involved APIs

- [Creating a Queue](#): Create a queue.
- [Uploading a Package Group](#): Upload the resource package required by the Spark job.
- [Querying Resource Packages in a Group](#): Check whether the uploaded resource package is correct.
- [Creating a Batch Processing Job](#): Create and submit a Spark batch processing job.
- [Querying a Batch Job Status](#): View the status of a batch processing job.
- [Querying Batch Job Logs](#): View batch processing job logs.

### Procedure

- Create a common queue. For details, see [Creating a Queue](#).
- Upload a package group.
  - API
    - URI format: POST /v2.0/{*project\_id*}/resources
      - Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
      - For details about the request parameters, see [Uploading a Package Group](#).
    - Request example
      - Description: Upload resources in the GATK group to the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
      - Example URL: POST [https://\[{endpoint}\]/v2.0/48cc2c48765f481480c7db940d6409d1/resources](https://[{endpoint}]/v2.0/48cc2c48765f481480c7db940d6409d1/resources)
      - Body:

```
{  
    "paths": [  
        "https://test.obs.xxx.com/txr_test/jars/spark-sdv-app.jar"  
    ],  
    "kind": "jar",  
    "group": "gatk",  
    "is_async": "true"  
}
```

- Example response

```
{
  "group_name": "gatk",
  "status": "READY",
  "resources": [
    "spark-sdv-app.jar",
    "wordcount",
    "wordcount.py"
  ],
  "details": [
    {
      "create_time": 0,
      "update_time": 0,
      "resource_type": "jar",
      "resource_name": "spark-sdv-app.jar",
      "status": "READY",
      "underlying_name": "987e208d-d46e-4475-a8c0-a62f0275750b_spark-sdv-app.jar"
    },
    {
      "create_time": 0,
      "update_time": 0,
      "resource_type": "jar",
      "resource_name": "wordcount",
      "status": "READY",
      "underlying_name": "987e208d-d46e-4475-a8c0-a62f0275750b_wordcount"
    },
    {
      "create_time": 0,
      "update_time": 0,
      "resource_type": "jar",
      "resource_name": "wordcount.py",
      "status": "READY",
      "underlying_name": "987e208d-d46e-4475-a8c0-a62f0275750b_wordcount.py"
    }
  ],
  "create_time": 1551334579654,
  "update_time": 1551345369070
}
```

3. View resource packages in a group.

- API

URI format: GET /v2.0/{*project\_id*}/resources/{*resource\_name*}

- Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
- For details about the query parameters, see [Creating a Table](#).

- Request example

- Description: Query the resource package named **luxor-router-1.1.1.jar** in the GATK group under the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
- Example URL: GET https://{{*endpoint*}}/v2.0/48cc2c48765f481480c7db940d6409d1/resources/luxor-router-1.1.1.jar?group=gatk
- Body:  

```
{}
```

- Example response

```
{
  "create_time": 1522055409139,
  "update_time": 1522228350501,
  "resource_type": "jar",
  "resource_name": "luxor-router-1.1.1.jar",
```

```
        "status": "uploading",
        "underlying_name": "7885d26e-c532-40f3-a755-c82c442f19b8_luxor-router-1.1.1.jar",
        "owner": "*****"
    }
```

4. Create and submit a Spark batch processing job.

- API

URI format: POST /v2.0/{*project\_id*}/batches

- Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
- For details about the request parameters, see [Creating a Batch Processing Job](#).

- Request example

- Description: In the **48cc2c48765f481480c7db940d6409d1** project, create a batch processing job named **TestDemo4** in **queue1**.

- Example URL: POST <https://{{endpoint}}/v2.0/48cc2c48765f481480c7db940d6409d1/batches>

- Body:

```
{
    "sc_type": "A",
    "jars": [
        "spark-examples_2.11-2.1.0.luxor.jar"
    ],
    "driverMemory": "1G",
    "driverCores": 1,
    "executorMemory": "1G",
    "executorCores": 1,
    "numExecutors": 1,
    "queue": "cce_general",
    "file":
        "spark-examples_2.11-2.1.0.luxor.jar",
        "className":
            "org.apache.spark.examples.SparkPi",
        "minRecoveryDelayTime": 10000,
        "maxRetryTimes": 20
}
```

- Example response

```
{
    "id": "07a3e4e6-9a28-4e92-8d3f-9c538621a166",
    "appId": "",
    "name": "",
    "owner": "test1",
    "proxyUser": "",
    "state": "starting",
    "kind": "",
    "log": [],
    "sc_type": "CUSTOMIZED",
    "cluster_name": "aaa",
    "queue": "aaa",
    "create_time": 1607589874156,
    "update_time": 1607589874156
}
```

5. Query a batch job status.

- API

URI format: GET /v2.0/{*project\_id*}/batches/{*batch\_id*}/state

- Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).

- For details about the query parameters, see [Querying a Batch Job Status](#).
  - Request example
    - Description: Query the status of the batch processing job whose ID is **0a324461-d9d9-45da-a52a-3b3c7a3d809e** in the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
    - Example URL: GET `https://[endpoint]/v2.0/48cc2c48765f481480c7db940d6409d1/batches/0a324461-d9d9-45da-a52a-3b3c7a3d809e/state`
    - Body:

```
{}
```
  - Example response

```
{  
  "id": "0a324461-d9d9-45da-a52a-3b3c7a3d809e",  
  "state": "Success"  
}
```
6. Query batch job logs.
- API
    - URI format: GET `/v2.0/{project_id}/batches/{batch_id}/log`
    - Obtain the value of `{project_id}` from [Obtaining a Project ID](#).
    - For details about the query parameters, see [Querying Batch Job Logs](#).
  - Request example
    - Description: Query the background logs of the batch processing job **0a324461-d9d9-45da-a52a-3b3c7a3d809e** in the **48cc2c48765f481480c7db940d6409d1** project.
    - Example URL: GET `https://[endpoint]/v2.0/48cc2c48765f481480c7db940d6409d1/batches/0a324461-d9d9-45da-a52a-3b3c7a3d809e/log`
    - Body:

```
{}
```
  - Example response

```
{  
  "id": "0a324461-d9d9-45da-a52a-3b3c7a3d809e",  
  "from": 0,  
  "total": 3,  
  "log": [  
    "Detailed information about job logs"  
  ]  
}
```

## 4.4 Creating and Submitting a Flink Job

### Scenario Description

This section describes how to create and run a user-defined Flink job using APIs.

## Constraints

- It takes 6 to 10 minutes to start a job using a new queue for the first time.

## Involved APIs

- **Creating a Queue:** Create a queue.
- **Uploading a Package Group:** Upload the resource package required by the Flink custom job.
- **Querying Resource Packages in a Group:** Check whether the uploaded resource package is correct.
- **Creating a Flink Jar job** Create a user-defined Flink job.
- **Running Jobs in Batches:** Run a user-defined Flink job.

## Procedure

1. Create a queue for general use. For details, see [Creating a Queue](#). In the request, set **resource\_mode** to **1** to create a dedicated queue.
2. Upload the resource package of the user-defined Flink job. For details, see [2](#).
3. Query resource packages in a group. For details, see [3](#).
4. Create a custom flink job.
  - API  
URI format: POST /v1.0/{*project\_id*}/streaming/flink-jobs
    - Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
    - For details about the request parameters, see [Creating a Database](#).
  - Request example
    - Description: Create a user-defined Flink job in the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
    - Example URL: POST <https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/streaming/flink-jobs>
    - Body:

```
{  
    "name": "test",  
    "desc": "job for test",  
    "queue_name": "testQueue",  
    "manager_cu_number": 1,  
    "cu_number": 2,  
    "parallel_number": 1,  
    "tm_cus": 1,  
    "tm_slot_num": 1,  
    "log_enabled": true,  
    "obs_bucket": "bucketName",  
    "smn_topic": "topic",  
    "main_class": "org.apache.flink.examples.streaming.JavaQueueStream",  
    "restart_when_exception": false,  
    "entrypoint": "javaQueueStream.jar",  
    "entrypoint_args": "-windowSize 2000 -rate3",  
    "dependency_jars": [  
        "myGroup/test.jar",  
        "myGroup/test1.jar"  
    ],  
    "dependency_files": [  
        "myGroup/test.csv",  
        "myGroup/test1.csv"  
    ]  
}
```

```
        "myGroup/test1.csv"
    ]
}
```

- Example response

```
{
  "is_success": true,
  "message": "A Flink job is created successfully.",
  "job": {
    "job_id": 138,
    "status_name": "job_init",
    "status_desc": ""
  }
}
```

5. Run jobs in batches.

- API

URI format: POST /v1.0/{*project\_id*}/streaming/jobs/run

- Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
- For details about the request parameters, see [Running Jobs in Batches](#).

- Request example

- Description: Run the jobs whose **job\_id** is **298765** and **298766** in the project whose ID is **48cc2c48765f481480c7db940d6409d1**.
- Example URL: POST <https://{{endpoint}}/v1.0/48cc2c48765f481480c7db940d6409d1/streaming/jobs/run>
- Body:

```
{
  "job_ids": [131,130,138,137],
  "resume_savepoint": true
}
```

- Example response

```
[
  {
    "is_success": "true",
    "message": "The request for submitting DLI jobs is delivered successfully."
  },
  {
    "is_success": "true",
    "message": "The request for submitting DLI jobs is delivered successfully."
  },
  {
    "is_success": "true",
    "message": "The request for submitting DLI jobs is delivered successfully."
  },
  {
    "is_success": "true",
    "message": "The request for submitting DLI jobs is delivered successfully."
  }
]
```

## 4.5 Creating and Using a Datasource Connection

### Scenario Description

This section describes how to create an enhanced datasource connection using an API.

## Constraints

- It takes 6 to 10 minutes to start a job using a new queue for the first time.
- Before creating an enhanced datasource connection, you need to obtain the ID of the VPC and the network ID of the subnet where the service is located.

## Involved APIs

- [Creating a Queue](#): Create a dedicated queue.
- [Creating an Enhanced Datasource Connection](#): Create an enhanced datasource connection.
- [Binding a Queue](#): Bind a queue.
- [Querying an Enhanced Datasource Connection](#): Check whether an enhanced datasource connection is successfully created.

## Procedure

1. Create a queue. For details, see [Creating a Queue](#). In the request, set **resource\_mode** to **1** to create a dedicated queue.
2. Create an enhanced datasource connection.
  - API
    - URI format: POST /v2.0/{*project\_id*}/datasource/enhanced-connections
      - Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
      - For details about the request parameters, see [Creating an Enhanced Datasource Connection](#).
    - Request example
      - Description: Create an enhanced datasource connection named **test1** in project **48cc2c48765f481480c7db940d6409d1**.
      - Example URL: POST https://{{*endpoint*}}/v2.0/48cc2c48765f481480c7db940d6409d1/datasource/enhanced-connections
      - Body:

```
{  
  "name": "test1",  
  "dest_vpc_id": "22094d8f-c310-4621-913d-4c4d655d8495",  
  "dest_network_id": "78f2562a-36e4-4b39-95b9-f5aab22e1281",  
  "queues": ["q1","q2"],  
  "hosts": [  
    {  
      "ip":"192.168.0.1",  
      "name":"ecs-97f8-0001"  
    },  
    {  
      "ip":"192.168.0.2",  
      "name":"ecs-97f8-0002"  
    }  
  ]  
}
```
      - Example response

```
{  
  "is_success": true,  
  "message": "",  
}
```

- ```
        "connection_id": "2a620c33-5609-40c9-affd-2b6453071b0f"
    }
```
3. (Optional) If no queue is bound when you create an enhanced datasource connection, you can use the [Binding a Queue API](#) to bind a queue.
  4. Verify that the enhanced datasource connection is created successfully.
    - API
      - URI format: GET /v2.0/{*project\_id*}/datasource/enhanced-connections/{*connection\_id*}
      - Obtain the value of {*project\_id*} from [Obtaining a Project ID](#).
      - For details about the query parameters, see [Creating a Database](#).
    - Request example
      - Description: Query an enhanced datasource connection whose ID is **2a620c33-5609-40c9-affd-2b6453071b0f** in project **48cc2c48765f481480c7db940d6409d1**.
      - Example URL: GET <https://{{endpoint}}/v2.0/48cc2c48765f481480c7db940d6409d1/datasource/enhanced-connections/2a620c33-5609-40c9-affd-2b6453071b0f>
      - Body:

```
{}
```
    - Example response

```
{
    "is_success": true,
    "message": "",
    "name": "test1",
    "id": "2a620c33-5609-40c9-affd-2b6453071b0f",
    "available_queue_info": [
        {
            "status": "ACTIVE",
            "name": "queue1",
            "peer_id": "2a620c33-5609-40c9-affd-2b6453071b0f",
            "err_msg": "",
            "update_time": 1566889577861
        }
    ],
    "dest_vpc_id": "22094d8f-c310-4621-913d-4c4d655d8495",
    "dest_network_id": "78f2562a-36e4-4b39-95b9-f5aab22e1281",

# 5 Permission-related APIs

## 5.1 Granting Users with the Queue Usage Permission

### Function

This API is used to share a specific queue with other users. You can grant users with the permission to use the specified queue or revoke the permission.

### URI

- URI format  
`PUT /v1.0/{project_id}/queues/user-authorization`
- Parameter description

**Table 5-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 5-2** Request parameters

Parameter	Mandatory	Type	Description
queue_name	Yes	String	Name of a queue. Example value: <code>queue1</code> .

Parameter	Mandatory	Type	Description
user_name	Yes	String	Name of the user who is granted with usage permission on a queue or whose queue usage permission is revoked or updated. Example value: <b>tenant2</b> .
action	Yes	String	<p>Grants or revokes the permission. The parameter value can be <b>grant</b>, <b>revoke</b>, or <b>update</b>. Users can perform the <b>update</b> operation only when they have been granted with the <b>grant</b> and <b>revoke</b> permissions. Example value: <b>grant</b>.</p> <ul style="list-style-type: none"> <li>• <b>grant</b>: Indicates to grant users with permissions.</li> <li>• <b>revoke</b>: Indicates to revoke permissions.</li> <li>• <b>update</b>: Indicates to clear all the original permissions and assign the permissions in the provided permission array.</li> </ul>
privileges	Yes	Array of Strings	<p>List of permissions to be granted, revoked, or updated. The following permissions are supported: Example value: <b>[DROP_QUEUE, SUBMIT_JOB]</b>.</p> <ul style="list-style-type: none"> <li>• <b>SUBMIT_JOB</b>: indicates to submit a job.</li> <li>• <b>CANCEL_JOB</b>: indicates to cancel a job.</li> <li>• <b>DROP_QUEUE</b>: indicates to a delete a queue.</li> <li>• <b>GRANT_PRIVILEGE</b>: indicates to assign a permission.</li> <li>• <b>REVOKE_PRIVILEGE</b>: indicates to revoke a permission.</li> <li>• <b>SHOW_PRIVILEGES</b>: indicates to view the permissions of other users</li> <li>• <b>RESTART</b>: indicates to restart the queue.</li> <li>• <b>SCALE_QUEUE</b>: indicates to change the queue specifications.</li> </ul> <p><b>NOTE</b> If the update list is empty, all permissions of the queue granted to the user are revoked.</p>

## Response

**Table 5-3** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. Example value: <b>true</b> .
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank. Example value: left blank.

## Example Request

Grant a user the permission to submit jobs on queue1 and delete queue1.

```
{  
    "queue_name": "queue1",  
    "user_name": "tenant2",  
    "action": "grant",  
    "privileges" : ["DROP_QUEUE", "SUBMIT_JOB"]  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": ""  
}
```

## Status Codes

**Table 5-4** describes the status code.

**Table 5-4** Status codes

Status Codes	Description
200	Authorization succeeds.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 5.2 Querying Queue Users

### Function

This API is used to query names of all users who can use a specified queue.

### URI

- URI format  
GET /v1.0/{project\_id}/queues/{queue\_name}/users
- Parameter description

**Table 5-5** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	String	Name of a queue.

**Table 5-6** query parameter description

Parameter	Mandatory	Type	Description
limit	Yes	Integer	Number of records to be displayed of the page-based query.
offset	Yes	Integer	Specifies the offset of the page-based query.

### Request

None

## Response

**Table 5-7** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. Example value: <b>true</b> .
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank. Example value: left blank.
queue_name	No	String	Name of a queue. Example value: <b>queue1</b> .
privileges	No	Array of Object	Users who are granted with the permission to use this queue and the permission array to which users belong. For details, see <a href="#">Table 5-8</a> .

**Table 5-8** privileges parameters

Parameter	Mandatory	Type	Description
is_admin	No	Boolean	Whether the database user is an administrator. Example value: <b>false</b> .
user_name	No	String	Name of the user who has permission on the current queue. Example value: <b>user2</b> .
privileges	No	Array of Strings	Permission of the user on the queue. Example value: [ <b>SUBMIT_JOB</b> ].

## Example Request

None

## Example Response

```
{  
  "is_success": true,  
  "message": "",  
  "privileges": [  
    {  
      "is_admin": true,  
      "privileges": [  
        "ALL"  
      ]  
    }  
  ]  
}
```

```
        ],
        "user_name": "tenant1"
    },
    {
        "is_admin": false,
        "privileges": [
            "SUBMIT_JOB"
        ],
        "user_name": "user2"
    }
],
"queue_name": "queue1"
}
```

## Status Codes

[Table 5-9](#) describes the status code.

**Table 5-9** Status codes

Status Code	Description
200	Authorization succeeds.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 5.3 Granting Data Permission to Users

### Function

This API is used to grant database or table data usage permission to specified users.

### URI

- URI format  
PUT /v1.0/{project\_id}/user-authorization
- Parameter description

**Table 5-10** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 5-11** Request parameters

Parameter	Mandatory	Type	Description
user_name	Yes	String	Name of the user who is granted with usage permission on a queue or whose queue usage permission is revoked or updated. Example value: <b>user2</b> .
action	Yes	String	Grants or revokes the permission. The parameter value can be <b>grant</b> , <b>revoke</b> , or <b>update</b> . Example value: <b>grant</b> . <ul style="list-style-type: none"><li>● <b>grant</b>: Indicates to grant users with permissions.</li><li>● <b>revoke</b>: Indicates to revoke permissions.</li><li>● <b>update</b>: Indicates to clear all the original permissions and assign the permissions in the provided permission array.</li></ul> <p><b>NOTE</b> Users can perform the <b>update</b> operation only when they have been granted with the <b>grant</b> and <b>revoke</b> permissions.</p>
privileges	Yes	Array of Objects	Permission granting information. For details, see <a href="#">Table 5-12</a> . Example value: <code>[ {"object": "databases.db1.tables.tb2.columns.column1", "privileges": ["SELECT"]}, {"object": "databases.db1.tables.tbl", "privileges": [ "DROP_TABLE"]}</code>

**Table 5-12** privileges parameters

Parameter	Mandatory	Type	Description
object	Yes	String	<p>Data objects to be assigned. If they are named:</p> <ul style="list-style-type: none"><li>• <b>databases.</b><i>Database name</i>, data in the entire database will be shared.</li><li>• <b>databases.</b><i>Database name.tables.</i><i>Table name</i>, data in the specified table will be shared.</li><li>• <b>databases.</b><i>Database name.tables.</i><i>Table name.columns.</i><i>Column name</i>, data in the specified column will be shared.</li><li>• <b>jobs.flink.</b><i>Flink job ID</i>, data the specified job will be shared.</li><li>• <b>groups.</b><i>Package group name</i>, data in the specified package group will be shared.</li><li>• <b>resources.</b><i>Package name</i>, data in the specified package will be shared.</li></ul> <p>Example value: <b>databases.db1.tables.tb2.columns.column1.</b></p>
privileges	Yes	Array of Strings	<p>List of permissions to be granted, revoked, or updated. Example value: [SELECT].</p> <p><b>NOTE</b> If Action is <b>Update</b> and the update list is empty, all permissions of the user in the database or table are revoked.</p>

## Response

**Table 5-13** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. Example value: <b>true</b> .
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank. Example value: left blank.

## Example Request

Grant **user2** the permission to query data in the database **db1**, delete the data table **db1.tbl**, and query data in a specified column **db1.tbl.column1** of a data table.

```
{  
  "user_name": "user2",  
  "action": "grant",  
  "privileges": [  
    {  
      "object": "databases.db1.tables.tb2.columns.column1",  
      "privileges": [  
        "SELECT"  
      ]  
    },  
    {  
      "object": "databases.db1.tables.tbl",  
      "privileges": [  
        "DROP_TABLE"  
      ]  
    },  
    {  
      "object": "databases.db1",  
      "privileges": [  
        "SELECT"  
      ]  
    }  
  ]  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": ""  
}
```

## Status Codes

[Table 5-14](#) describes the status code.

**Table 5-14** Status codes

Status Code	Description
200	Authorization succeeds.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 5.4 Querying Database Users

### Function

This API is used query names of all users who have permission to use or access the database.

## URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/users
- Parameter description

**Table 5-15** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	Name of the database to be queried.

## Request

None

## Response

**Table 5-16** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. Example value: <b>true</b> .
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank. Example value: left blank.
database_name	No	String	Name of the database to be queried. Example value: <b>dsstest</b> .
privileges	No	Array of objects	Permission information. For details, see <a href="#">Table 5-17</a> .

**Table 5-17 privileges parameters**

Parameter	Mandatory	Type	Description
is_admin	No	Boolean	Whether the database user is an administrator. Example value: <b>true</b> .
user_name	No	String	Name of the user who has permission on the current database. Example value: <b>test</b> .
privileges	No	Array of Strings	Permission of the user on the database. Example value: <b>[ALTER_TABLE_ADD_PARTITION]</b> .

## Example Request

None

## Example Response

```
{  
  "is_success": true,  
  "message": "",  
  "database_name": "dsstest",  
  "privileges": [  
    {  
      "is_admin": true,  
      "privileges": [  
        "ALL"  
      ],  
      "user_name": "test"  
    },  
    {  
      "is_admin": false,  
      "privileges": [  
        "ALTER_TABLE_ADD_PARTITION"  
      ],  
      "user_name": "scuser1"  
    },  
    {  
      "is_admin": false,  
      "privileges": [  
        "CREATE_TABLE"  
      ],  
      "user_name": "scuser2"  
    }  
  ]  
}
```

### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 5.5 Querying Table Users

### Function

This API is used to query users who have permission to access the specified table or column in the table.

### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/tables/{table\_name}/users
- Parameter description

**Table 5-18** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	Name of the database where the table to be queried resides.
table_name	Yes	Name of a table that is to be queried.

### Request

None

### Response

**Table 5-19** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
privileges	No	Array <Objects>	Permission information. For details, see <a href="#">Table 5-20</a> .

**Table 5-20 privileges parameters**

Parameter	Mandatory	Type	Description
is_admin	No	Boolean	Determines whether a user is an administrator. The value <b>false</b> indicates that the user is not an administrator, and the value <b>true</b> indicates that the user is an administrator.
object	No	String	Objects on which a user has permission. <ul style="list-style-type: none"><li>• If the object is in the format of <b>databases.Database name.tables.Table name</b>, the user has permission on the database.</li><li>• If the object is in the format of <b>databases.Database name.tables.Table namecolumns.Column name</b>, the user has permission on the table.</li></ul>
privileges	No	Array<String>	Permission of the user on the object.
user_name	No	String	Name of the user who has the permission.

## Example Request

None

## Example Response

```
{  
  "is_success": true,  
  "message": "",  
  "privileges": [  
    {  
      "is_admin": false,  
      "object": "databases.dsstest.tables.csv_par_table",  
      "privileges": [  
        "SELECT"  
      ],  
      "user_name": "tent2"  
    },  
    {  
      "is_admin": true,  
      "object": "databases.dsstest.tables.csv_par_table",  
      "privileges": [  
        "ALL"  
      ],  
      "user_name": "tent4"  
    }  
  ]  
}
```

**NOTE**

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 5.6 Querying a User's Table Permissions

### Function

This API is used to query the permission of a specified user on a table.

### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/tables/{table\_name}/users/{user\_name}
- Parameter description

**Table 5-21** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of the database where the table to be queried resides.
table_name	Yes	String	Name of a table that is to be queried.
user_name	Yes	String	Name of the user whose permission is to be queried.

### Request

None

### Response

**Table 5-22** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. Example value: <b>true</b> .

Parameter	Mandatory	Type	Description
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank. Example value: left blank.
user_name	No	String	Name of the user whose permission is to be queried.
privileges	No	Array Of objects	Permission information. For details, see <a href="#">Table 5-23</a> .

**Table 5-23** privileges parameters

Parameter	Mandatory	Type	Description
object	No	String	<p>Objects on which a user has permission.</p> <ul style="list-style-type: none"> <li>If the object is in the format of <b>databases.Database name.tables.Table name</b>, the user has permission on the database.</li> <li>If the object is in the format of <b>databases.Database name.tables.Table namecolumns.Column name</b>, the user has permission on the table.</li> </ul> <p>Example value: <b>databases.dsstest.tables.obs_231</b>.</p>
privileges	No	Array of Strings	Permission of the user on a specified object. Example value: [DESCRIBE_TABLE].

## Example Request

None

## Example Response

```
{
  "is_success": true,
  "message": "",
  "privileges": [
    {
      "object": "databases.dsstest.tables.obs_2312",
      "privileges": [
        "DESCRIBE_TABLE"
      ]
    },
    {
      "object": "databases.dsstest.tables.obs_2312.columns.id",
      "privileges": [
        "SELECT"
      ]
    }
  ]
}
```

```
        }  
    ],  
    "user_name": "scuser1"  
}
```

## Status Codes

[Table 5-24](#) describes the status code.

**Table 5-24** Status codes

Status Code	Description
200	Authorization succeeds.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 5.7 Viewing the Granted Permissions of a User

## Function

This API is used to view the permissions granted to a user.

## URI

- URI format  
GET /v1.0/{project\_id}/authorization/privileges
- Parameter descriptions:

**Table 5-25** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 5-26** query parameter description

Parameter	Mandatory	Type	Description
object	Yes	String	<p>Data object to be assigned, which corresponds to the <b>object</b> in API permission assignment.</p> <ul style="list-style-type: none"><li>• <b>jobs.flink.Flink job ID</b>, data in the specified job will be queried.</li><li>• <b>groups. Package group name</b>, data in the specified package group will be queried.</li><li>• <b>resources.Package name</b>, data in the specified package will be queried.</li></ul> <p><b>NOTE</b> When you view the packages in a group, the <b>object</b> format is <b>resources.package group name/package name</b>.</p>
offset	No	Integer	Specifies the offset of the page-based query.
limit	No	Integer	Number of records to be displayed of the page-based query.

 **NOTE**

The following is an example of the URL containing the **query** parameter:

GET /v1.0/{project\_id}/authorization/privileges?object={object}

## Request

None

## Response

**Table 5-27** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	Yes	String	Indicates the system prompt. If execution succeeds, this parameter may be left blank.
object_name	Yes	String	Object name.

Parameter	Mandatory	Type	Description
object_type	Yes	String	Object type.
privileges	No	Array of Object	Permission information. For details, see <a href="#">Table 5-28</a> .
count	No	Integer	Total number of permissions.

**Table 5-28** privileges parameters

Parameter	Mandatory	Type	Description
is_admin	No	Boolean	Whether the database user is an administrator.
user_name	No	String	Name of the user who has permission on the current database.
privileges	No	Array of Strings	Permission of the user on the database.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "object_name": "9561",  
    "object_type": "flink",  
    "count": 2,  
    "privileges": [  
        {  
            "user_name": "testuser1",  
            "is_admin": true,  
            "privileges": [  
                "ALL"  
            ]  
        },  
        {  
            "user_name": "user1",  
            "is_admin": false,  
            "privileges": [  
                "GET"  
            ]  
        }  
    ]  
}
```

## Status Codes

[Table 5-29](#) describes the status code.

**Table 5-29** Status codes

Status Code	Description
200	Authorization succeeds.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 5-30** Error codes

Error Code	Error Message
DLI.0001	user input validation failed, object_type sql or saprk is not supported now

# 6 Queue-related APIs (Recommended)

## 6.1 Creating a Queue

### Function

This API is used to create a queue. The queue will be bound to specified compute resources.

#### NOTE

It takes 5 to 15 minutes to start a job using a new queue for the first time.

### URI

- URI format  
POST /v1.0/{project\_id}/queues
- Parameter description

**Table 6-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 6-2** Request parameters

Parameter	Mandatory	Type	Description
queue_name	Yes	String	Name of a newly created resource queue. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_). Length range: 1 to 128 characters. <b>NOTE</b> The queue name is case-insensitive. The uppercase letters will be automatically converted to lowercase letters.
queue_type	No	String	Queue type. The options are as follows: <ul style="list-style-type: none"><li>• <b>sql</b>: Queues used to run SQL jobs</li><li>• <b>general</b>: Queues used to run Flink and Spark Jar jobs.</li></ul> <b>NOTE</b> If the type is not specified, the default value <b>sql</b> is used.
description	No	String	Description of a queue.
cu_count	Yes	Integer	Minimum number of CUs that are bound to a queue. Currently, the value can only be <b>16</b> , <b>64</b> , or <b>256</b> .
enterprise_project_id	No	String	Enterprise project ID. The value <b>0</b> indicates the default enterprise project. <b>NOTE</b> Users who have enabled Enterprise Management can set this parameter to bind a specified project.
platform	No	String	CPU architecture of compute resources. <ul style="list-style-type: none"><li>• <b>x86_64</b></li></ul>
resource_mode	No	Integer	Queue resource mode. The options are as follows: <b>0</b> : shared resource mode <b>1</b> : dedicated resource mode
labels	No	Array of Strings	Tag information of the queue to be created. Currently, the tag information includes whether the queue is cross-AZ (JSON string). The value can only be <b>2</b> , that is, a dual-AZ queue whose compute resources are distributed in two AZs is created.

Parameter	Mandatory	Type	Description
tags	No	Array of Objects	Queue tags for identifying cloud resources. A tag consists of a key and tag value. For details, see <a href="#">Table 6-3</a> .

**Table 6-3** tags parameters

Parameter	Mandatory	Type	Description
Key	Yes	String	Tag key. <b>NOTE</b> A tag key can contain a maximum of 36 characters. Special characters (=<>\ ) are not allowed, and the key cannot start with a space.
value	Yes	String	Tag value. <b>NOTE</b> A tag value can contain a maximum of 43 characters. Special characters (=<>\ ) are not allowed, and the value cannot start with a space.

## Response

**Table 6-4** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
queue_name	No	String	Name of the created queue. <b>NOTE</b> The queue name is case-insensitive. The uppercase letters will be automatically converted to lowercase letters.

## Example Request

Create a dedicated general-purpose queue named **queue1**, with specifications of 16 CUs and compute resources distributed in two AZs.

```
{  
    "queue_name": "queue1",
```

```
    "description": "test",
    "cu_count": 16,
    "resource_mode": 1,
    "queue_type": "general",
    "labels": ["multi_az=2"]
}
```

## Example Response

```
{
  "is_success": true,
  "message": "",
  "queue_name": "queue1"
}
```

## Status Codes

[Table 6-5](#) describes the status code.

**Table 6-5** Status codes

Status Code	Description
200	The job is created successfully.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 6.2 Deleting a Queue

### Function

This API is used to delete a specified queue.

#### NOTE

If a task is being executed in a specified queue, the queue cannot be deleted.

### URI

- URI format  
`DELETE /v1.0/{project_id}/queues/{queue_name}`
- Parameter description

**Table 6-6** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	String	Name of a queue to be deleted.

## Request

None

## Response

**Table 6-7** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

None

## Example Response

```
{  
  "is_success": true,  
  "message": ""  
}
```

## Status Codes

[Table 6-8](#) describes the status code.

**Table 6-8** Status codes

Status Code	Description
200	Deletion succeeded.
400	Request error.

Status Code	Description
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 6.3 Querying All Queues

### Function

This API is used to list all queues under the project.

### URI

- URI format  
GET/v1.0/{project\_id}/queues
- Parameter description

**Table 6-9** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 6-10** query parameter description

Parameter	Mandatory	Type	Description
queue_type	No	String	Type of the queue. The options are as follows: <ul style="list-style-type: none"><li><b>sql</b>: queues for SQL jobs</li><li><b>general</b>: queues for Flink and Spark Jar jobs</li><li><b>all</b>: queues of all types</li></ul> If this parameter is not specified, the default value <b>sql</b> is used.

Parameter	Mandatory	Type	Description
with-priv	No	Boolean	Whether to return permission information.
page-size	No	Integer	Maximum number of lines displayed on each page. The default value is <b>Integer.MAX_VALUE</b> , indicating that all results are displayed on one page.
current-page	No	Integer	Current page number. The default value is <b>1</b> .
order	No	String	Filed based on which queues are ordered  The default value is <b>queue_name_asc</b> (alphabetically ascending order on queue names). Other options are <b>queue_name_desc</b> (alphabetically descending order on queue names), <b>cu_asc</b> (ascending order on CUs), and <b>cu_desc</b> (descending order on CUs).
tags	No	String	Query results are filtered by tag.

## Request

None

## Response

**Table 6-11** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
queues	No	Array of Object	Queue information For details, see <a href="#">Table 6-12</a> .

**Table 6-12 queues** parameters description

Parameter	Mandatory	Type	Description
queue_name	No	String	Name of a queue.
description	No	String	Queue description.
owner	No	String	User who creates a queue.
create_time	No	Long	Time when the queue is created. The timestamp is expressed in milliseconds.
queue_type	No	String	Queue type. <ul style="list-style-type: none"><li>• sql</li><li>• general</li><li>• all</li></ul> If this parameter is not specified, the default value <b>sql</b> is used.
cu_count	No	Integer	Number of compute units (CUs) bound to a queue, that is, the number of CUs in the current queue.
resource_id	No	String	Resource ID of a queue.
enterprise_project_id	No	String	Enterprise project ID. <b>0</b> indicates the default enterprise project. <b>NOTE</b> Users who have enabled Enterprise Management can set this parameter to bind a specified project.
cidr_in_vpc	No	String	The VPC CIDR block of the queue.
cidr_in_mgmt_subnet	No	String	CIDR block of the management subnet
cidr_in_subnet	No	String	Subnet CIDR block
resource_mode	No	Integer	Resource mode <ul style="list-style-type: none"><li>• 0: Shared queue</li><li>• 1: Dedicated queue</li></ul>
platform	No	String	CPU architecture of queue compute resources. <ul style="list-style-type: none"><li>• x86_64</li></ul>
is_restarting	No	Boolean	Whether to restart the queue. The default value is <b>false</b> .

Parameter	Mandatory	Type	Description
labels	No	String	Tag information of the queue to be created, including the JSON string indicating whether the queue is Dual-AZ. Currently, only the value <b>2</b> is supported, indicating that two queues are created.
cu_spec	No	Integer	Specifications of a queue.
cu_scale_out_limit	No	Integer	Upper limit of the CU value for elastic scaling of the current queue.
cu_scale_in_limit	No	Integer	Lower limit of the CU value for elastic scaling of the current queue.

## Example Request

None

## Example Response

```
{  
    "is_success": "true",  
    "message": "",  
    "queues": [  
        {  
            "queue_name": "test",  
            "owner": "testuser",  
            "description": "",  
            "create_time": 1562221422671,  
            "queue_type": "spark",  
            "cu_count": 16,  
            "resource_id": "26afb850-d3c9-42c1-81c0-583d1163e80f",  
            "cidr_in_vpc": "10.0.0.0/8",  
            "cidr_in_subnet": "10.0.0.0/24",  
            "cidr_in_mngntsubnet": "10.23.128.0/24",  
            "resource_mode": 1,  
            "platform": "x86_64",  
            "is_restarting": "false",  
            "labels": "multi_az=2",  
            "resource_type": "vm",  
            "cu_spec": 16  
        }  
    ]  
}
```

## Status Codes

[Table 6-13](#) describes the status code.

**Table 6-13** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 6.4 Viewing Details of a Queue

### Function

This API is used to list details of a specific queue in a project.

### URI

- URI format  
GET /v1.0/{project\_id}/queues/{queue\_name}
- Parameter description

**Table 6-14** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	String	Specifies the name of a queue to be queried. <b>NOTE</b> The queue name is case-insensitive. The uppercase letters will be automatically converted to lowercase letters.

### Request

None

## Response

**Table 6-15** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
queueName	No	String	Name of a queue. <b>NOTE</b> The queue name is case-insensitive. The uppercase letters will be automatically converted to lowercase letters.
description	No	String	Queue description.
owner	No	String	User who creates a queue.
create_time	No	Long	Time when the queue is created. The timestamp is expressed in milliseconds.
queueType	No	String	Indicates the queue type. <ul style="list-style-type: none"><li>• sql</li><li>• general</li><li>• all</li></ul> If this parameter is not specified, the default value <b>sql</b> is used.
cuCount	No	Integer	Number of compute units (CUs) bound to a queue, that is, the number of CUs in the current queue.
resource_id	No	String	Resource ID of a queue.
resource_mode	No	Integer	Resource mode <ul style="list-style-type: none"><li>• 0: Shared queue</li><li>• 1: Dedicated queue</li></ul>
enterprise_project_id	No	String	Enterprise project ID. <b>0</b> indicates the default enterprise project. <b>NOTE</b> Users who have enabled Enterprise Management can set this parameter to bind a specified project.
cu_spec	No	Integer	Specifications of a queue.

Parameter	Mandatory	Type	Description
cu_scale_out_limit	No	Integer	Upper limit of the CU value for elastic scaling of the current queue.
cu_scale_in_limit	No	Integer	Lower limit of the CU value for elastic scaling of the current queue.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "owner": "testuser",  
    "description": "",  
    "queueName": "test",  
    "create_time": 1587613028851,  
    "queueType": "general",  
    "cuCount": 16,  
    "resource_id": "03d51b88-db63-4611-b779-9a72ba0cf58b",  
    "resource_mode": 0  
}  
,  
    "resource_type": "vm",  
    "cu_spec": 16  
}
```

## Status Codes

[Table 6-16](#) describes the status code.

**Table 6-16** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 6.5 Restarting, Scaling Out, and Scaling In Queues

### Function

This API is used to restart, scale out, and scale in queues.

Only SQL queues in the **Available** status can be restarted. (The queue status is **Available** only after the SQL job is successfully executed.)

### URI

- URI format  
`PUT /v1.0/{project_id}/queues/{queue_name}/action`
- Parameter description

**Table 6-17** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	String	Name of a queue.

### Request

**Table 6-18** Request parameters

Parameter	Mandatory	Type	Description
action	Yes	String	<p>Operations to be performed:</p> <ul style="list-style-type: none"><li>• <b>restart</b>: Restart a service. Only queues for SQL jobs can be restarted.</li><li>• <b>scale_out</b>: Scale out the queue</li><li>• <b>scale_in</b>: Scale in the queue</li></ul> <p><b>NOTE</b> Currently, only <b>restart</b>, <b>scale_out</b>, and <b>scale_in</b> operations are supported.</p>
force	No	Boolean	Specifies whether to forcibly restart the queue. This parameter is optional when <b>action</b> is set to <b>restart</b> . The default value is <b>false</b> .

Parameter	Mandatory	Type	Description
cu_count	No	Integer	Number of CUs to be scaled in or out. This parameter is optional when <b>action</b> is set to <b>scale_out</b> or <b>scale_in</b> . The value of <b>cu_count</b> must be a multiple of 16.

## Response

**Table 6-19** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	Specifies the job ID returned when <b>force</b> is set to <b>true</b> .
queue_name	No	String	Name of the queue to be scaled in or out.
result	No	Boolean	Indicates the scaling result.

## Example Request

- Restart a queue.

```
{  
  "action": "restart",  
  "force": "false"  
}
```
- Increase the number of CUs of the queue to 16.

```
{  
  "action": "scale_out",  
  "cu_count": 16  
}
```

## Example Response

- Set **force** to **false**.

```
{  
  "is_success": true,  
  "message": "Restart success"  
}
```
- Set **force** to **true**.

```
{  
  "is_success": true,  
  "message": "Scaling successful"  
}
```

- ```
        "message": "Submit restart job success, it need some time to cancel jobs, please wait for a while  
and check job status",  
        "job_id": "d90396c7-3a25-4944-ad1e-99c764d902e7"  
    }  
● Scaling  
{  
    "queue_name": "myQueue",  
    "result": true  
}
```

## Status Codes

[Table 6-20](#) describes the status code.

**Table 6-20** Status codes

| Status Code | Description                  |
|-------------|------------------------------|
| 200         | The operation is successful. |
| 400         | Request error.               |
| 500         | Internal service error.      |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 6-21** Error codes

| Error Code | Error Message                                                                                |
|------------|----------------------------------------------------------------------------------------------|
| DLI.0015   | Token info for token is null, return.                                                        |
| DLI.0013   | X-Auth-Token is not defined in request. It is mandatory. Please define and send the request. |

## 6.6 Creating a Scheduled CU Change

### Function

This API is used to create a scheduled CU change, that is, to create a scheduled CU change for a specified queue.

### URI

- URI format  
POST /v1/{project\_id}/queues/{queue\_name}/plans

- Parameter description

**Table 6-22** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                                                                                                  |
|------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .                                                                                                    |
| queue_name | Yes       | String | Name of the queue for which you want to set a scheduled scaling plan. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_). The name contains 1 to 128 characters. |

## Request

**Table 6-23** Request parameters

| Parameter        | Mandatory | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------|-----------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| plan_name        | Yes       | String           | Name of a CU change. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_).                                                                                                                                                                                                                                         |
| target_cu        | Yes       | Integer          | Target value of the CU in the scheduled CU change.                                                                                                                                                                                                                                                                                                                                           |
| start_hour       | Yes       | Integer          | Specifies the start hour of the scheduled CU change.                                                                                                                                                                                                                                                                                                                                         |
| start_minute     | Yes       | Integer          | Specifies the start minute of a scheduled CU change.                                                                                                                                                                                                                                                                                                                                         |
| repeat_day       | Yes       | Array of strings | Specifies the repetition period of a scheduled CU change. You can select one or more days from Monday to Sunday, or do not select any day. If this parameter is not specified, the scheduled CU change will be executed at the time specified by <b>start_hour: start_minute</b> after the current time. Example:<br><code>"repeat_day": ["MONDAY", "TUESDAY", "WEDNESDAY", "SUNDAY"]</code> |
| valid_date_begin | No        | Long             | Start time of the validity period (13-digit timestamp)                                                                                                                                                                                                                                                                                                                                       |

| Parameter      | Mandatory | Type    | Description                                                                                                                         |
|----------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------|
| valid_date_end | No        | Long    | End time of the validity period (13-digit timestamp)                                                                                |
| activate       | No        | Boolean | Indicates whether the scheduled CU change is activated. The default value is <b>true</b> , indicating that the change is activated. |

## Response

**Table 6-24** Response parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                    |
|------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | No        | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                 |

## Example Request

Create a scaling plan named **plan\_A** for the queue. According to the plan, the queue is scaled out at 20:30 on Monday, Tuesday, Wednesday, and Sunday, to 64 CUs.

```
{  
    "plan_name": "plan_A",  
    "target_cu": 64,  
    "start_hour": 20,  
    "start_minute": 30,  
    "repeat_day": [  
        "MONDAY",  
        "TUESDAY",  
        "WEDNESDAY",  
        "SUNDAY"  
    ],  
    "valid_date_begin": 1590949800000,  
    "valid_date_end": 1591727400000,  
    "activate": true  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": ""  
}
```

## Status Codes

[Table 6-25](#) describes status codes.

**Table 6-25** Status codes

| Status Code | Description                               |
|-------------|-------------------------------------------|
| 200         | Scheduled CU change created successfully. |
| 400         | Request failure.                          |
| 500         | Internal service error.                   |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 6-26** Error codes

| Error Code | Error Message                                                                                                          |
|------------|------------------------------------------------------------------------------------------------------------------------|
| DLI.0999   | Queue plans create failed. The plan plan_A can not generate a scale plan, please check all time settings for the plan. |

## 6.7 Viewing a Scheduled CU Change

### Function

This API is used to query the scheduled CU changes and list the changes of a specified queue.

### URI

- URI format  
GET /v1/{project\_id}/queues/{queue\_name}/plans
- Parameter description

**Table 6-27** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                   |
|------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .                     |
| queue_name | Yes       | String | Name of the queue for which the scheduled CU change is to be deleted. The name contains 1 to 128 characters. Use commas (,) to separate multiple queue names. |

## Request

None

## Response

**Table 6-28** Response parameters

| Parameter  | Mandatory | Type             | Description                                                                                                                    |
|------------|-----------|------------------|--------------------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean          | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | No        | String           | System prompt. If execution succeeds, the parameter setting may be left blank.                                                 |
| plans      | No        | Array of Objects | Scheduled scaling plan information. For details, see <a href="#">Table 6-29</a> .                                              |

**Table 6-29** plans parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                                          |
|------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| id         | No        | Long    | ID of a scheduled CU change.                                                                                                                         |
| plan_name  | No        | String  | Name of a CU change. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_). |
| target_cu  | No        | Integer | Target value of the CU in the scheduled CU change.                                                                                                   |
| start_hour | No        | Integer | Start hour of a queue scaling plan, in the 24-hour format.                                                                                           |

| Parameter         | Mandatory | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------|-----------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| start_minute      | No        | Integer          | Specifies the start minute of a scheduled CU change.                                                                                                                                                                                                                                                                                                                                       |
| repeat_day        | Yes       | Array of strings | Specifies the repetition period of a scheduled CU change. You can select one or more days from Monday to Sunday, or do not select any day. If this parameter is not specified, the scheduled CU change will be executed at the time specified by <b>start_hour</b> : <b>start_minute</b> after the current time.<br>Example:<br>"repeat_day": ["MONDAY", "TUESDAY", "WEDNESDAY", "SUNDAY"] |
| valid_date_begin  | No        | Long             | Start time of the validity period (13-digit timestamp)                                                                                                                                                                                                                                                                                                                                     |
| valid_date_end    | No        | Long             | End time of the validity period (13-digit timestamp)                                                                                                                                                                                                                                                                                                                                       |
| activate          | No        | Boolean          | Indicates whether the scheduled CU change is activated. The default value is <b>true</b> , indicating that the change is activated.                                                                                                                                                                                                                                                        |
| last_execute_time | No        | Long             | Time when the scaling plan was last executed.                                                                                                                                                                                                                                                                                                                                              |

## Status Codes

[Table 6-30](#) describes status codes.

**Table 6-30** Status codes

| Status Code | Description              |
|-------------|--------------------------|
| 200         | The query is successful. |
| 400         | Request failure.         |
| 500         | Internal service error.  |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 6-31** Error codes

| Error Code | Error Message                   |
|------------|---------------------------------|
| DLI.0008   | There is no queue named queue1. |

## 6.8 Deleting Scheduled CU Changes in Batches

### Function

This API is used to delete scheduled CU changes in batches.

### URI

- URI format

POST /v1/{project\_id}/queues/{queue\_name}/plans/batch-delete

- Parameter description

**Table 6-32** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                   |
|------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .                     |
| queue_name | Yes       | String | Name of the queue for which the scheduled CU change is to be deleted. The name contains 1 to 128 characters. Use commas (,) to separate multiple queue names. |

## Request

**Table 6-33** Request parameters

| Parameter | Mandatory | Type          | Description                                                                                                                                       |
|-----------|-----------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| plan_ids  | Yes       | Array of Long | Scaling policy IDs of the queues you want to delete. For details, see <a href="#">Viewing a Scheduled CU Change</a> . Example: "plan_ids": [8,10] |

## Response

**Table 6-34** Response parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                    |
|------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | No        | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                 |

## Example Request

Delete the scaling plans whose IDs are 3 and 4.

```
{  
  "plan_ids": [3,4]  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": ""  
}
```

## Status Codes

[Table 6-35](#) describes status codes.

**Table 6-35** Status codes

| Status Code | Description             |
|-------------|-------------------------|
| 200         | Deletion succeeded.     |
| 400         | Request failure.        |
| 500         | Internal service error. |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 6-36** Error codes

| Error Code | Error Message                        |
|------------|--------------------------------------|
| DLI.0002   | The plans with id 8, 9 do not exist. |

## 6.9 Deleting a Scheduled CU Change

### Function

This API is used to delete a scheduled CU change for a queue with a specified ID.

### URI

- URI format  
`DELETE /v1/{project_id}/queues/{queue_name}/plans/{plan_id}`
- Parameter description

**Table 6-37** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                   |
|------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .                     |
| queue_name | Yes       | String | Name of the queue for which the scheduled CU change is to be deleted. The name contains 1 to 128 characters. Use commas (,) to separate multiple queue names. |
| plan_id    | Yes       | Long   | ID of scheduled CU change to be deleted. For details about how to obtain the IDs, see <a href="#">Viewing a Scheduled CU Change</a> .                         |

## Request

None

## Response

**Table 6-38** Response parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                    |
|------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | No        | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                 |

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": ""  
}
```

## Status Codes

**Table 6-39** describes status codes.

**Table 6-39** Status codes

| Status Code | Description                            |
|-------------|----------------------------------------|
| 200         | The directory is successfully deleted. |
| 400         | Request failure.                       |
| 500         | Internal service error.                |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 6-40** Error codes

| Error Code | Error Message                      |
|------------|------------------------------------|
| DLI.0002   | The plan with id 8 does not exist. |

## 6.10 Modifying a Scheduled CU Change

### Function

This API is used to modify a scheduled CU change for a queue with a specified ID.

### URI

- URI format  
`PUT /v1/{project_id}/queues/{queue_name}/plans/{plan_id}`
- Parameter description

**Table 6-41** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                    |
|------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .                      |
| queue_name | Yes       | String | Name of the queue for which the scheduled CU change is to be modified. The name contains 1 to 128 characters. Use commas (,) to separate multiple queue names. |

| Parameter | Mandatory | Type   | Description                                                                                                                                                                     |
|-----------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| plan_id   | Yes       | String | ID of scheduled CU change to be modified. Use commas (,) to separate multiple IDs. For details about how to obtain the IDs, see <a href="#">Viewing a Scheduled CU Change</a> . |

## Request

**Table 6-42** Request parameters

| Parameter        | Mandatory | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------|-----------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| plan_name        | Yes       | String           | Name of a CU change. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_).                                                                                                                                                                                                                                         |
| target_cu        | Yes       | Integer          | Target value of the CU in the scheduled CU change.                                                                                                                                                                                                                                                                                                                                           |
| start_hour       | Yes       | Integer          | Specifies the start hour of the scheduled CU change.                                                                                                                                                                                                                                                                                                                                         |
| start_minute     | Yes       | Integer          | Specifies the start minute of a scheduled CU change.                                                                                                                                                                                                                                                                                                                                         |
| repeat_day       | Yes       | Array of strings | Specifies the repetition period of a scheduled CU change. You can select one or more days from Monday to Sunday, or do not select any day. If this parameter is not specified, the scheduled CU change will be executed at the time specified by <b>start_hour: start_minute</b> after the current time. Example:<br><code>"repeat_day": ["MONDAY", "TUESDAY", "WEDNESDAY", "SUNDAY"]</code> |
| valid_date_begin | No        | Long             | Start time of the validity period (13-digit timestamp)                                                                                                                                                                                                                                                                                                                                       |
| valid_date_end   | No        | Long             | End time of the validity period (13-digit timestamp)                                                                                                                                                                                                                                                                                                                                         |
| activate         | No        | Boolean          | Indicates whether the scheduled CU change is activated. The default value is <b>true</b> , indicating that the change is activated.                                                                                                                                                                                                                                                          |

## Response

**Table 6-43** Response parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                                                    |
|------------|-----------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.                                 |
| message    | No        | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                                                 |
| queue_name | No        | String  | Name of the queue for which the scheduled CU change is to be modified. The name contains 1 to 128 characters. Use commas (,) to separate multiple queue names. |
| plan_id    | No        | String  | ID of scheduled CU change to be modified. Use commas (,) to separate multiple IDs.                                                                             |

## Example Request

Modify the scaling plan named **plan\_A**. After the modification, the number of CUs of the queue is scaled to 64 at 19:30 on Thursday and Friday, and the scaling plan is not activated.

```
{  
    "plan_name": "plan_A",  
    "target_cu": 64,  
    "start_hour": 19,  
    "start_minute": 30,  
    "repeat_day": ["THURSDAY", "FRIDAY"],  
    "activate": false  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "queue_name": "queue1",  
    "plan_id": 3  
}
```

## Status Codes

**Table 6-44** describes status codes.

**Table 6-44** Status codes

| Status Code | Description                                 |
|-------------|---------------------------------------------|
| 200         | The modification operations are successful. |

| Status Code | Description             |
|-------------|-------------------------|
| 400         | Request failure.        |
| 500         | Internal service error. |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 6-45** Error codes

| Error Code   | Error Message                                                                                                          |
|--------------|------------------------------------------------------------------------------------------------------------------------|
| DLI.09<br>99 | Queue plans create failed. The plan plan_A can not generate a scale plan, please check all time settings for the plan. |

# 7 SQL Job related APIs

## 7.1 Submitting a SQL Job (Recommended)

### Function

This API is used to submit jobs to a queue using SQL statements.

The job types support DDL, DCL, IMPORT, QUERY, and INSERT. The IMPORT function is the same as that described in [Importing Data](#). The difference lies in the implementation method.

Additionally, you can use other APIs to query and manage jobs. For details, see the following sections:

- [Querying Job Status](#)
- [Querying Job Details](#)
- [Querying the Job Execution Result-Method 2 \(Discarded\)](#)
- [Exporting Query Results](#)
- [Querying All Jobs](#)
- [Canceling a Job \(Recommended\)](#)

This API is synchronous if `job_type` in the response message is **DCL**.

### URI

- URI format  
POST /v1.0/{project\_id}/jobs/submit-job
- Parameter description

**Table 7-1** URI parameter

| Parameter  | Mandatory | Type   | Description                                                                                                                               |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> . |

## Request

**Table 7-2** Request parameters

| Parameter  | Mandatory | Type             | Description                                                                                                                                                                               |
|------------|-----------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sql        | Yes       | String           | SQL statement that you want to execute.                                                                                                                                                   |
| currentdb  | No        | String           | Database where the SQL statement is executed. This parameter does not need to be configured during database creation.                                                                     |
| queue_name | No        | String           | Name of the queue to which a job to be submitted belongs. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_). |
| conf       | No        | Array of Strings | You can set the configuration parameters for the SQL job in the form of <b>Key/Value</b> . For details about the supported configuration items, see <a href="#">Table 7-3</a> .           |
| tags       | No        | Array of Objects | Label of a job. For details, see <a href="#">Table 7-4</a> .                                                                                                                              |

**Table 7-3** Configuration parameters description

| Parameter                         | Default Value | Description                                                                                                      |
|-----------------------------------|---------------|------------------------------------------------------------------------------------------------------------------|
| spark.sql.files.maxRecordsPerFile | 0             | Maximum number of records to be written into a single file. If the value is zero or negative, there is no limit. |

| Parameter                                   | Default Value | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spark.sql.autoBroadcastJoinThreshold        | 20971520      | <p>Maximum size of the table that displays all working nodes when a connection is executed. You can set this parameter to <b>-1</b> to disable the display.</p> <p><b>NOTE</b><br/>Currently, only the configuration unit metastore table that runs the <b>ANALYZE TABLE COMPUTE statistics noscan</b> command and the file-based data source table that directly calculates statistics based on data files are supported.</p>                                                                                                                       |
| spark.sql.shuffle.partitions                | 200           | Default number of partitions used to filter data for join or aggregation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| spark.sql.dynamicPartitionOverwrite.enabled | false         | <p>Whether DLI overwrites the partitions where data will be written into during runtime. If you set this parameter to <b>false</b>, all partitions that meet the specified condition will be deleted before data overwrite starts. For example, if you set <b>false</b> and use <b>INSERT OVERWRITE</b> to write partition <b>2021-02</b> to a partitioned table that has the <b>2021-01</b> partition, this partition will be deleted.</p> <p>If you set this parameter to <b>true</b>, DLI does not delete partitions before overwrite starts.</p> |
| spark.sql.files.maxPartitionBytes           | 134217728     | Maximum number of bytes to be packed into a single partition when a file is read.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| spark.sql.badRecordsPath                    | -             | Path of bad records.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| dli.sql.sqlasync.enabled                    | false         | Indicates whether DDL and DCL statements are executed asynchronously. The value <b>true</b> indicates that asynchronous execution is enabled.                                                                                                                                                                                                                                                                                                                                                                                                        |
| dli.sql.job.timeout                         | -             | Sets the job running timeout interval. If the timeout interval expires, the job is canceled. Unit: second                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Table 7-4** tags parameters

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| key       | Yes       | String | Tag key.    |

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| value     | Yes       | String | Tag value   |

## Response

**Table 7-5** Response parameters

| Parameter  | Mandatory | Type             | Description                                                                                                                                                                            |
|------------|-----------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_success | Yes       | Boolean          | Indicates whether the request is successfully sent. Value <b>true</b> indicates that the request is successfully sent.                                                                 |
| message    | Yes       | String           | System prompt. If execution succeeds, the parameter setting may be left blank.                                                                                                         |
| job_id     | Yes       | String           | ID of a job returned after a job is generated and submitted by using SQL statements. The job ID can be used to query the job status and results.                                       |
| job_type   | Yes       | String           | Type of a job. Job types include the following: <ul style="list-style-type: none"><li>• DDL</li><li>• DCL</li><li>• IMPORT</li><li>• EXPORT</li><li>• QUERY</li><li>• INSERT</li></ul> |
| schema     | No        | Array of objects | If the statement type is DDL, the column name and type of DDL are displayed.                                                                                                           |
| rows       | No        | Array of objects | When the statement type is DDL, results of the DDL are displayed.                                                                                                                      |
| job_mode   | No        | String           | Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>• <b>async</b>: asynchronous</li><li>• <b>sync</b>: synchronous</li></ul>                        |

## Example Request

Submit a SQL job. The job execution database and queue are **db1** and **default**, respectively. Then, add the tags **workspace=space1** and **jobName=name1** for the job.

```
{  
    "currentdb": "db1",
```

```

"sql": "desc table1",
"queue_name": "default",
"conf": [
    "dli.sql.shuffle.partitions = 200"
],
"tags": [
    {
        "key": "workspace",
        "value": "space1"
    },
    {
        "key": "jobName",
        "value": "name1"
    }
]
}

```

## Example Response

```

{
    "is_success": true,
    "message": "",
    "job_id": "8ecb0777-9c70-4529-9935-29ea0946039c",
    "job_type": "DDL",
    "job_mode": "sync",
    "schema": [
        {
            "col_name": "string"
        },
        {
            "data_type": "string"
        },
        {
            "comment": "string"
        }
    ],
    "rows": [
        [
            "c1",
            "int",
            null
        ],
        [
            "c2",
            "string",
            null
        ]
    ]
}

```

## Status Codes

[Table 7-6](#) describes the status code.

**Table 7-6** Status codes

| Status Code | Description             |
|-------------|-------------------------|
| 200         | Submitted successfully. |
| 400         | Request error.          |
| 500         | Internal service error. |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 7.2 Canceling a Job (Recommended)

## Function

This API is used to cancel a submitted job. If execution of a job completes or fails, this job cannot be canceled.

## URI

- URI format  
`DELETE /v1.0/{project_id}/jobs/{job_id}`
- Parameter description

**Table 7-7** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                               |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> . |
| job_id     | Yes       | String | Job ID. You can get the value by calling <a href="#">Submitting a SQL Job (Recommended)</a> .                                             |

## Request

None

## Response

**Table 7-8** Response parameters

| Parameter  | Mandatory | Type    | Description                                                                                                          |
|------------|-----------|---------|----------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean | Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | No        | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                       |

## Example Request

None

## Example Response

```
{  
  "is_success": true,  
  "message": ""  
}
```

## Status Codes

[Table 7-9](#) describes the status code.

**Table 7-9** Status codes

| Status Code | Description             |
|-------------|-------------------------|
| 200         | Canceled.               |
| 400         | Request error.          |
| 500         | Internal service error. |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 7.3 Querying All Jobs

### Function

This API is used to query information about all jobs in the current project.

### URI

- URI format  
GET /v1.0/{project\_id}/jobs
- Parameter description

**Table 7-10** URI parameter

| Parameter  | Mandatory | Type   | Description                                                                                                                               |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> . |

**Table 7-11** query parameter description

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| page-size    | No        | Integer | Maximum number of jobs displayed on each page. The value range is as follows: [1, 100]. The default value is <b>50</b> .                                                                                                                                                                                                                                                                                                       |
| current-page | No        | Integer | Current page number. The default value is <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                           |
| start        | No        | Long    | Queries the jobs executed later than the time specified by this parameter. The time is a UNIX timestamp in milliseconds.                                                                                                                                                                                                                                                                                                       |
| end          | No        | Long    | Queries the jobs executed earlier than the time specified by this parameter. The time is a UNIX timestamp in milliseconds.                                                                                                                                                                                                                                                                                                     |
| job-type     | No        | String  | Type of a job to be queried. Job types include <b>DDL</b> , <b>DCL</b> , <b>IMPORT</b> , <b>EXPORT</b> , <b>QUERY</b> , <b>INSERT</b> , <b>DATA_MIGRATION</b> , <b>UPDATE</b> , <b>DELETE</b> , <b>RESTART_QUEUE</b> , and <b>SCALE_QUEUE</b> . To query all types of jobs, enter <b>ALL</b> .                                                                                                                                 |
| job-status   | No        | String  | Status of the job to be queried.                                                                                                                                                                                                                                                                                                                                                                                               |
| job-id       | No        | String  | ID of the job to be queried. You can get the value by calling <a href="#">Submitting a SQL Job (Recommended)</a> .                                                                                                                                                                                                                                                                                                             |
| queue_name   | No        | String  | Specifies <b>queue_name</b> as the filter to query jobs running on the specified queue.                                                                                                                                                                                                                                                                                                                                        |
| sql_pattern  | No        | String  | Specifies the SQL segment as the filter. It is case insensitive.                                                                                                                                                                                                                                                                                                                                                               |
| order        | No        | String  | Specifies the job sorting mode. The default value is <b>start_time_desc</b> (job submission time in descending order). Four sorting modes are supported: <b>duration_desc</b> (job running duration in descending order), <b>duration_asc</b> (job running duration in ascending order), <b>start_time_desc</b> (job submission time in descending order), and <b>start_time_asc</b> (job submission time in ascending order). |
| engine-type  | No        | String  | Engine type.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| owner        | No        | String  | User who submits a job.                                                                                                                                                                                                                                                                                                                                                                                                        |

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| tags      | No        | String | <p>Queue tags for the search. You can specify multiple tags in <b>key=value</b> format.</p> <ul style="list-style-type: none"><li>Request with one specified tag<br/>For example, GET /v1.0/{project_id}/jobs?tags=k1%3Dv1<br/>In this example, = needs to be escaped to %3D, k1 indicates the tag key, and v1 indicates the tag value.</li><li>Request with more than one tag<br/>Separate tags with commas (,) and convert the commas (,) to %2C, for example, GET /v1.0/{project_id}/jobs?tags=k1%3Dv1%2Ck2%3Dv2.<br/>The equal sign (=) is escaped to %3D. k1 indicates a tag key, and v1 indicates the tag value. k2 indicates another tag key, and v2 indicates the tag value.</li></ul> <p>Currently, only fuzzy query is supported. Exact query is not supported.</p> |

#### NOTE

The following is an example of the URL containing the **query** parameter:

```
GET /v1.0/{project_id}/jobs?page-size={size}&current-page={page_number}&start={start_time}&end={end_time}&job-type={QUERY}&queue_name={test}&order={duration_desc}
```

## Request

## Response

**Table 7-12** Response parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                    |
|------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------|
| is_success | Yes       | Boolean | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | Yes       | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                 |

| Parameter | Mandatory | Type             | Description                                                                          |
|-----------|-----------|------------------|--------------------------------------------------------------------------------------|
| job_count | Yes       | Integer          | Indicates the total number of jobs.                                                  |
| jobs      | Yes       | Array of Objects | Indicates the information about a job. For details, see <a href="#">Table 7-13</a> . |

**Table 7-13** jobs parameters

| Parameter          | Mandatory | Type    | Description                                                                                                                                    |
|--------------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------|
| job_id             | Yes       | String  | Job ID.                                                                                                                                        |
| job_type           | Yes       | String  | Type of a job.                                                                                                                                 |
| queue_name         | Yes       | String  | Queue to which a job is submitted.                                                                                                             |
| owner              | Yes       | String  | User who submits a job.                                                                                                                        |
| start_time         | Yes       | Long    | Time when a job is started. The timestamp is expressed in milliseconds.                                                                        |
| duration           | Yes       | Long    | Job running duration (unit: millisecond).                                                                                                      |
| status             | Yes       | String  | Status of a job, including <b>LAUNCHING</b> , <b>RUNNING</b> , <b>FINISHED</b> , <b>FAILED</b> , and <b>CANCELLED</b> .                        |
| input_row_count    | No        | Long    | Number of records scanned during the Insert job execution.                                                                                     |
| bad_row_count      | No        | Long    | Number of error records scanned during the Insert job execution.                                                                               |
| input_size         | Yes       | Long    | Size of scanned files during job execution.                                                                                                    |
| result_count       | Yes       | Integer | Total number of records returned by the current job or total number of records inserted by the Insert job.                                     |
| database_name      | No        | String  | Name of the database where the target table resides. <b>database_name</b> is valid only for jobs of the <b>Import</b> and <b>Export</b> types. |
| table_name         | No        | String  | Name of the target table. <b>table_name</b> is valid only for jobs of the <b>Import</b> and <b>Export</b> types.                               |
| with_column_header | No        | Boolean | Import jobs, which record whether the imported data contains column names.                                                                     |

| Parameter | Mandatory | Type             | Description                                                  |
|-----------|-----------|------------------|--------------------------------------------------------------|
| detail    | Yes       | String           | JSON string of related columns queried using SQL statements. |
| statement | Yes       | String           | SQL statements of a job.                                     |
| message   | No        | String           | System prompt.                                               |
| end_time  | No        | Long             | Job end time. The timestamp is in milliseconds.              |
| tags      | No        | Array of Objects | Job tags. For details, see <a href="#">Table 7-14</a> .      |

**Table 7-14** tags parameters

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| key       | Yes       | String | Tag key     |
| value     | Yes       | String | Tag value   |

## Status Codes

[Table 7-15](#) describes the status code.

**Table 7-15** Status codes

| Status Code | Description              |
|-------------|--------------------------|
| 200         | The query is successful. |
| 400         | Request error.           |
| 500         | Internal service error.  |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 7.4 Previewing SQL Job Query Results

### Function

This API is used to view the job execution result after a job is executed using SQL query statements. Currently, you can only query execution results of jobs of the **QUERY** type.

This API can be used to view only the first 1000 result records and does not support pagination query. To view all query results, you need to export the query results first. For details, see [Exporting Query Results](#).

### URI

- URI format  
GET /v1.0/{project\_id}/jobs/{job\_id}/preview
- Parameter description

**Table 7-16** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                               |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> . |

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| job_id    | Yes       | String | Job ID      |

**Table 7-17 query parameter description**

| Parameter  | Mandatory | Type   | Description                                                                                                                  |
|------------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------|
| page-size  | No        | Long   | Number of result rows. The value ranges from 1 to 1000. The default rate limit is <b>1000</b> .                              |
| queue-name | No        | String | Name of the execution queue for obtaining job results. If this parameter is not specified, the default system queue is used. |

#### NOTE

The following is an example of the URL containing the **query** parameter:

```
GET /v1.0/{project_id}/jobs/{job_id}/preview?page-size={size}&queue-name={queue_name}
```

## Response

**Table 7-18 Response parameters**

| Parameter  | Mandatory | Type    | Description                                                                                                                    |
|------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------|
| is_success | No        | Boolean | Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed. |
| message    | No        | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                 |
| job_id     | No        | String  | Job ID You can get the value by calling <a href="#">Submitting a SQL Job (Recommended)</a> .                                   |

| Parameter  | Mandatory | Type             | Description                                                                                                                                                                                                                                                                                          |
|------------|-----------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| job_type   | No        | String           | Job type, including <b>DDL</b> , <b>DCL</b> , <b>IMPORT</b> , <b>EXPORT</b> , <b>QUERY</b> , <b>INSERT</b> , <b>DATA_MIGRATION</b> , <b>UPDATE</b> , <b>DELETE</b> , <b>RESTART_QUEUE</b> and <b>SCALE_QUEUE</b> . Currently, you can only query execution results of jobs of the <b>QUERY</b> type. |
| row_count  | No        | Integer          | Total number of job results.                                                                                                                                                                                                                                                                         |
| input_size | No        | long             | Amount of data scanned during job execution.                                                                                                                                                                                                                                                         |
| schema     | No        | Array of Objects | Name and type of the job result column.                                                                                                                                                                                                                                                              |
| rows       | No        | Array of Strings | Job results set.                                                                                                                                                                                                                                                                                     |

## Example Request

None

## Example Response

```
{
  "is_success": true,
  "message": "",
  "job_id": "ead0b276-8ed4-4eb5-b520-58f1511e7033",
  "job_type": "QUERY",

    ]
  ]
}
```

## Status Codes

[Table 7-19](#) describes the status code.

**Table 7-19** Status codes

| Status Code | Description              |
|-------------|--------------------------|
| 200         | The query is successful. |
| 400         | Request error.           |
| 500         | Internal service error.  |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 7.5 Querying Job Status

### Function

This API is used to query the status of a submitted job.

### URI

- URI format  
GET /v1.0/{project\_id}/jobs/{job\_id}/status
- Parameter description

**Table 7-20** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                  |
|------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation.<br>For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> . |
| job_id     | Yes       | String | Job ID.                                                                                                                                      |

### Request

None

## Response

**Table 7-21** Response parameters

| Parameter       | Mandatory | Type    | Description                                                                                                                                                                                                            |
|-----------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_success      | Yes       | Boolean | Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.                                                                                                   |
| message         | Yes       | String  | System prompt. If execution succeeds, this parameter is left blank.                                                                                                                                                    |
| job_id          | Yes       | String  | Job ID. You can get the value by calling <a href="#">Submitting a SQL Job (Recommended)</a> .                                                                                                                          |
| job_type        | Yes       | String  | Type of a job, Includes <b>DDL</b> , <b>DCL</b> , <b>IMPORT</b> , <b>EXPORT</b> , <b>QUERY</b> , <b>INSERT</b> , <b>DATA_MIGRATION</b> , <b>UPDATE</b> , <b>DELETE</b> , <b>RESTART_QUEUE</b> and <b>SCALE_QUEUE</b> . |
| job_mode        | Yes       | String  | Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>• <b>async</b>: asynchronous</li><li>• <b>sync</b>: synchronous</li></ul>                                                        |
| queue_name      | Yes       | String  | Name of the queue where the job is submitted.                                                                                                                                                                          |
| owner           | Yes       | String  | User who submits a job.                                                                                                                                                                                                |
| start_time      | Yes       | Long    | Time when a job is started. The timestamp is in milliseconds.                                                                                                                                                          |
| duration        | No        | Long    | Job running duration (unit: millisecond).                                                                                                                                                                              |
| status          | Yes       | String  | Status of a job, including <b>RUNNING</b> , <b>SCALING</b> , <b>LAUNCHING</b> , <b>FINISHED</b> , <b>FAILED</b> , and <b>CANCELLED</b> .                                                                               |
| input_row_count | No        | Long    | Number of records scanned during the Insert job execution.                                                                                                                                                             |
| bad_row_count   | No        | Long    | Number of error records scanned during the Insert job execution.                                                                                                                                                       |
| input_size      | Yes       | Long    | Size of scanned files during job execution (unit: byte).                                                                                                                                                               |
| result_count    | Yes       | Integer | Total number of records returned by the current job or total number of records inserted by the Insert job.                                                                                                             |

| Parameter     | Mandatory | Type             | Description                                                                                                                                            |
|---------------|-----------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| database_name | No        | String           | Name of the database where the target table resides. <b>database_name</b> is valid only for jobs of the <b>IMPORT EXPORT</b> , and <b>QUERY</b> types. |
| table_name    | No        | String           | Name of the target table. <b>table_name</b> is valid only for jobs of the <b>IMPORT EXPORT</b> , and <b>QUERY</b> types.                               |
| detail        | Yes       | String           | JSON string for information about related columns.                                                                                                     |
| statement     | Yes       | String           | SQL statements of a job.                                                                                                                               |
| tags          | No        | Array of objects | Job tags. For details, see <a href="#">Table 7-22</a> .                                                                                                |

**Table 7-22** tags parameters

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| key       | Yes       | String | Tag key     |
| value     | Yes       | String | Tag value   |

## Example Request

None

## Example Response

```
{
  "is_success": true,

## Status Codes

[Table 7-23](#) describes the status code.

**Table 7-23** Status codes

| Status Code | Description              |
|-------------|--------------------------|
| 200         | The query is successful. |
| 400         | Request error.           |
| 500         | Internal service error.  |

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 7.6 Querying Job Details

## Function

This API is used to query details about jobs, including **databasename**, **tablename**, **file size**, and **export mode**.

## URI

- URI format  
GET/v1.0/{project\_id}/jobs/{job\_id}/detail
- Parameter description

**Table 7-24** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                               |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> . |
| job_id     | Yes       | String | Job ID. You can get the value by calling <a href="#">Submitting a SQL Job (Recommended)</a> .                                             |

## Request

None

## Response

**Table 7-25** Response parameters

| Parameter          | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_success         | Yes       | Boolean | Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.                                                                                                                                                                                                                                                                                                                                                                            |
| message            | Yes       | String  | System prompt. If execution succeeds, the parameter setting may be left blank.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| job_id             | Yes       | String  | Job ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| owner              | Yes       | String  | User who submits a job.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| start_time         | Yes       | Long    | Time when a job is started. The timestamp is in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| duration           | Yes       | Long    | Duration for executing the job (unit: millisecond).                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| export_mode        | No        | String  | Specified export mode during data export and query result saving.<br>Available values are <b>ErrorIfExists</b> and <b>Overwrite</b> . <ul style="list-style-type: none"><li>• <b>ErrorIfExists</b>: Ensure that the specified export directory does not exist. If the specified export directory exists, an error is reported and the export operation cannot be performed.</li><li>• <b>Overwrite</b>: If you add new files to a specific directory, existing files will be deleted.</li></ul> |
| data_path          | Yes       | String  | Path to imported or exported files.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| data_type          | Yes       | String  | Type of data to be imported or exported. Currently, only CSV and JSON are supported.                                                                                                                                                                                                                                                                                                                                                                                                            |
| database_name      | Yes       | String  | Name of the database where the table, where data is imported or exported, resides.                                                                                                                                                                                                                                                                                                                                                                                                              |
| table_name         | Yes       | String  | Name of the table where data is imported or exported.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| with_column_header | No        | Boolean | Whether the imported data contains the column name during the execution of an import job.                                                                                                                                                                                                                                                                                                                                                                                                       |

| Parameter        | Mandatory | Type             | Description                                                           |
|------------------|-----------|------------------|-----------------------------------------------------------------------|
| delimiter        | No        | String           | User-defined data delimiter set when the import job is executed.      |
| quote_char       | No        | String           | User-defined quotation character set when the import job is executed. |
| escape_char      | No        | String           | User-defined escape character set when the import job is executed.    |
| date_format      | No        | String           | Table date format specified when the import job is executed.          |
| timestamp_format | No        | String           | Table time format specified when the import job is executed.          |
| compress         | No        | String           | Compression mode specified when the export job is executed.           |
| tags             | No        | Array of objects | Job tags. For details, see <a href="#">Table 7-26</a> .               |

**Table 7-26** tags parameter

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| key       | Yes       | String | Tag key     |
| value     | Yes       | String | Tag value   |

## Example Request

None

## Example Response

- Querying jobs of the **Import** type

```
{
  "is_success": true,
  "message": "",
  "data_path": "obs://DLI/computeCharging/test.csv",
  "data_type": "json",
  "database_name": "iam_exist",
  "date_format": "yyyy-MM-dd",
  "delimiter": ",",
  "duration": 1623,
  "escape_char": "\\",
  "job_id": "a85d7298-ecef-47f9-bb31-499d2099d112",
  "owner": "iam_exist",
  "quote_char": "\\",
  "start_time": 1517385246111,
  "table_name": "DLI_table20",
  "timestamp_format": "yyyy-MM-dd HH:mm:ss",
```

- ```
        "with_column_header": false
    }
  • Query jobs of the Export type
  {
    "is_success": true,
    "message": "",
    "compress": "none",
    "data_path": "obs://xxx/dli/path6",
    "data_type": "json",
    "database_name": "submitjob",
    "duration": 4142,
    "export_mode": "Overwrite",
    "job_id": "b89fccb2-de6a-4c6c-b9b2-21f08a2eb85e",
    "owner": "test",
    "start_time": 1524107798024,
    "table_name": "autotest"
}
```

## Status Codes

[Table 7-27](#) describes the status code.

**Table 7-27** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 7.7 Checking SQL Syntax

### Function

This API is used to check the SQL syntax.

### URI

- URI format  
POST /v1.0/{project\_id}/jobs/check-sql
- Parameter description

**Table 7-28** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 7-29** Request parameters

Parameter	Mandatory	Type	Description
sql	Yes	String	SQL statement that you want to execute.
current db	No	String	Database where the SQL statement is executed. <b>NOTE</b> <ul style="list-style-type: none"><li>If the SQL statement contains <b>db_name</b>, for example, <code>select * from db1.t1</code>, you do not need to set this parameter.</li><li>If the SQL statement does not contain <b>db_name</b>, the semantics check will fail when you do not set this parameter or set this parameter to an incorrect value.</li></ul>

## Response

**Table 7-30** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_type	No	String	Type of a job. Job types include the following: <b>DDL</b> , <b>DCL</b> , <b>IMPORT</b> , <b>EXPORT</b> , <b>QUERY</b> , and <b>INSERT</b> .

## Example Request

Check the syntax of the SQL statement `select * from t1`.

```
{  
  "currentdb": "db1",
```

```
        "sql": "select * from t1"
    }
```

## Example Response

```
{
  "is_success": true,
  "message": "the sql is ok",
  "job_type": "QUERY"
}
```

## Status Codes

[Table 7-31](#) describes the status code.

**Table 7-31** Status codes

Status Code	Description
200	The request is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 7.8 Exporting Query Results

## Function

This API is used to export results returned from the query using SQL statements to OBS. Only the query result of **QUERY** jobs can be exported.

### NOTE

- This API is asynchronous.
- Currently, data can be exported only to OBS, and the OBS path must be specified to the folder level. The OBS path cannot contain commas (,),. The OBS bucket name cannot end with the regular expression format ".[0-9]+(.\*)". Specifically, if the bucket name contains dots (.), the last dot (.) cannot be followed by a digit, for example, "\*\*\*.12abc" and "\*\*\*.12".

## URI

- URI format  
POST /v1.0/{project\_id}/jobs/{job\_id}/export-result
- Parameter description

**Table 7-32** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
job_id	Yes	String	Job ID.

## Request

**Table 7-33** Request parameters

Parameter	Mandatory	Type	Description
data_path	Yes	String	Path for storing the exported data. Currently, data can be stored only on OBS. The OBS path cannot contain folders, for example, the <b>path</b> folder in the sample request.
compress	No	String	Compression format of exported data. Currently, <b>gzip</b> , <b>bzip2</b> , and <b>deflate</b> are supported. The default value is <b>none</b> , indicating that data is not compressed.
data_type	Yes	String	Storage format of exported data. Currently, only CSV and JSON are supported.
queue_name	No	String	Name of the queue that is specified to execute a task. If no queue is specified, the default queue is used.
export_mode	No	String	Export mode. The parameter value can be <b>ErrorIfExists</b> or <b>Overwrite</b> . If <b>export_mode</b> is not specified, this parameter is set to <b>ErrorIfExists</b> by default. <ul style="list-style-type: none"><li>● <b>ErrorIfExists:</b> Ensure that the specified export directory does not exist. If the specified export directory exists, an error is reported and the export operation cannot be performed.</li><li>● <b>Overwrite:</b> If you add new files to a specific directory, existing files will be deleted.</li></ul>

Parameter	Mandatory	Type	Description
with_column_header	No	Boolean	Whether to export column names when exporting CSV and JSON data. <ul style="list-style-type: none"><li>• If this parameter is set to <b>true</b>, the column names are exported.</li><li>• If this parameter is set to <b>false</b>, the column names are not exported.</li><li>• If this parameter is left blank, the default value <b>false</b> is used.</li></ul>
limit_num	No	Integer	Number of data records to be exported. The default value is <b>0</b> , indicating that all data records are exported.
encoding_type	No	String	Format of the data to be exported. The value can be <b>utf-8</b> , <b>gb2312</b> , or <b>gbk</b> . Value <b>utf-8</b> will be used if this parameter is left empty.

## Response

**Table 7-34** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	Indicates whether the request is successfully sent. Value <b>true</b> indicates that the request is successfully sent.
message	Yes	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	ID of a job returned after a job is generated and submitted by using SQL statements. The job ID can be used to query the job status and results.
job_mode	No	String	Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>• <b>async</b>: asynchronous</li><li>• <b>sync</b>: synchronous</li></ul>

## Example Request

Export query results of SQL statements to OBS and stores the results in JSON format.

```
{  
    "data_path": "obs://obs-bucket1/path",  
    "data_type": "json",  
    "compress": "gzip",  
    "with_column_header": "true",  
    "queue_name": "queue2",  
    "limit_num": 10  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "job_id": "37a40ef9-86f5-42e6-b4c6-8feb89cc20",  
    "job_mode": "async"  
}
```

## Status Codes

[Table 7-35](#) describes the status code.

**Table 7-35** Status codes

Status Code	Description
200	Export successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 7.9 Querying the Job Execution Progress

## Function

This API is used to obtain the job execution progress. If a job is being executed, information about its subjobs can be obtained. If a job has just started or has ended, information about its subjobs cannot be obtained.

## URI

- URI format  
GET /v1/{project\_id}/jobs/{job\_id}/progress
- Parameter description

**Table 7-36** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
job_id	Yes	String	Job ID

## Request

None

## Response

**Table 7-37** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	Indicates whether the request is successfully sent. Value <b>true</b> indicates that the request is successfully sent.
message	Yes	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	ID of a job returned after a job is generated and submitted by using SQL statements. The job ID can be used to query the job status and results.
status	Yes	String	Job status. The status can be <b>RUNNING</b> , <b>SCALING</b> , <b>LAUNCHING</b> , <b>FINISHED</b> , <b>FAILED</b> , or <b>CANCELLED</b> .
sub_job_id	No	Integer	ID of a subjob that is running. If the subjob is not running or it is already finished, the subjob ID may be empty.

Parameter	Mandatory	Type	Description
progress	No	Double	<p>Progress of a running subjob or the entire job. The value can only be a rough estimate of the subjob progress and does not indicate the detailed job progress.</p> <ul style="list-style-type: none"><li>If the job is just started or being submitted, the progress is displayed as <b>0</b>. If the job execution is complete, the progress is displayed as <b>1</b>. In this case, progress indicates the running progress of the entire job. Because no subjob is running, <b>sub_job_id</b> is not displayed.</li><li>If a subjob is running, the running progress of the subjob is displayed. The calculation method of progress is as follows: Number of completed tasks of the subjob/Total number of tasks of the subjob. In this case, progress indicates the running progress of the subjob, and <b>sub_job_id</b> indicates the subjob ID.</li></ul>
sub_jobs	No	Array of Object	Details about a subjob of a running job. A job may contain multiple subjobs. For details, see <a href="#">Table 7-38</a> .

**Table 7-38** Parameters in the **sub\_jobs** field

Parameter	Mandatory	Type	Description
id	No	Integer	Subjob ID, corresponding to <b>jobId</b> of the open-source spark JobData.
name	No	String	Subjob name, corresponding to the <b>name</b> of the open-source spark JobData.
description	No	String	Description of a subjob, corresponding to the <b>description</b> of the open-source spark JobData.
submission_time	No	String	Submission time of a subjob, corresponding to the <b>submissionTime</b> of open-source Spark JobData.
completion_time	No	String	Completion time of a subjob, corresponding to the <b>completionTime</b> of the open-source Spark JobData.
stage_ids	No	Array of Integer	Stage ID of the subjob, corresponding to the <b>stageIds</b> of the open-source spark JobData.

Parameter	Mandatory	Type	Description
job_group	No	String	ID of a DLI job, corresponding to the <b>jobGroup</b> of open-source Spark JobData.
status	No	String	Subjob status, corresponding to the <b>status</b> of open-source spark JobData.
num_tasks	No	Integer	Number of subjobs, corresponding to <b>numTasks</b> of the open-source Spark JobData.
num_active_tasks	No	Integer	Number of running tasks in a subjob, corresponding to <b>numActiveTasks</b> of the open-source Spark JobData.
num_completed_tasks	No	Integer	Number of tasks that have been completed in a subjob, corresponding to <b>numCompletedTasks</b> of open-source Spark JobData.
num_skipped_tasks	No	Integer	Number of tasks skipped in a subjob, corresponding to <b>numSkippedTasks</b> of open-source Spark JobData.
num_failed_tasks	No	Integer	Number of subtasks that fail to be skipped, corresponding to <b>numFailedTasks</b> of open-source Spark JobData.
num_killed_tasks	No	Integer	Number of tasks killed in the subjob, corresponding to <b>numKilledTasks</b> of the open-source Spark JobData.
num_completed_indices	No	Integer	Subjob completion index, corresponding to the <b>numCompletedIndices</b> of the open-source Spark JobData.
num_active_stages	No	Integer	Number of stages that are running in the subjob, corresponding to <b>numActiveStages</b> of the open-source Spark JobData.
num_completed_stages	No	Integer	Number of stages that have been completed in the subjob, corresponding to <b>numCompletedStages</b> of the open-source Spark JobData.
num_skipped_stages	No	Integer	Number of stages skipped in the subjob, corresponding to <b>numSkippedStages</b> of the open-source Spark JobData.
num_failed_stages	No	Integer	Number of failed stages in a subjob, corresponding to <b>numFailedStages</b> of the open-source Spark JobData.

Parameter	Mandatory	Type	Description
killed_tasks_summary	No	Map<string,integer>	Summary of the killed tasks in the subjob, corresponding to <b>killedTasksSummary</b> of open-source spark JobData.

## Example Request

None

## Status Codes

[Table 7-39](#) describes the status code.

**Table 7-39** Status codes

Status Code	Description
200	The query is successful.
400	Request error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 7-40** Error codes

Error Code	Error Message
DLI.0999	The queue backend version is too old or the queue is busy.

# 8 Resource-related APIs

## 8.1 Package Group-related APIs

### 8.1.1 Uploading a Package Group

#### Function

This API is used to upload a package group to a **project**. The function is similar to creating a package on the management console.

#### URI

- URI format  
POST /v2.0/{project\_id}/resources
- Parameter description

**Table 8-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 8-2** Request parameters

Parameter	Mandatory	Type	Description
paths	Yes	Array of Strings	List of OBS object paths. The OBS object path refers to the OBS object URL.
kind	Yes	String	File type of a package group. <ul style="list-style-type: none"><li>• <b>jar</b>: JAR file</li><li>• <b>pyFile</b>: User Python file</li><li>• <b>file</b>: User file</li><li>• <b>modelFile</b>: User AI model file</li></ul> <b>NOTE</b> If the same group of packages to be uploaded contains different file types, select <b>file</b> as the type of the file to be uploaded.
group	Yes	String	Name of the group to be created.
is_async	No	Boolean	Whether to upload resource packages in asynchronous mode. The default value is <b>false</b> , indicating that the asynchronous mode is not used. You are advised to upload resource packages in asynchronous mode.
tags	No	Array of Objects	Resource tag. For details, see <a href="#">Table 8-3</a> .

**Table 8-3** tags parameter

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key.
value	Yes	String	Tag key.

## Response

**Table 8-4** Response parameters

Parameter	Mandatory	Type	Description
group_name	No	String	Group name.

Parameter	Mandatory	Type	Description
status	No	String	Status of a package group to be uploaded.
resources	No	Array of strings	List of names of resource packages contained in the group.
details	No	Array of body	Details about a group resource package. For details, see <a href="#">Table 8-5</a> .
create_time	No	Long	UNIX timestamp when a package group is uploaded.
update_time	No	Long	UNIX timestamp when a package group is updated.
is_async	No	Boolean	Whether to upload resource packages in asynchronous mode. The default value is <b>false</b> , indicating that the asynchronous mode is not used. You are advised to upload resource packages in asynchronous mode.
owner	No	String	Owner of a resource package.

**Table 8-5** details parameter description

Parameter	Mandatory	Type	Description
create_time	Yes	Long	UNIX time when a resource package is uploaded. The timestamp is in milliseconds.
update_time	No	Long	UNIX time when the uploaded resource package is uploaded. The timestamp is in milliseconds.
resource_type	Yes	String	Resource type.
resource_name	No	String	Resource name.
status	No	String	<ul style="list-style-type: none"><li>Value <b>UPLOADING</b> indicates that the resource package group is being uploaded.</li><li>Value <b>READY</b> indicates that the resource package has been uploaded.</li><li>Value <b>FAILED</b> indicates that the resource package fails to be uploaded.</li></ul>
underlying_name	No	String	Name of the resource packages in a queue.

Parameter	Mandatory	Type	Description
is_async	No	Boolean	Whether to upload resource packages in asynchronous mode. The default value is <b>false</b> , indicating that the asynchronous mode is not used. You are advised to upload resource packages in asynchronous mode.

## Example Request

Upload a JAR file from OBS to DLI and name the group **gatk**.

```
{
  "paths": [
    "https://xkftest.obs.xxx.com/txr_test/jars/spark-sdv-app.jar",
    "https://xkftest.obs.xxx.com/txr_test/jars/wordcount",
    "https://xkftest.obs.xxx.com/txr_test/jars/wordcount.py"
  ],
  "kind": "jar",
  "group": "gatk",
  "is_async": "true"
}
```

## Example Response

```
{
  "group_name": "gatk",
  "status": "READY",
  "resources": [
    "spark-sdv-app.jar",
    "wordcount",
    "wordcount.py"
  ],
  "details": [
    {
      "create_time": 0,
      "update_time": 0,
      "resource_type": "jar",
      "resource_name": "spark-sdv-app.jar",
      "status": "READY",
      "underlying_name": "987e208d-d46e-4475-a8c0-a62f0275750b_spark-sdv-app.jar"
    },
    {
      "create_time": 0,
      "update_time": 0,
      "resource_type": "jar",
      "resource_name": "wordcount",
      "status": "READY",
      "underlying_name": "987e208d-d46e-4475-a8c0-a62f0275750b_wordcount"
    },
    {
      "create_time": 0,
      "update_time": 0,
      "resource_type": "jar",
      "resource_name": "wordcount.py",
      "status": "READY",
      "underlying_name": "987e208d-d46e-4475-a8c0-a62f0275750b_wordcount.py"
    }
  ],
  "create_time": 1551334579654,
```

```
        "update_time": 1551345369070
    }
```

## Status Codes

[Table 8-6](#) describes the status code.

**Table 8-6** Status codes

Status Code	Description
201	The file is successfully uploaded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.1.2 Querying Package Group List

#### Function

This API is used to query all resources in a project, including groups.

#### URI

- URI format  
GET /v2.0/{project\_id}/resources
- Parameter description

**Table 8-7** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 8-8** query parameter description

Parameter	Mandatory	Type	Description
kind	No	String	Specifies the file type. The options are as follows: <ul style="list-style-type: none"><li>• <b>jar</b>: JAR file</li><li>• <b>pyFile</b>: User Python file</li><li>• <b>file</b>: User file</li><li>• <b>modelFile</b>: User AI model file</li></ul>
tags	No	String	Specifies a label for filtering.

## Request

None

## Response

**Table 8-9** Response parameters

Parameter	Mandatory	Type	Description
resources	No	Array of Objects	List of names of uploaded user resources. For details about resources, see <a href="#">Table 8-10</a> .
modules	No	Array of Objects	List of built-in resource groups. For details about the groups, see <a href="#">Table 8-11</a> .
groups	No	Array of Objects	Uploaded package groups of a user.
total	Yes	Integer	Total number of returned resource packages.

**Table 8-10** resources parameters

Parameter	Mandatory	Type	Description
create_time	No	Long	UNIX timestamp when a resource package is uploaded.
update_time	No	Long	UNIX timestamp when the uploaded resource package is uploaded.
resource_type	No	String	Resource type.

Parameter	Mandatory	Type	Description
resource_name	No	String	Resource name.
status	No	String	<ul style="list-style-type: none"><li>Value <b>UPLOADING</b> indicates that the resource package is being uploaded.</li><li>Value <b>READY</b> indicates that the resource package has been uploaded.</li><li>Value <b>FAILED</b> indicates that the resource package fails to be uploaded.</li></ul>
underlying_name	No	String	Name of the resource package in the queue.
owner	No	String	Owner of the resource package.

**Table 8-11** modules parameters

Parameter	Mandatory	Type	Description
module_name	No	String	Module name.
module_type	No	String	Module type.
status	No	String	<ul style="list-style-type: none"><li>Value <b>UPLOADING</b> indicates that the package group is being uploaded.</li><li>Value <b>READY</b> indicates that the package group has been uploaded.</li><li>Value <b>FAILED</b> indicates that the package group fails to be uploaded.</li></ul>
resources	No	Array of Strings	List of names of resource packages contained in the group.
description	No	String	Module description.
create_time	No	Long	UNIX timestamp when a package group is uploaded.
update_time	No	Long	UNIX timestamp when a package group is updated.

## Example Request

None

## Example Response

```
{  
    "resources": [  
        {  
            "create_time": 1521532893736,

            "create_time": 1521532893736,  
            "update_time": 1521552364503  
        }  
    ]  
}
```

## Status Codes

[Table 8-12](#) describes the status code.

**Table 8-12** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.1.3 Uploading a JAR Package Group

#### Function

This API is used to upload a group of JAR packages to a **project**.

#### NOTE

When a resource group with the same name is uploaded, the new group overwrites the old group.

#### URI

- URI format  
POST /v2.0/{project\_id}/resources/jars
- Parameter description

**Table 8-13** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 8-14** Request parameters

Parameter	Mandatory	Type	Description
paths	Yes	Array of Strings	List of OBS object paths. The OBS object path refers to the OBS object URL.
group	Yes	String	Name of a package group.

## Response

**Table 8-15** Response parameters

Parameter	Mandatory	Type	Description
group_name	No	String	Group name.
status	No	String	Status of a package group to be uploaded.
resources	No	Array of strings	List of names of resource packages contained in the group.
details	No	Array of body	Details about a group resource package. For details, see <a href="#">Table 8-16</a> .
create_time	No	Long	UNIX timestamp when a package group is uploaded.
update_time	No	Long	UNIX timestamp when a package group is updated.
is_async	No	Boolean	Whether to upload resource packages in asynchronous mode. The default value is <b>false</b> , indicating that the asynchronous mode is not used. You are advised to upload resource packages in asynchronous mode.
owner	No	String	Owner of a resource package.
description	No	String	Description of a resource module.
module_name	No	String	Name of a resource module.
module_type	No	String	Type of a resource module. <ul style="list-style-type: none"><li>• <b>jar</b>: User JAR file</li><li>• <b>pyFile</b>: User Python file</li><li>• <b>file</b>: User file</li></ul>

**Table 8-16** details parameter description

Parameter	Mandatory	Type	Description
create_time	No	Long	UNIX time when a resource package is uploaded. The timestamp is in milliseconds.
update_time	No	Long	UNIX time when the uploaded resource package is uploaded. The timestamp is in milliseconds.
resource_type	No	String	Resource type. Set this parameter to <b>jar</b> .
resource_name	No	String	Resource name.
status	No	String	<ul style="list-style-type: none"><li>Value <b>UPLOADING</b> indicates that the resource package group is being uploaded.</li><li>Value <b>READY</b> indicates that the resource package has been uploaded.</li><li>Value <b>FAILED</b> indicates that the resource package fails to be uploaded.</li></ul>
underlying_name	No	String	Name of the resource packages in a queue.
is_async	No	Boolean	Indicates whether to upload a resource package asynchronously.

## Example Request

Upload a JAR file from OBS to DLI and name the group **gatk**.

```
{  
  "paths": [  
    "https://test.obs.xxx.com/test_dli.jar"  
  ],  
  "group": "gatk"  
}
```

## Example Response

```
{  
  "group_name": "gatk",  
  "status": "READY",  
  "resources": [  
    "test_dli.jar"  
  ],  
  "details": [  
    {  
      "create_time":1608804435312,  
      "update_time":1608804435312,  
      "resource_type":"jar",  
      "resource_name":"test_dli.jar",  
    }  
  ]  
}
```

```
        "status":"READY",
        "underlying_name":"test_dli.jar"
    },
],
"create_time": 1521532893736,
"update_time": 1521552364503,
"is_async":false
}
```

## Status Codes

[Table 8-17](#) describes the status code.

**Table 8-17** Status codes

Status Code	Description
201	Upload succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.1.4 Uploading a PyFile Package Group

#### Function

This API is used to upload a group of **PyFile** packages to a **project**.

When a group with the same name as the PyFile package is uploaded, the new group overwrites the old group.

#### URI

- URI format  
POST /v2.0/{project\_id}/resources/pyfiles
- Parameter description

**Table 8-18** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 8-19** Request parameters

Parameter	Mandatory	Type	Description
paths	Yes	Array of strings	List of OBS object paths. The OBS object path refers to the OBS object URL.
group	Yes	String	Name of a package group.

## Response

**Table 8-20** Response parameters

Parameter	Mandatory	Type	Description
group_name	No	String	Group name.
status	No	String	Status of a package group to be uploaded.
resources	No	Array of strings	List of names of resource packages contained in the group.
details	No	Array of body	Details about a group resource package. For details, see <a href="#">Table 8-21</a> .
create_time	No	Long	UNIX timestamp when a package group is uploaded.
update_time	No	Long	UNIX timestamp when a package group is updated.

Parameter	Mandatory	Type	Description
is_async	No	Boolean	Whether to upload resource packages in asynchronous mode. The default value is <b>false</b> , indicating that the asynchronous mode is not used. You are advised to upload resource packages in asynchronous mode.
owner	No	String	Owner of a resource package.
description	No	String	Description of a resource module.
module_name	No	String	Name of a resource module.
module_type	No	String	Type of a resource module. <ul style="list-style-type: none"><li>• <b>jar</b>: User JAR file</li><li>• <b>pyFile</b>: User Python file</li><li>• <b>file</b>: User file</li></ul>

**Table 8-21** details parameter description

Parameter	Mandatory	Type	Description
create_time	No	Long	UNIX time when a resource package is uploaded. The timestamp is in milliseconds.
update_time	No	Long	UNIX time when the uploaded resource package is uploaded. The timestamp is in milliseconds.
resource_type	No	String	Resource type. Set this parameter to <b>pyFile</b> .
resource_name	No	String	Resource name.
status	No	String	<ul style="list-style-type: none"><li>• Value <b>UPLOADING</b> indicates that the resource package group is being uploaded.</li><li>• Value <b>READY</b> indicates that the resource package has been uploaded.</li><li>• Value <b>FAILED</b> indicates that the resource package fails to be uploaded.</li></ul>
underlying_name	No	String	Name of the resource packages in a queue.

Parameter	Mandatory	Type	Description
is_async	No	Boolean	Indicates whether to upload a resource package asynchronously.

## Example Request

Upload a Python file from OBS to DLI and name the group **gatk**.

```
{  
    "paths": [  
        "https://test.obs.xxx.com/dli_tf.py"  
    ],  
    "group": "gatk"  
}
```

## Example Response

```
{  
    "group_name": "gatk",  
    "status": "READY",  
    "resources": [  
        "dli_tf.py"  
    ],  
    "details": [  
        {  
            "create_time": 1608804435312,  
            "update_time": 1608804435312,  
            "resource_type": "pyFile",  
            "resource_name": "dli_tf.py",  
            "status": "READY",  
            "underlying_name": "dli_tf.py"  
        }  
    ],  
    "create_time": 1521532893736,  
    "update_time": 1521552364503,  
    "is_async": false  
}
```

## Status Codes

[Table 8-22](#) describes the status code.

**Table 8-22** Status codes

Status Code	Description
201	Upload succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.1.5 Uploading a File Package Group

#### Function

This API is used to upload a group of **File** packages to a **project**.

#### NOTE

When the **File** package group with the same name is uploaded, the new group overwrites the old group.

#### URI

- URI format  
POST /v2.0/{project\_id}/resources/files
- Parameter description

**Table 8-23** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

#### Request

**Table 8-24** Request parameters

Parameter	Mandatory	Type	Description
paths	Yes	Array of Strings	List of OBS object paths. The OBS object path refers to the OBS object URL.
group	Yes	String	Name of a package group.

## Response

**Table 8-25** Response parameters

Parameter	Mandatory	Type	Description
group_name	No	String	Group name.
status	No	String	Status of a package group to be uploaded.
resources	No	Array of strings	List of names of resource packages contained in the group.
details	No	Array of body	Details about a group resource package. For details, see <a href="#">Table 8-26</a> .
create_time	No	Long	UNIX timestamp when a package group is uploaded.
update_time	No	Long	UNIX timestamp when a package group is updated.
is_async	No	Boolean	Whether to upload resource packages in asynchronous mode. The default value is <b>false</b> , indicating that the asynchronous mode is not used. You are advised to upload resource packages in asynchronous mode.
owner	No	String	Owner of a resource package.
description	No	String	Description of a resource module.
module_name	No	String	Name of a resource module.
module_type	No	String	Type of a resource module. <ul style="list-style-type: none"><li>• <b>jar</b>: User JAR file</li><li>• <b>pyFile</b>: User Python file</li><li>• <b>file</b>: User file</li></ul>

**Table 8-26** details parameter description

Parameter	Mandatory	Type	Description
create_time	No	Long	UNIX time when a resource package is uploaded. The timestamp is expressed in milliseconds.

Parameter	Mandatory	Type	Description
update_time	No	Long	UNIX time when the uploaded resource package is uploaded. The timestamp is expressed in milliseconds.
resource_type	No	String	Resource type. Set this parameter to <b>file</b> .
resource_name	No	String	Resource name.
status	No	String	<ul style="list-style-type: none"><li>Value <b>UPLOADING</b> indicates that the resource package group is being uploaded.</li><li>Value <b>READY</b> indicates that the resource package has been uploaded.</li><li>Value <b>FAILED</b> indicates that the resource package fails to be uploaded.</li></ul>
underlying_name	No	String	Name of the resource packages in a queue.
is_async	No	Boolean	Indicates whether to upload a resource package asynchronously.

## Example Request

Upload a file from OBS to DLI and name the group **gatk**.

```
{  
    "paths": [  
        "https://test.obs.xxx.com/test_dli.jar",  
        "https://test.obs.xxx.com/dli_tf.py"  
    ],  
    "group": "gatk"  
}
```

## Example Response

```
{  
    "group_name": "gatk",  
    "status": "READY",  
    "resources": [  
        "test_dli.jar",  
        "dli_tf.py"  
    ],  
    "details": [  
        {  
            "create_time": 1608804435312,  
            "update_time": 1608804435312,  
            "resource_type": "file",  
            "resource_name": "test_dli.jar",  
            "status": "READY",  
            "underlying_name": "test_dli.jar"  
        },  
        {  
            "create_time": 1608804435312,  
            "update_time": 1608804435312,  
            "resource_type": "file",  
            "resource_name": "dli_tf.py",  
            "status": "READY",  
            "underlying_name": "dli_tf.py"  
        }  
    ]  
}
```

```
"update_time":1608804435312,  
"resource_type":"file",  
"resource_name":"dli_tf.py",  
"status":"READY",  
"underlying_name":"dli_tf.py"  
}  
],  
"create_time": 1521532893736,  
"update_time": 1521552364503,  
"is_async":false  
}
```

## Status Codes

[Table 8-27](#) describes the status code.

**Table 8-27** Status codes

Status Code	Description
201	Upload succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.1.6 Querying Resource Packages in a Group

#### Function

This API is used to query resource information of a package group in a [Project](#).

#### URI

- URI format  
GET /v2.0/{project\_id}/resources/{resource\_name}
- Parameter description

**Table 8-28** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

Parameter	Mandatory	Type	Description
resource_name	Yes	String	Name of the resource package that is uploaded.

**Table 8-29** query parameter description

Parameter	Mandatory	Type	Description
group	No	String	Name of the package group returned when the resource package is uploaded.

 NOTE

The following is an example of the URL containing the **query** parameter:

GET /v2.0/{project\_id}/resources/{resource\_name}?group={group}

## Request

None

## Response

**Table 8-30** Response parameters

Parameter	Type	Description
create_time	Long	UNIX time when a resource package is uploaded. The timestamp is expressed in milliseconds.
update_time	Long	UNIX time when the uploaded resource package is uploaded. The timestamp is expressed in milliseconds.
resource_type	String	Resource type.
resource_name	String	Resource name.
status	String	<ul style="list-style-type: none"><li>Value <b>UPLOADING</b> indicates that the resource package group is being uploaded.</li><li>Value <b>READY</b> indicates that the resource package has been uploaded.</li><li>Value <b>FAILED</b> indicates that the resource package fails to be uploaded.</li></ul>

Parameter	Type	Description
underlying_name	String	Name of the resource packages in a queue.
owner	String	Owner of a resource package.

## Example Request

None

## Example Response

```
{  
    "create_time": 1522055409139,  
    "update_time": 1522228350501,  
    "resource_type": "jar",  
    "resource_name": "luxor-ommanager-dist.tar.gz",  
    "status": "uploading",  
    "underlying_name": "7885d26e-c532-40f3-a755-c82c442f19b8_luxor-ommanager-dist.tar.gz"  
}
```

## Status Codes

[Table 8-31](#) describes the status code.

**Table 8-31** Status codes

Status Codes	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 8.1.7 Deleting a Resource Package from a Group

### Function

This API is used to delete resource packages in a group in a [Project](#).

### URI

- URI format  
`DELETE /v2.0/{project_id}/resources/{resource_name}`

- Parameter description

**Table 8-32** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
resource_name	Yes	String	Name of the resource package that is uploaded.

**Table 8-33** query parameter description

Parameter	Mandatory	Type	Description
group	No	String	Name of the package group returned when the resource package is uploaded.

#### NOTE

The following is an example of the URL containing the **query** parameter:

DELETE /v2.0/{project\_id}/resources/{resource\_name}?group={group}

## Request

None

## Response

- Code 200 is returned if you successfully delete a resource package.
- Code 404 is returned if you initiate a request to delete a resource package that does not exist.

## Example Request

None

## Example Response

None

## Status Codes

**Table 8-34** describes the status code.

**Table 8-34** Status codes

Status Code	Description
200	Deletion succeeded.
404	Not found.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.1.8 Changing the Owner of a Group or Resource Package

#### Function

This API is used to change the owner of a program package.

#### URI

- URI format  
`PUT /v2.0/{project_id}/resources/owner`
- Parameter description

**Table 8-35** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

#### Request

**Table 8-36** Request parameters

Parameter	Mandatory	Type	Description
new_owner	Yes	String	New username. The name contains 5 to 32 characters, including only digits, letters, underscores (_), and hyphens (-). It cannot start with a digit.

Parameter	Mandatory	Type	Description
group_name	Yes	String	Group name. The name contains a maximum of 64 characters. Only digits, letters, periods (.), underscores (_), and hyphens (-) are allowed.
resource_name	No	String	Package name. The name can contain only digits, letters, underscores (_), exclamation marks (!), hyphens (-), and periods (.), but cannot start with a period. The length (including the file name extension) cannot exceed 128 characters. <b>This parameter is mandatory if you want to change the owner of a resource package in a group.</b>

#### NOTE

**group\_name** and **resource\_name** can be used independently or together.

- To change the owner of a group, use **group\_name**.
- To change the owner of a resource package, use **resource\_name**.
- To change the owner of a resource package in a group, use **group\_name** and **resource\_name** at the same time.

## Response

**Table 8-37** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

Change the group name of the program package to **groupName** and the user name to **scuser1**.

```
{  
    "new_owner": "scuser1",  
    "group_name": "groupName"  
}
```

## Example Response

```
{  
  "is_success": "true",  
  "message": ""  
}
```

## Status Codes

[Table 8-38](#) describes the status code.

**Table 8-38** Status codes

Status Code	Description
200	The modification operations are successful.
404	Request error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 8-39** Error codes

Error Code	Error Message
DLI.0002	No such user. userName:ssssss.

## 8.2 Database-related APIs

### 8.2.1 Creating a Database

#### Function

This API is used to add a database.

#### URI

- URI format  
POST /v1.0/{project\_id}/databases
- Parameter description

**Table 8-40** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 8-41** Request parameters

Parameter	Mandatory	Type	Description
database_name	Yes	String	Name of the created database. <ul style="list-style-type: none"><li>• The database name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_).</li><li>• The database name is case insensitive and cannot be left blank.</li><li>• The length of the database name cannot exceed 128 characters.</li></ul> <b>NOTE</b> The <b>default</b> database is a built-in database. You cannot create a database named <b>default</b> .
description	No	String	Information about the created database.
enterprise_project_id	No	String	Enterprise project ID. The value <b>0</b> indicates the default enterprise project. <b>NOTE</b> Users who have enabled Enterprise Management can set this parameter to bind a specified project.
tags	No	Array of Objects	Database tag. For details, see <a href="#">Table 8-42</a> .

**Table 8-42** tags parameters

Parameter	Mandatory	Type	Description
Key	Yes	String	Tag key.
value	Yes	String	Tag key.

## Response

**Table 8-43** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

Create a test database named **db1**.

```
{  
  "database_name": "db1",  
  "description": "this is for test"  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": ""  
}
```

## Status Codes

**Table 8-44** describes the status code.

**Table 8-44** Status codes

Status Code	Description
200	The job is created successfully.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 8.2.2 Deleting a Database

### Function

This API is used to delete an empty database. If there are tables in the database to be deleted, delete all tables first. For details about the API used to delete tables, see [Deleting a Table](#).

### URI

- URI format  
`DELETE /v1.0/{project_id}/databases/{database_name}`
- Parameter description

**Table 8-45** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of the database to be deleted.

**Table 8-46** query parameter description

Parameter	Mandatory	Type	Description
cascade	No	Boolean	Specifies whether to forcibly delete the database. The value can be <b>true</b> or <b>false</b> . Default value: <b>false</b> .
async	No	Boolean	Specifies whether to delete the database in asynchronous mode. The value can be <b>true</b> or <b>false</b> . Default value: <b>false</b> .

### NOTE

The following is an example of the URL containing the **query** parameter:

```
DELETE /v1.0/{project_id}/databases/{database_name}?
cascade={is_cascade}&async={is_async}
```

### Request

None

## Response

**Table 8-47** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	Returned job ID, which can be used to obtain the job status and result.
job_type	No	String	Type of a job. The options are as follows: <ul style="list-style-type: none"><li>• DDL</li><li>• DCL</li><li>• IMPORT</li><li>• EXPORT</li><li>• QUERY</li><li>• INSERT</li></ul>
job_mode	No	String	Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>• <b>async</b>: asynchronous</li><li>• <b>sync</b>: synchronous</li></ul>

## Example Request

None

## Example Response

- The following is an example of a successful response in synchronous mode:

```
{  
  "is_success": true,  
  "message": "",  
  "job_mode": "sync"  
}
```
- The following is an example of a successful response in asynchronous mode:

```
{  
  "is_success": true,  
  "message": "",  
  "job_id": "208b08d4-0dc2-4dd7-8879-ddd4c020d7aa",  
  "job_type": "DDL",  
  "job_mode": "async"  
}
```

 NOTE

- If the database is deleted asynchronously, you can view the current job status by calling the API for querying job status. For details, see [Querying Job Status](#).
- If **cascade** is set to **true**, all tables in the database will be deleted. Exercise caution when performing this operation.

## Status Codes

[Table 8-48](#) describes the status code.

**Table 8-48** Status codes

Status Code	Description
200	Deletion succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.2.3 Querying All Databases

#### Function

This API is used to query the information about all the databases.

#### URI

- URI format  
GET /v1.0/{project\_id}/databases
- Parameter description

**Table 8-49** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 8-50** query parameter description

Parameter	Mandatory	Type	Description
with-priv	No	Boolean	Specifies whether to display the permission information. The value can be <b>true</b> or <b>false</b> . The default value is <b>false</b> .
offset	No	Integer	The value should be no less than <b>0</b> . The default value is <b>0</b> .
limit	No	Integer	Number of returned data records. The value must be greater than or equal to <b>0</b> . By default, all data records are returned.
keyword	No	String	Database name filtering keyword. Fuzzy match is used to obtain all databases whose names contain the keyword.
tags	No	String	<p>Database tags. The format is <b>key=value</b>.</p> <ul style="list-style-type: none"><li>Request with one specified tag GET /v1.0/{project_id}/databases?offset=0&amp;limit=10&amp;with-priv=true&amp;tags=k1%3Dv1 The equal sign (=) is escaped to <b>%3D</b>. <b>k1</b> indicates the tag key, and <b>v1</b> indicates the tag value.</li><li>Request with more than one tag Use commas (,) to separate tags. The commas (,) must be escaped to <b>%2C</b>. For example: GET /v1.0/{project_id}/databases?offset=0&amp;limit=10&amp;with-priv=true&amp;tags=k1%3Dv1%2Ck2%3Dv2 The equal sign (=) is escaped to <b>%3D</b>. <b>k1</b> indicates a tag key, and <b>v1</b> indicates the tag value. <b>k2</b> indicates another tag key, and <b>v2</b> indicates the tag value.</li></ul> <p>Currently, only fuzzy query is supported. Exact query is not supported.</p>

 **NOTE**

The following is an example of the URL containing the **query** parameter:

```
GET /v1.0/{project_id}/databases?with-priv={is_with_priv}&offset={offsetValue}&limit={limitValue}&keyword={keywordValue}&tags={tagsValue}
```

## Request

None

## Response

**Table 8-51** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
database_count	No	Integer	Total number of databases.
databases	No	Array of objects	Database information. For details, see <a href="#">Table 8-52</a> .

**Table 8-52** databases parameters

Parameter	Mandatory	Type	Description
database_name	No	String	Name of a database.
owner	No	String	Creator of a database.
table_number	No	Integer	Number of tables in a database.
description	No	String	Information about a database.
enterprise_project_id	Yes	String	Enterprise project ID. The value <b>0</b> indicates the default enterprise project. <b>NOTE</b> Users who have enabled Enterprise Management can set this parameter to bind a specified project.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "database_count": 1,  
    "databases": [  
        {  
            "database_name": "db2",  
            "description": "this is for test",  
            "owner": "tenant1",  
            "table_number": 15  
        }  
    ]  
}
```

## Status Codes

[Table 8-53](#) describes the status code.

**Table 8-53** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.2.4 Modifying a Database Owner

#### Function

This API is used to modify the owner of a database.

#### URI

- URI format  
`PUT /v1.0/{project_id}/databases/{database_name}/owner`
- Parameter description

**Table 8-54** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of a database.

## Request

**Table 8-55** Request parameters

Parameter	Mandatory	Type	Description
new_owner	Yes	String	Name of the new owner. The new user must be a sub-user of the current tenant.

## Response

**Table 8-56** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

Change the owner of the database to **scuser1**.

```
{  
  "new_owner": "scuser1"  
}
```

## Example Response

```
{  
  "is_success": true,  
}
```

```
        "message": ""  
    }
```

## Status Codes

[Table 8-57](#) describes the status code.

**Table 8-57** Status codes

Status Code	Description
200	The modification operations are successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 8.3 Table-related APIs

### 8.3.1 Creating a Table

#### Function

This API is used to create a table.

This API is a synchronous API.

#### URI

- URI format  
POST /v1.0/{project\_id}/databases/{database\_name}/tables
- Parameter description

**Table 8-58** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

Parameter	Mandatory	Type	Description
database_name	Yes	String	Name of the database where the new table resides.

## Request

**Table 8-59** Request parameters

Parameter	Mandatory	Type	Description
table_name	Yes	String	<p>Name of the created table.</p> <ul style="list-style-type: none"> <li>The table name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_).</li> <li>The table name is case insensitive and cannot be left unspecified.</li> <li>The table name can contain the dollar sign (\$). Example: \$test</li> <li>The length of the database name cannot exceed 128 characters.</li> </ul>
data_location	Yes	String	<p>Location where data is stored. The options are as follows:</p> <ul style="list-style-type: none"> <li>OBS: OBS table</li> <li>DLI: DLI table</li> <li>VIEW: VIEW table</li> </ul>
description	No	String	Information about the new table.
columns	Yes	Array of Objects	<p>Columns of the new table. For details about column parameters, see <a href="#">Table 8-61</a>. This parameter is optional when <b>data_location</b> is <b>VIEW</b>.</p>
select_statement	No	String	<p>Query statement required for creating a view. The database to which the table belongs needs to be specified in the query statement, in the format of <i>database.table</i>. This parameter is mandatory when <b>data_location</b> is <b>VIEW</b>.</p>
data_type	No	String	<p>Type of the data to be added to the OBS table. The options are as follows: Parquet, ORC, CSV, JSON, and Avro.</p> <p><b>NOTE</b> This parameter is mandatory for an OBS table.</p>

Parameter	Mandatory	Type	Description
data_path	No	String	<p>Storage path of data in the new OBS table, which must be a path on OBS and must begin with <b>obs</b>.</p> <p><b>NOTE</b>            This parameter is mandatory for an OBS table.            Do not set this parameter to the OBS root directory. Otherwise, all data in the root directory will be cleared when you clear table data.</p>
with_column_header	No	Boolean	Whether the table header is included in the OBS table data. Only data in CSV files has this attribute. This parameter is mandatory when <b>data_location</b> is <b>OBS</b> .
delimiter	No	String	User-defined data delimiter. Only data in CSV files has this attribute. This parameter is mandatory when <b>data_location</b> is <b>OBS</b> .
quote_char	No	String	User-defined reference character. Double quotation marks ("") are used by default. Only data in CSV files has this attribute. This parameter is mandatory when <b>data_location</b> is <b>OBS</b> .
escape_char	No	String	User-defined escape character. Backslashes (\) are used by default. Only data in CSV files has this attribute. This parameter is mandatory when <b>data_location</b> is <b>OBS</b> .
date_format	No	String	User-defined date type. <b>yyyy-MM-dd</b> is used by default. For details about the characters involved in the date format, see <a href="#">Table 8-70</a> . Only data in CSV and JSON files has this attribute. This parameter is mandatory when <b>data_location</b> is <b>OBS</b> .
timestamp_format	No	String	User-defined timestamp type. <b>yyyy-MM-dd HH:mm:ss</b> is used by default. For definitions about characters in the timestamp format, see <a href="#">Table 8-70</a> . Only data in CSV and JSON files has this attribute. This parameter is mandatory when <b>data_location</b> is <b>OBS</b> .
tags	No	Array of Objects	Database tag. For details about this object, see <a href="#">tags parameters</a> .

**Table 8-60** tags parameters

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key
value	Yes	String	Tag value

**Table 8-61** columns parameters

Parameter	Mandatory	Type	Description
column_name	Yes	String	Name of a column.
type	Yes	String	Data type of a column.
description	No	String	Description of a column.
is_partition_column	No	Boolean	Whether the column is a partition column. The value <b>true</b> indicates a partition column, and the value <b>false</b> indicates a non-partition column. The default value is <b>false</b> . <b>NOTE</b> When creating a partition table, ensure that at least one column in the table is a non-partition column. For details, see "Request example".

## Response

**Table 8-62** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

- Create a table whose **data\_location** is **OBS** and data format of CSV.

```
{  
    "table_name": "tb1",  
    "data_location": "OBS",  
    "description": "",  
    "data_type": "csv",  
    "data_path": "obs://obs/path1",  
    "columns": [  
        {  
            "column_name": "column1",  
            "type": "string",  
            "description": "",  
            "is_partition_column": true  
        },  
        {  
            "column_name": "column2",  
            "type": "string",  
            "description": "",  
            "is_partition_column": false  
        }  
    ],  
    "with_column_header": true,  
    "delimiter": ",",  
    "quote_char": "\\"",  
    "escape_char": "\\\",  
    "date_format": "yyyy-MM-dd",  
    "timestamp_format": "yyyy-MM-dd HH:mm:ss"  
}
```

### NOTE

The values of **date\_format** and **timestamp\_format** must be the same as the time format in the imported CSV file.

- Create a table whose **data\_location** is **VIEW**.

```
{  
    "table_name": "view1",  
    "data_location": "VIEW",  
    "columns": [  
        {  
            "column_name": "column1",  
            "type": "string",  
            "description": "",  
            "is_partition_column": true  
        },  
        {  
            "column_name": "column2",  
            "type": "string",  
            "description": "",  
            "is_partition_column": false  
        }  
    ],  
    "select_statement": "select * from db1.tb1"  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": ""  
}
```

## Status Codes

[Table 8-63](#) describes the status code.

**Table 8-63** Status codes

Status Code	Description
200	The job is created successfully.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.2 Deleting a Table

#### Function

This API is used to delete a specified table.

#### URI

- URI format  
`DELETE /v1.0/{project_id}/databases/{database_name}/tables/{table_name}`
- Parameter description

**Table 8-64** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of the database where the table to be deleted resides.
table_name	Yes	String	Name of the table to be deleted.

**Table 8-65** query parameter description

Parameter	Mandatory	Type	Description
async	No	Boolean	Specifies whether to delete the database in asynchronous mode. The value can be <b>true</b> or <b>false</b> . Default value: <b>false</b> .

 NOTE

The following is an example of the URL containing the **query** parameter:

```
DELETE /v1.0/{project_id}/databases/{database_name}/tables/{table_name}?
async={is_async}
```

## Request

None

## Response

**Table 8-66** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_mode	No	String	Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>● <b>async</b>: asynchronous</li><li>● <b>sync</b>: synchronous</li></ul>

## Example Request

None

## Example Response

```
{
  "is_success": true,
  "message": ""
}
```

## Status Codes

**Table 8-67** describes the status code.

**Table 8-67** Status codes

Status Code	Description
200	Deletion succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.3 Importing Data

#### Function

This API is used to import data from a file to a DLI or OBS table. Currently, only OBS data can be imported to a DLI or OBS table.

##### NOTE

- This API is asynchronous.
- When importing data, you can select an existing OBS bucket path or create an OBS bucket path, but only one OBS bucket path can be specified.
- If you need to create an OBS bucket, ensure that the bucket name complies with the following naming rules:
  - The name must be globally unique in OBS.
  - The name must contain 3 to 63 characters. Only lowercase letters, digits, hyphens (-), and periods (.) are allowed.
  - The name cannot start or end with a period (.) or hyphen (-), and cannot contain two consecutive periods (.) or contain a period (.) and a hyphen (-) adjacent to each other.
  - The name cannot be an IP address.
  - If the name contains any period (.), the security certificate verification may be triggered when you access the bucket or objects in the bucket.
  - If the type of a column in the source file to be imported does not match that of the target table, the query result of the row will be null.
  - Two or more concurrent tasks of importing data to the same table are not allowed.

#### URI

- URI format  
`POST /v1.0/{project_id}/jobs/import-table`
- Parameter description

**Table 8-68** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 8-69** Request parameters

Parameter	Mandatory	Type	Description
data_path	Yes	String	Path to the data to be imported. Currently, only OBS data can be imported.
data_type	Yes	String	Type of the data to be imported. Currently, data types of CSV, Parquet, ORC, JSON, and Avro are supported. <b>NOTE</b> Data in <b>Avro</b> format generated by Hive tables cannot be imported.
database_name	Yes	String	Name of the database where the table to which data is imported resides.
table_name	Yes	String	Name of the table to which data is imported.
with_column_header	No	Boolean	Whether the first line of the imported data contains column names, that is, headers. The default value is <b>false</b> , indicating that column names are not contained. This parameter can be specified when CSV data is imported.
delimiter	No	String	User-defined data delimiter. The default value is a comma (,). This parameter can be specified when CSV data is imported.
quote_char	No	String	User-defined quotation character. The default value is double quotation marks (""). This parameter can be specified when CSV data is imported.
escape_char	No	String	User-defined escape character. The default value is a backslash (\). This parameter can be specified when CSV data is imported.
date_format	No	String	Specified date format. The default value is <b>yyyy-MM-dd</b> . For details about the characters involved in the date format, see <a href="#">Table 8-70</a> . This parameter can be specified when data in the CSV or JSON format is imported.
bad_records_path	No	String	<b>Bad records</b> storage directory during job execution. After configuring this item, the <b>bad records</b> is not imported into the target table.
timestamp_format	No	String	Specified time format. The default value is <b>yyyy-MM-dd HH:mm:ss</b> . For definitions about characters in the time format, see <a href="#">Table 8-70</a> . This parameter can be specified when data in the CSV or JSON format is imported.

Parameter	Mandatory	Type	Description
queue_name	No	String	Name of the queue that is specified to execute a task. If no queue is specified, the default queue is used.
overwrite	No	Boolean	Whether to overwrite data. The default value is <b>false</b> , indicating appending write. If the value is <b>true</b> , it indicates overwriting.
partition_spec	No	Object	<p>Partition to which data is to be imported.</p> <ul style="list-style-type: none"> <li>If this parameter is not set, the entire table data is dynamically imported. The imported data must contain the data in the partition column.</li> <li>If this parameter is set and all partition information is configured during data import, data is imported to the specified partition. The imported data cannot contain data in the partition column.</li> <li>If not all partition information is configured during data import, the imported data must contain all non-specified partition data. Otherwise, abnormal values such as <b>null</b> exist in the partition field column of non-specified data after data import.</li> </ul>
conf	No	Array of Strings	<p>User-defined parameter that applies to the job. Currently, <b>dli.sql.dynamicPartitionOverwrite.enabled</b> can be set to <b>false</b> by default. If it is set to <b>true</b>, data in a specified partition is overwritten. If it is set to <b>false</b>, data in the entire DataSource table is dynamically overwritten.</p> <p><b>NOTE</b> For dynamic overwrite of Hive partition tables, only the involved partition data can be overwritten. The entire table data cannot be overwritten.</p>

**Table 8-70** Definition of characters involved in the date and time patterns

Character	Date or Time Element	Example
G	Epoch ID	AD
y	Year	1996; 96
M	Month	July; Jul; 07

Character	Date or Time Element	Example
w	Which week in a year	27 (Week 27 in the year)
W	Which week in a month	2 (Second week in the month)
D	Which day in a year	189 (Day 189 in the year)
d	Which day in a month	10 (Day 10 in the month)
u	Which day in a week	1 (Monday), ..., 7 (Sunday)
a	am/pm flag	pm (Afternoon)
H	Hour time (0-23)	2
h	Hour time (1-12)	12
m	Minute time	30
s	Second time	55
S	Which milliseconds	978
z	Time zone	Pacific Standard Time; PST; GMT-08:00

## Response

**Table 8-71** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully sent. Value <b>true</b> indicates that the request is successfully sent.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	ID of a job returned after a job is generated and submitted by using SQL statements. The job ID can be used to query the job status and results.

Parameter	Mandatory	Type	Description
job_mode	No	String	Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>• <b>async</b>: asynchronous</li><li>• <b>sync</b>: synchronous</li></ul>

## Example Request

Import the CSV data stored on OBS to **db2.t2**.

```
{  
    "data_path": "obs://home/data1/DLI/t1.csv",  
    "data_type": "csv",  
    "database_name": "db2",  
    "table_name": "t2",  
    "with_column_header": false,  
    "delimiter": ",",  
    "quote_char": "",  
    "escape_char": "",  
    "date_format": "yyyy-MM-dd",  
    "timestamp_format": "yyyy-MM-dd'T'HH:mm:ss.SSSZZ",  
    "queue_name": "queue2",  
    "overwrite": false,  
    "partition_spec":{  
        "column1": "2020-01-01",  
        "column2": "columnPartValue"  
    }  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "import data to table t2 started",  
    "job_id": "6b29eb77-4c16-4e74-838a-2cf7959e9202",  
    "job_mode": "async"  
}
```

## Status Codes

[Table 8-72](#) describes the status code.

**Table 8-72** Status codes

Status Code	Description
200	Import succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.4 Exporting Data

#### Function

This API is used to export data from a DLI table to a file.

- This API is asynchronous.
- Currently, data can be exported only from a DLI table to OBS, and the OBS path must be specified to the folder level. The OBS path cannot contain commas (,), The OBS bucket name cannot end with the regular expression format `.[0-9]+(.*)`. Specifically, if the bucket name contains dots (.), the last dot (.) cannot be followed by a digit, for example, `**.12abc` and `**.12`.
- Data can be exported across accounts. That is, after account B authorizes account A, account A can export data to the OBS path of account B if account A has the permission to read the metadata and permission information about the OBS bucket of account B and read and write the path.

#### URI

- URI format  
`POST /v1.0/{project_id}/jobs/export-table`
- Parameter description

**Table 8-73** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 8-74** Request parameters

Parameter	Mandatory	Type	Description
data_path	Yes	String	Path for storing the exported data. Currently, data can be stored only on OBS. If <b>export_mode</b> is set to <b>errorIfExists</b> , the OBS path cannot contain the specified folder, for example, the <b>test</b> folder in the example request.
data_type	Yes	String	Type of data to be exported. Currently, only CSV and JSON are supported.
database_name	Yes	String	Name of the database where the table from which data is exported resides.
table_name	Yes	String	Name of the table from which data is exported.
compress	Yes	String	Compression mode for exported data. Currently, the compression modes <b>gzip</b> , <b>bzip2</b> , and <b>deflate</b> are supported. If you do not want to compress data, enter <b>none</b> .
queue_name	No	String	Name of the queue that is specified to execute a task. If no queue is specified, the default queue is used.
export_mode	No	String	Export mode. The parameter value can be <b>ErrorIfExists</b> or <b>Overwrite</b> . If <b>export_mode</b> is not specified, this parameter is set to <b>ErrorIfExists</b> by default. <ul style="list-style-type: none"><li>● <b>ErrorIfExists:</b> Ensure that the specified export directory does not exist. If the specified export directory exists, an error is reported and the export operation cannot be performed.</li><li>● <b>Overwrite:</b> If you add new files to a specific directory, existing files will be deleted.</li></ul>
with_column_header	No	Boolean	Whether to export column names when exporting CSV and JSON data. <ul style="list-style-type: none"><li>● If this parameter is set to <b>true</b>, the column names are exported.</li><li>● If this parameter is set to <b>false</b>, the column names are not exported.</li><li>● If this parameter is left blank, the default value <b>false</b> is used.</li></ul>

## Response

**Table 8-75** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully sent. Value <b>true</b> indicates that the request is successfully sent.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	ID of a job returned after a job is generated and submitted by using SQL statements. The job ID can be used to query the job status and results.
job_mode	No	String	Job execution mode. The options are as follows: <ul style="list-style-type: none"><li>• <b>async</b>: asynchronous</li><li>• <b>sync</b>: synchronous</li></ul>

## Example Request

Export data from **db2.t2** to OBS and store the data in JSON format.

```
{  
    "data_path": "obs://home/data1/DLI/test",  
    "data_type": "json",  
    "database_name": "db2",  
    "table_name": "t2",  
    "compress": "gzip",  
    "with_column_header": "true",  
    "queue_name": "queue2"  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "export all data from table db2.t2 to path obs://home/data1/DLI/test started",  
    "job_id": "828d4044-3d39-449b-b32c-957f7cfadfc9",  
    "job_mode": "async"  
}
```

## Status Codes

**Table 8-76** describes the status code.

**Table 8-76** Status codes

Status Code	Description
200	Export successful.

Status Code	Description
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.5 Querying All Tables (Recommended)

#### Function

This API is used to query information about tables that meet the filtering criteria or all the tables in the specified database.

#### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/tables
- Parameter description

**Table 8-77** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of the database where the table resides.

**Table 8-78** query parameter description

Parameter	Mandatory	Type	Description
keyword	No	String	Keywords used to filter table names.
with-detail	No	Boolean	Whether to obtain detailed information about tables (such as owner and size). The default value is <b>false</b> .
page-size	No	Integer	Paging size. The minimum value is <b>1</b> and the maximum value is <b>100</b> .

Parameter	Mandatory	Type	Description
current-page	No	Integer	Current page number. The minimum value is 1.
with-priv	No	Boolean	Whether to return permission information.
table-type	No	String	Database table type. The options are as follows: <ul style="list-style-type: none"><li>• <b>MANAGED_TABLE</b>: DLI table</li><li>• <b>EXTERNAL_TABLE</b>: OBS table</li><li>• <b>VIRTUAL_VIEW</b>: view</li></ul>
datasource-type	No	String	Data source type. The options are as follows: <ul style="list-style-type: none"><li>• CloudTable</li><li>• CSS</li><li>• DLI</li><li>• DWS</li><li>• Geomesa</li><li>• HBase</li><li>• JDBC</li><li>• Mongo</li><li>• OBS</li><li>• ODPS</li><li>• OpenTSDB</li><li>• Redis</li><li>• RDS</li></ul>
without-tablemeta	No	Boolean	Whether to obtain the metadata of a table. The default value is <b>false</b> . If this parameter is set to <b>true</b> , the response speed can be greatly improved.

#### NOTE

The following is an example of the URL containing the **query** parameter:

GET /v1.0/{project\_id}/databases/{database\_name}/tables?keyword=tb&with-detail=true

## Request

None

## Response

**Table 8-79** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	Yes	String	System prompt. If execution succeeds, the parameter setting may be left blank.
table_count	Yes	Integer	Total number of tables.
tables	Yes	Array of Objects	Table information. For details, see <a href="#">Table 8-80</a> .

**Table 8-80** tables parameters

Parameter	Mandatory	Type	Description
create_time	Yes	Long	Time when a table is created. The timestamp is expressed in milliseconds.
data_type	No	String	Type of the data to be added to the OBS table. The options are as follows: Parquet, ORC, CSV, JSON, and Avro. <b>NOTE</b> This parameter is available only for OBS tables.
data_location	Yes	String	Data storage location, which can be DLI or OBS.
last_access_time	Yes	Long	Time when the table was last updated. The timestamp is expressed in milliseconds.
location	No	String	Storage path on the OBS table. <b>NOTE</b> This parameter is available only for OBS tables.
owner	Yes	String	Table owner.
table_name	Yes	String	Name of a table.
table_size	Yes	Long	Size of a DLI table. Set parameter to <b>0</b> for non-DLI tables. The unit is byte.

Parameter	Mandatory	Type	Description
table_type	Yes	String	Type of a table. <ul style="list-style-type: none"><li>• <b>EXTERNAL</b>: Indicates an OBS table.</li><li>• <b>MANAGED</b>: Indicates a DLI table.</li><li>• <b>VIEW</b>: Indicates a view.</li></ul>
partition_columns	No	String	Partition field. This parameter is valid only for OBS partition tables.
page-size	No	Integer	Paging size. The minimum value is <b>1</b> and the maximum value is <b>100</b> .
current-page	No	Integer	Current page number. The minimum value is <b>1</b> .

### NOTE

If **with-detail** is set to **false** in the URI, only values of tables-related parameters **data\_location**, **table\_name**, and **table\_type** are returned.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "table_count": 1,  
    "tables": [  
        { "create_time":1517364268000,  
          "data_location":"OBS",  
          "data_type":"csv",  
          "last_access_time":1517364268000,  
          "location":"obs://DLI/sqldata/data.txt",  
          "owner":"test",  
          "partition_columns": ["a0"],  
          "table_name":"obs_t",  
          "table_size":0,  
          "table_type":"EXTERNAL"  
        }  
    ]  
}
```

## Status Codes

[Table 8-81](#) describes the status code.

**Table 8-81** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.6 Describing the Table Information

#### Function

This API is used to describe metadata information in the specified table.

#### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/tables/{table\_name}
- Parameter description

**Table 8-82** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of the database where the target table resides.
table_name	Yes	String	Name of the target table.

#### Request

None

## Response

**Table 8-83** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	Yes	String	System prompt. If execution succeeds, the parameter setting may be left blank.
column_count	Yes	Integer	Total number of columns in the table.
columns	Yes	Array of Objects	Column information, including the column name, type, and description. For details, see <a href="#">Table 8-84</a> .
table_type	Yes	String	Table type. The options are as follows: <b>MANAGED</b> : DLI table <b>EXTERNAL</b> : OBS table <b>VIEW</b> : view
data_type	No	String	Data type, including <b>CSV</b> , <b>Parquet</b> , <b>ORC</b> , <b>JSON</b> , and <b>Avro</b> .
data_location	No	String	Path for storing data, which is an OBS path.
storage_properties	No	Array of Objects	Storage attribute, which is in the format of <b>key/value</b> and includes parameters <b>delimiter</b> , <b>escape</b> , <b>quote</b> , <b>header</b> , <b>dateformat</b> , and <b>timestampformat</b> .
table_comment	No	String	Table comment.
create_table_sql	No	String	Statement used to create a table.

**Table 8-84** `columns` parameters

Parameter	Mandatory	Type	Description
column_name	Yes	String	Column name.
description	Yes	String	Description of a column.

Parameter	Mandatory	Type	Description
type	Yes	String	Data type of a column.
is_partition_column	Yes	Boolean	Indicates whether the column is a partition column. The value <b>true</b> indicates that the column is a partition column, and the value <b>false</b> indicates that the column is not a partition column. The default value is <b>false</b> .

## Example Request

None

## Example Response

- **MANAGED** type table

```
{
  "is_success": true,
  "message": "",
  "column_count": 3,
  "columns": [
    {
      "column_name": "id",
      "description": "",
      "type": "int",
      "is_partition_column": false
    },
    {
      "column_name": "name",
      "description": "",
      "type": "string",
      "is_partition_column": false
    },
    {
      "column_name": "level",
      "description": "",
      "type": "string",
      "is_partition_column": true
    }
  ],
  "table_type": "MANAGED"
}
```

- **EXTERNAL** type table

```
{
  "is_success": true,
  "message": "",
  "column_count": 2,
  "columns": [
    {
      "type": "string",
      "description": "",
      "column_name": "col2",
      "is_partition_column": false
    },
    {
      "type": "string",
      "description": ""
    }
  ]
}
```

```

        "column_name": "col1",
        "is_partition_column": true
    },
],
"table_type": "EXTERNAL",
"data_type": "parquet",
"data_location": "obs://obs-wangtao/savepoint/savepoint-d95437-039668840fff/_metadata",
"storage_properties": [
{
    "key": "timestampformat",
    "value": "yyyy-MM-dd HH:mm:ss"
},
{
    "key": "quote",
    "value": "\\\""
},
{
    "key": "dateformat",
    "value": "yyyy-MM-dd"
},
{
    "key": "escape",
    "value": "\\\\""
},
{
    "key": "header",
    "value": "false"
},
{
    "key": "delimiter",
    "value": ","
}
],
"table_comment": "",
"create_table_sql": "CREATE TABLE `default`.`wan_test` (`col2` STRING, `col1` STRING)\nUSING parquet\nOPTIONS (\n    `timestampformat` 'yyyy-MM-dd HH:mm:ss',\n    `quote` '\\\"',\n    `dateformat` 'yyyy-MM-dd',\n    `escape` '\\\\\\\\',\n    `header` 'false',\n    `delimiter` ','\n)\nPARTITIONED BY\n(`col1`)\nCOMMENT \"\nLOCATION 'obs://obs-wangtao/savepoint/savepoint-d95437-039668840fff/_metadata'\nTBLPROPERTIES (\n    'hive.serialization.extend.nesting.levels' = 'true'\n)\n"
}

```

- **VIEW type table**

```

{
    "is_success": true,
    "message": "",
    "column_count": 3,
    "columns": [
        {
            "column_name": "id",
            "description": "",
            "type": "int",
            "is_partition_column": false
        },
        {
            "column_name": "name",
            "description": "",
            "type": "string",
            "is_partition_column": false
        },
        {
            "column_name": "level",
            "description": "",
            "type": "string",
            "is_partition_column": true
        }
    ],
    "table_type": "VIEW",
    "create_table_sql": "CREATE VIEW `default`.`view1`(id, name) AS\nselect * from a_gff.testtable\n"
}

```

## Status Codes

[Table 8-85](#) describes the status code.

**Table 8-85** Status codes

Status Code	Description
200	The operation is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.7 Previewing Table Content

#### Function

This API is used to preview the first 10 rows in a table.

#### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/tables/{table\_name}/preview
- Parameter description

**Table 8-86** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of the database where the table to be previewed resides.
table_name	Yes	String	Name of the table to be previewed.

**Table 8-87** query parameter description

Parameter	Mandatory	Type	Description
mode	No	String	Preview table mode. The options are <b>SYNC</b> and <b>ASYNC</b> . The default value is <b>SYNC</b> .

 **NOTE**

The following is an example of the URL containing the **query** parameter:

```
GET /v1.0/{project_id}/databases/{database_name}/tables/{table_name}/preview?  
mode={previewMode}
```

## Request

None

## Response

**Table 8-88** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
schema	No	Array of objects	Column name and type of a table.
rows	No	Array of objects	Previewed table content.

## Example Request

None

## Example Response

The following is an example of a successful response in synchronous mode:

```
{  
  "is_success": true,  
  "message": "",  
  "schema": [  
    {  
      "id": "int"  
    }  
  ]  
}
```

```
        },
        {
          "name": "string"
        },
        {
          "address": "string"
        }
      ],
      "rows": [
        [
          [
            "1",
            "John",
            "xxx"
          ],
          [
            "2",
            "Lily",
            "xxx"
          ]
        ]
      ]
    }
```

#### NOTE

In asynchronous request mode, a job ID is returned. You can obtain the preview information based on the job ID.

## Status Codes

[Table 8-89](#) describes the status code.

**Table 8-89** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 8.3.8 Obtaining the Partition List

#### Function

This API is used to obtain the partition list.

#### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}/tables/{table\_name}/partitions

- Parameter description

**Table 8-90** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	String	Name of a database.
table_name	Yes	String	Name of a table.

**Table 8-91** query parameter description

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of returned records displayed on each page. The default value is <b>100</b> .
offset	No	Integer	Offset.
filter	No	String	Filtering condition. Currently, only the = condition is supported. For example, <b>name=name1</b> indicates that the data whose name is <b>name1</b> in the partition is filtered. <b>name</b> indicates the name of the partition column, and <b>name1</b> indicates the value of the partition column. The key and value are case insensitive.  Example: GET /v1.0/{project_id}/databases/{database_name}/tables/{table_name}/partitions?part=part2

## Request

None

## Response

**Table 8-92** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
partitions	No	Object	Partition information. For details, see <a href="#">Table 8-93</a> .

**Table 8-93** partitions parameter description

Parameter	Mandatory	Type	Description
total_count	Yes	Long	Total number of partitions.
partition_infos	Yes	Array of Objects	List of partitions. For details, see <a href="#">Table 8-94</a> .

**Table 8-94** partition\_infos parameter description

Parameter	Mandatory	Type	Description
partition_name	Yes	String	Partition name.
create_time	Yes	Long	Time when a partition is created.
last_access_time	Yes	Long	Last update time.
locations	No	Array of Strings	Path. This parameter is displayed only for non-DLI tables.
last_ddl_time	No	Long	Execution time of the last DDL statement, in seconds.
num_rows	No	Long	Total rows in the partition.
num_files	No	Long	Number of files in a partition.
total_size	No	Long	Total size of data in the partition, in bytes.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "list partitions succeed",  
    "partitions": [  
        {  
            "total_count": 5,  
            "partition_infos": [  
                {  
                    "partition_name": "name=test",  
                    "create_time": 1579520179000,  
                    "last_access_time": 1579520179000,  
                    "locations": [  
                        "obs://test/partition"  
                    ]  
                },  
                {  
                    "partition_name": "name=test1",  
                    "create_time": 1579521406000,  
                    "last_access_time": 1579521406000,  
                    "locations": [  
                        "obs://test/partition"  
                    ]  
                },  
                {  
                    "partition_name": "name=test2",  
                    "create_time": 1579521884000,  
                    "last_access_time": 1579521884000,  
                    "locations": [  
                        "obs://test/partition"  
                    ]  
                },  
                {  
                    "partition_name": "name=test3",  
                    "create_time": 1579522085000,  
                    "last_access_time": 1579522085000,  
                    "locations": [  
                        "obs://test/partition"  
                    ]  
                },  
                {  
                    "partition_name": "name=name1/age=age1",  
                    "create_time": 1581409182000,  
                    "last_access_time": 1581409182000,  
                    "locations": [  
                        "obs://test/0117"  
                    ],  
                    "last_ddl_time": 1581409182,  
                    "total_size": 2130,  
                    "num_rows": -1,  
                    "num_files": 2  
                }  
            ]  
        }  
    ]  
}
```

## Status Codes

[Table 8-95](#) describes the status code.

**Table 8-95** Status codes

Status Code	Description
200	The operation is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 9 APIs Related to Flink Jobs

## 9.1 Granting OBS Permissions to DLI

### Function

This API is used to grant DLI the permission to access OBS buckets for saving job checkpoints and run logs.

### URI

- URI format  
POST /v1.0/{project\_id}/dli/obs-authorize
- Parameter description

**Table 9-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 9-2** Request parameters

Parameter	Mandatory	Type	Description
obs_buckets	Yes	Array of Strings	List of OBS buckets.

## Response

**Table 9-3** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.

## Example Request

Grant DLI the permission to access the OBS bucket **bucket1** so that DLI can save job checkpoints and run logs to the bucket.

```
{  
    "obs_buckets": [  
        "bucket1"  
    ]  
}
```

## Example Response

```
{  
    "is_success": "true",  
    "message": "The following OBS bucket is authorized successfully, bucket1."  
}
```

## Status Codes

[Table 9-4](#) describes the status code.

**Table 9-4** Status codes

Status Code	Description
200	Authorization succeeds.
400	Request error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.2 Creating a SQL Job

### Function

This API is used to create a Flink streaming SQL job.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/sql-jobs
- Parameter description

**Table 9-5** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 9-6** Request parameters

Parameter	Mandatory	Type	Description
name	Yes	String	Name of the job. The value can contain 1 to 57 characters.
desc	No	String	Job description. Length range: 0 to 512 characters.
template_id	No	Integer	Template ID. If both <b>template_id</b> and <b>sql_body</b> are specified, <b>sql_body</b> is used. If <b>template_id</b> is specified but <b>sql_body</b> is not, fill <b>sql_body</b> with the <b>template_id</b> value.
queue_name	No	String	Name of a queue. The value can contain 0 to 128 characters.
sql_body	No	String	Stream SQL statement, which includes at least the following three parts: source, query, and sink. Length range: 1,024 x 1,024 characters.

Parameter	Mandatory	Type	Description
run_mode	No	String	<p>Job running mode. The options are as follows:</p> <ul style="list-style-type: none"> <li>• <b>shared_cluster</b>: indicates that the job is running on a shared cluster.</li> <li>• <b>exclusive_cluster</b>: indicates that the job is running on an exclusive cluster.</li> <li>• <b>edge_node</b>: indicates that the job is running on an edge node.</li> </ul> <p>The default value is <b>shared_cluster</b>.</p>
cu_number	No	Integer	<p>Number of CUs selected for a job. The default value is <b>2</b>.</p> <p>Sum of the number of compute units and job manager CUs of DLI. CU is also the billing unit of DLI. One CU equals one vCPU and 4 GB. The value is the number of CUs required for job running and cannot exceed the number of CUs in the bound queue. For details about how to set the number of CUs of JobManager, see <b>manager_cu_number</b>.</p>
parallel_number	No	Integer	<p>Number of parallel jobs set by a user. The default value is <b>1</b>.</p> <p>Number of Flink SQL jobs that run at the same time. Properly increasing the number of parallel threads improves the overall computing capability of the job. However, the switchover overhead caused by the increase of threads must be considered. This value cannot be greater than four times the compute units (number of CUs minus the number of JobManager CUs).</p> <p>For details about how to set the number of JobManager CUs, see <b>manager_cu_number</b>.</p>
checkpoint_enabled	No	Boolean	<p>Whether to enable the automatic job snapshot function.</p> <ul style="list-style-type: none"> <li>• <b>true</b>: indicates to enable the automatic job snapshot function.</li> <li>• <b>false</b>: indicates to disable the automatic job snapshot function.</li> <li>• Default value: <b>false</b></li> </ul>

Parameter	Mandatory	Type	Description
checkpoint_mode	No	Integer	<p>Snapshot mode. There are two options:</p> <ul style="list-style-type: none"> <li>• <b>1: ExactlyOnce</b>, indicates that data is processed only once.</li> <li>• <b>2: AtLeastOnce</b>, indicates that data is processed at least once.</li> </ul> <p>The default value is <b>1</b>.</p>
checkpoint_interval	No	Integer	Snapshot interval. The unit is second. The default value is <b>10</b> .
obs_bucket	No	String	<p>OBS path where users are authorized to save the snapshot. This parameter is valid only when <b>checkpoint_enabled</b> is set to <b>true</b>.</p> <p>OBS path where users are authorized to save the snapshot. This parameter is valid only when <b>log_enabled</b> is set to <b>true</b>.</p>
log_enabled	No	Boolean	Whether to enable the function of uploading job logs to users' OBS buckets. The default value is <b>false</b> .
smn_topic	No	String	SMN topic. If a job fails, the system will send a message to users subscribed to the SMN topic.
restart_when_exception	No	Boolean	Whether to enable the function of automatically restarting a job upon job exceptions. The default value is <b>false</b> .
idle_state_retention	No	Integer	Retention time of the idle state. The unit is second. The default value is <b>3600</b> .
job_type	No	String	Job type. This parameter can be set to <b>flink_sql_job</b> .
dirty_data_strategy	No	String	<p>Dirty data policy of a job.</p> <ul style="list-style-type: none"> <li>• <b>2:obsDir</b>: Save. <b>obsDir</b> specifies the path for storing dirty data.</li> <li>• <b>1</b>: Trigger a job exception</li> <li>• <b>0</b>: Ignore</li> </ul> <p>The default value is <b>0</b>.</p>
udf_jar_url	No	String	Name of the resource package that has been uploaded to the DLI resource management system. The UDF Jar file of the SQL job is specified by this parameter.
manager_cu_number	No	Integer	Number of CUs in the JobManager selected for a job. The default value is <b>1</b> .

Parameter	Mandatory	Type	Description
tm_cus	No	Integer	Number of CUs for each TaskManager. The default value is <b>1</b> .
tm_slot_num	No	Integer	Number of slots in each TaskManager. The default value is <b>(parallel_number*tm_cus)/(cu_number-manager_cu_number)</b> .
resume_checkpoint	No	Boolean	Whether the abnormal restart is recovered from the checkpoint.
resume_max_num	No	Integer	Maximum number of retry times upon exceptions. The unit is times/hour. Value range: -1 or greater than 0. The default value is <b>-1</b> , indicating that the number of times is unlimited.
tags	No	Array of Objects	Label of a Flink SQL job. For details, see <a href="#">Table 9-7</a> .
runtime_config	No	String	Customizes optimization parameters when a Flink job is running.

**Table 9-7** tags parameters

Parameter	Mandatory	Type	Description
key	Yes	String	<p>Tag key. <b>NOTE</b> A tag key can contain a maximum of 36 characters. Only letters, digits, hyphens (-), underscores (_), and spaces are allowed. The key cannot start or end with a space.</p>
value	Yes	String	<p>Tag key. <b>NOTE</b> A tag value can contain a maximum of 43 characters. Only letters, digits, hyphens (-), underscores (_), periods (.), and spaces are allowed. The value cannot start or end with a space.</p>

## Response

**Table 9-8** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.
job	No	Object	Information about the job status. For details, see <a href="#">Table 9-9</a> .

**Table 9-9** job parameters

Parameter	Mandatory	Type	Description
job_id	Yes	Long	Job ID.
status_name	No	String	Name of job status. For details, see the description of the <b>status</b> field in <a href="#">Querying Job Details</a> .
status_desc	No	String	Status description. Causes and suggestions for the abnormal status.

## Example Request

Use the template whose ID is **100000** to create a Flink SQL job named **myjob**. The job runs in dedicated mode on the **testQueue** queue.

```
{  
    "name": "myjob",  
    "desc": "This is a job used for counting characters.",  
    "template_id": 100000,  
    "queue_name": "testQueue",  
    "sql_body": "select * from source_table",  
    "run_mode": "exclusive_cluster",  
    "cu_number": 2,  
    "parallel_number": 1,  
    "checkpoint_enabled": false,  
    "checkpoint_mode": "exactly_once",  
    "checkpoint_interval": 0,  
    "obs_bucket": "my_obs_bucket",  
    "log_enabled": false,  
    "restart_when_exception": false,  
    "idle_state_retention": 3600,  
    "job_type": "flink_sql_job",  
    "dirty_data_strategy": "0",  
    "udf_jar_url": "group/test.jar"  
}
```

## Example Response

```
{  
    "is_success": "true",  
    "message": "A DLI job is created successfully.",  
    "job": {  
        "job_id": 148,  
        "status_name": "job_init",  
        "status_desc": ""  
    }  
}
```

## Status Codes

[Table 9-10](#) describes status codes.

**Table 9-10** Status codes

Status Code	Description
200	The job is created successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.3 Updating a SQL Job

### Function

This API is used to modify a Flink SQL job.

### URI

- URI format  
`PUT /v1.0/{project_id}/streaming/sql-jobs/{job_id}`
- Parameter description

**Table 9-11** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

Parameter	Mandatory	Type	Description
job_id	Yes	Long	Job ID. Refer to <a href="#">Creating a SQL Job</a> to obtain the value.

## Request

**Table 9-12** Request parameters

Parameter	Mandatory	Type	Description
name	No	String	Name of a job. Length range: 0 to 57 characters.
desc	No	String	Job description. Length range: 0 to 512 characters.
queue_name	No	String	Name of a queue. The value can contain 0 to 128 characters.
sql_body	No	String	Stream SQL statement, which includes at least the following three parts: source, query, and sink. Length range: 0 to 1024x1024 characters.
run_mode	No	String	Job running mode. The options are as follows: <ul style="list-style-type: none"> <li>• <b>shared_cluster</b>: indicates that the job is running on a shared cluster.</li> <li>• <b>exclusive_cluster</b>: indicates that the job is running on an exclusive cluster.</li> <li>• <b>edge_node</b>: indicates that the job is running on an edge node.</li> </ul> The default value is <b>shared_cluster</b> .
cu_number	No	Integer	Number of CUs selected for a job. The default value is <b>2</b> .
parallel_number	No	Integer	Number of parallel jobs set by a user. The default value is <b>1</b> .

Parameter	Mandatory	Type	Description
checkpoint_enabled	No	Boolean	<p>Whether to enable the automatic job snapshot function.</p> <ul style="list-style-type: none"> <li>• <b>true</b>: indicates to enable the automatic job snapshot function.</li> <li>• <b>false</b>: indicates to disable the automatic job snapshot function.</li> <li>• Default value: <b>false</b></li> </ul>
checkpoint_mode	No	Integer	<p>Snapshot mode. There are two options:</p> <ul style="list-style-type: none"> <li>• <b>1: ExactlyOnce</b>, indicates that data is processed only once.</li> <li>• <b>2: at_least_once</b>, indicates that data is processed at least once.</li> </ul> <p>The default value is <b>1</b>.</p>
checkpoint_interval	No	Integer	Snapshot interval. The unit is second. The default value is <b>10</b> .
obs_bucket	No	String	<p>OBS path where users are authorized to save the snapshot. This parameter is valid only when <b>checkpoint_enabled</b> is set to <b>true</b>.</p> <p>OBS path where users are authorized to save the snapshot. This parameter is valid only when <b>log_enabled</b> is set to <b>true</b>.</p>
log_enabled	No	Boolean	Whether to enable the function of uploading job logs to users' OBS buckets. The default value is <b>false</b> .
smn_topic	No	String	SMN topic. If a job fails, the system will send a message to users subscribed to the SMN topic.
restart_when_exception	No	Boolean	Whether to enable the function of automatically restarting a job upon job exceptions. The default value is <b>false</b> .
idle_state_retention	No	Integer	Expiration time, in seconds. The default value is <b>3600</b> .
edge_group_ids	No	Array of Strings	List of edge computing group IDs. Use commas (,) to separate multiple IDs.

Parameter	Mandatory	Type	Description
dirty_data_strategy	No	String	<p>Dirty data policy of a job.</p> <ul style="list-style-type: none"> <li>• <b>2:obsDir:</b> Save. <b>obsDir</b> specifies the path for storing dirty data.</li> <li>• <b>1:</b> Trigger a job exception</li> <li>• <b>0:</b> Ignore</li> </ul> <p>The default value is <b>0</b>.</p>
udf_jar_url	No	String	Name of the resource package that has been uploaded to the DLI resource management system. The UDF Jar file of the SQL job is specified by this parameter.
manager_cu_number	No	Integer	Number of CUs in the JobManager selected for a job. The default value is <b>1</b> .
tm_cus	No	Integer	Number of CUs for each TaskManager. The default value is <b>1</b> .
tm_slot_num	No	Integer	Number of slots in each TaskManager. The default value is <b>(parallel_number*tm_cus)/(cu_number-manager_cu_number)</b> .
operator_config	No	String	Degree of parallelism (DOP) of an operator.
resume_checkpoint	No	Boolean	Whether the abnormal restart is recovered from the checkpoint.
resume_max_num	No	Integer	Maximum number of retry times upon exceptions. The unit is times/hour. Value range: -1 or greater than 0. The default value is <b>-1</b> , indicating that the number of times is unlimited.
static_estimator_config	No	String	<p>Traffic or hit ratio of each operator, which is a string in JSON format. Example:</p> <pre>{"operator_list": [{"id": "0a448493b4782967b150582570326227", "rate_factor": 0.55}, {"id": "6d2677a0ecc3fd8df0b72ec675edf8f4", "rate_factor": 1}, {"id": "ea632d67b7d595e5b851708ae9ad79d6", "rate_factor": 0.55}, {"id": "bc764cd8ddf7a0cff126f51c16239658", "output_rate": 2000}]} </pre>

Parameter	Mandatory	Type	Description
runtime_config	No	String	Customizes optimization parameters when a Flink job is running.

## Response

**Table 9-13** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.
job	No	Object	Information about job update. For details, see <a href="#">Table 9-14</a> .

**Table 9-14** job parameters

Parameter	Mandatory	Type	Description
update_time	No	Long	Job update time, expressed by milliseconds

## Example Request

Update an existing SQL job. The updated job is named **myjob** and runs on **testQueue** in shared mode.

```
{
  "name": "myjob",
  "desc": "My first job",
  "queue_name": "testQueue",
  "sql_body": "select * from source_table",
  "run_mode": "shared_cluster",
  "cu_number": 4,
  "parallel_number": 4,
  "checkpoint_enabled": false,
  "checkpoint_mode": "exactly_once",
  "checkpoint_interval": 10,
  "obs_bucket": "",
  "log_enabled": false,
  "smn_topic": "",
  "restart_when_exception": false,
  "idle_state_retention": 3600,
  "edge_group_ids": [
```

```
"62de1e1c-066e-48a8-a79d-f461a31b2ee1",
"2eb00f85-99f2-4144-bcb7-d39ff47f9002"
],
"dirty_data_strategy": "0",
"udf_jar_url": "group/test.jar"
}
```

## Example Response

```
{
  "is_success": "true",
  "message": "The job is updated successfully.",
  "job": {
    "update_time": 1578905682534
  }
}
```

## Status Codes

[Table 9-15](#) describes status codes.

**Table 9-15** Status codes

Status Code	Description
200	The job is updated successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.4 Creating a Flink Jar job

### Function

This API is used to create custom jobs, which currently support the JAR format and run in dedicated queues.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/flink-jobs
- Parameter description

**Table 9-16** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 9-17** Parameter description

Parameter	Mandatory	Type	Description
name	Yes	String	Name of the job. The value can contain 1 to 57 characters.
desc	No	String	Job description. Length range: 0 to 512 characters.
queue_name	No	String	Name of a queue. The value can contain 0 to 128 characters.
cu_number	No	Integer	Number of CUs selected for a job.
manager_cu_number	No	Integer	Number of CUs on the management node selected by the user for a job, which corresponds to the number of Flink job managers. The default value is 1.
parallel_number	No	Integer	Number of parallel operations selected for a job.
log_enabled	No	Boolean	Whether to enable the job log function. <ul style="list-style-type: none"><li>• <b>true</b>: indicates to enable the job log function.</li><li>• <b>false</b>: indicates to disable the job log function.</li><li>• Default value: <b>false</b></li></ul>
obs_bucket	No	String	OBS bucket where users are authorized to save logs when <b>log_enabled</b> is set to <b>true</b> .
smn_topic	No	String	SMN topic. If a job fails, the system will send a message to users subscribed to the SMN topic.
main_class	No	String	Job entry class.

Parameter	Mandatory	Type	Description
entrypoint_args	No	String	Job entry parameter. Multiple parameters are separated by spaces.
restart_when_exception	No	Boolean	Whether to enable the function of restart upon exceptions. The default value is <b>false</b> .
entrypoint	No	String	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize the JAR file where the job main class is located.
dependency_jars	No	Array of Strings	<p>Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize other dependency packages.</p> <p>Example: <b>myGroup/test.jar,myGroup/test1.jar</b>.</p>
dependency_files	No	Array of Strings	<p>Name of the resource package that has been uploaded to the DLI resource management system. This parameter is used to customize dependency files.</p> <p>Example: <b>myGroup/test.csv,myGroup/test1.csv</b>.</p> <p>You can add the following content to the application to access the corresponding dependency file: In the command, <b>fileName</b> indicates the name of the file to be accessed, and <b>ClassName</b> indicates the name of the class that needs to access the file.  <code>ClassName.class.getClassLoader().getResource("userData/ fileName")</code></p>
tm_cus	No	Integer	Number of CUs for each TaskManager. The default value is <b>1</b> .
tm_slot_num	No	Integer	Number of slots in each TaskManager. The default value is <b>(parallel_number*tm_cus)/(cu_number-manager_cu_number)</b> .
resume_checkpoint	No	Boolean	Whether the abnormal restart is recovered from the checkpoint.
resume_max_num	No	Integer	Maximum number of retry times upon exceptions. The unit is times/hour. Value range: -1 or greater than 0. The default value is <b>-1</b> , indicating that the number of times is unlimited.
checkpoint_path	No	String	Storage address of the checkpoint in the JAR file of the user. The path must be unique.

Parameter	Mandatory	Type	Description
tags	No	Array of Objects	Label of a Flink JAR job. For details, see <a href="#">Table 9-18</a> .
runtime_config	No	String	Customizes optimization parameters when a Flink job is running.

**Table 9-18** tags parameter

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key.
value	Yes	String	Tag key.

## Response

**Table 9-19** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.
job	No	Object	Information about the job status. For details, see <a href="#">Table 9-20</a> .

**Table 9-20** job parameters

Parameter	Mandatory	Type	Description
job_id	Yes	Long	Job ID.
status_name	No	String	Name of job status.
status_desc	No	String	Status description. Causes and suggestions for the abnormal status.

## Example Request

Create a Flink Jar job named **test**, set the job to be executed on **testQueue**, set the number of CUs used by the job, and enable the job log function.

```
{  
    "name": "test",  
    "desc": "job for test",  
    "queue_name": "testQueue",  
    "manager_cu_number": 1,  
    "cu_number": 2,  
    "parallel_number": 1,  
    "tm_cus": 1,  
    "tm_slot_num": 1,  
    "log_enabled": true,  
    "obs_bucket": "bucketName",  
    "smn_topic": "topic",  
    "main_class": "org.apache.flink.examples.streaming.JavaQueueStream",  
    "restart_when_exception": false,  
    "entrypoint": "javaQueueStream.jar",  
    "entrypoint_args": "-windowSize 2000 -rate 3",  
    "dependency_jars": [  
        "myGroup/test.jar",  
        "myGroup/test1.jar"  
    ],  
    "dependency_files": [  
        "myGroup/test.csv",  
        "myGroup/test1.csv"  
    ]  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "A Flink job is created successfully.",  
    "job": {  
        "job_id": 138,  
        "status_name": "job_init",  
        "status_desc": ""  
    }  
}
```

## Status Codes

[Table 9-21](#) describes status codes.

**Table 9-21** Status codes

Status Code	Description
200	The custom Flink job is created successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.5 Updating a Flink Jar Job

### Function

This API is used to update custom jobs, which currently support the JAR format and run in dedicated queues.

### URI

- URI format  
`PUT /v1.0/{project_id}/streaming/flink-jobs/{job_id}`
- Parameter description

**Table 9-22** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
job_id	Yes	Long	Job ID. Refer to <a href="#">Creating a Flink Jar job</a> to obtain the value.

### Request

**Table 9-23** Parameter description

Parameter	Mandatory	Type	Description
name	No	String	Name of the job. Length range: 0 to 57 characters.
desc	No	String	Job description. Length range: 0 to 512 characters.
queue_name	No	String	Name of a queue. Length range: 1 to 128 characters.
cu_number	No	Integer	Number of CUs selected for a job. The default value is 2.
manager_cu_number	No	Integer	Number of CUs on the management node selected by the user for a job, which corresponds to the number of Flink job managers. The default value is 1.

Parameter	Mandatory	Type	Description
parallel_number	No	Integer	Number of parallel operations selected for a job. The default value is 1.
log_enabled	No	Boolean	Whether to enable the job log function. <ul style="list-style-type: none"> <li>• <b>true</b>: indicates to enable the job log function.</li> <li>• <b>false</b>: indicates to disable the job log function.</li> <li>• Default value: <b>false</b></li> </ul>
obs_bucket	No	String	OBS path where users are authorized to save logs when <b>log_enabled</b> is set to <b>true</b> .
smn_topic	No	String	SMN topic. If a job fails, the system will send a message to users subscribed to the SMN topic.
main_class	No	String	Job entry class.
entrypoint_args	No	String	Job entry parameter. Multiple parameters are separated by spaces.
restart_when_exception	No	Boolean	Whether to enable the function of restart upon exceptions. The default value is <b>false</b> .
entrypoint	No	String	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize the JAR file where the job main class is located.
dependency_jars	No	Array of Strings	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize other dependency packages. Example: <b>myGroup/test.jar,myGroup/test1.jar</b> .
dependency_files	No	Array of Strings	Name of the resource package that has been uploaded to the DLI resource management system. This parameter is used to customize dependency files. Example: <b>myGroup/test.csv,myGroup/test1.csv</b> .
tm_cus	No	Integer	Number of CUs for each TaskManager. The default value is 1.

Parameter	Mandatory	Type	Description
tm_slot_num	No	Integer	Number of slots in each TaskManager. The default value is $(\text{parallel\_number} * \text{tm\_cus}) / (\text{cu\_number\_manager\_cu\_number})$ .
resume_checkpoint	No	Boolean	Whether the abnormal restart is recovered from the checkpoint.
resume_max_num	No	Integer	Maximum number of retry times upon exceptions. The unit is times/hour. Value range: -1 or greater than 0. The default value is -1, indicating that the number of times is unlimited.
checkpoint_path	No	String	Storage address of the checkpoint in the JAR file of the user. The path must be unique.
runtime_config	No	String	Customizes optimization parameters when a Flink job is running.
job_type	No	String	Job types.

## Response

**Table 9-24** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.
job	No	object	Information about job update. For details, see <a href="#">Table 9-25</a> .

**Table 9-25** job parameters

Parameter	Mandatory	Type	Description
update_time	No	Long	Time when a job is updated. The unit is millisecond.

## Example Request

Update the Flink Jar job information. After the update, the job name is **test1**, the job execution queue is **testQueue**, and the job log function is disabled.

```
{  
    "name": "test1",  
    "desc": "job for test",  
    "job_type": "flink_jar_job",  
    "queue_name": "testQueue",  
    "manager_cu_number": 1,  
    "cu_number": 2,  
    "parallel_number": 1,  
    "log_enabled": false,  
    "main_class": "org.apache.flink.examples.streaming.JavaQueueStream",  
    "restart_when_exception": false,  
    "entrypoint": "FemaleInfoCollec.jar",  
    "dependency_jars": [  
        "myGroup/test.jar",  
        "myGroup/test1.jar"  
    ],  
    "dependency_files": [  
        "myGroup/test.csv",  
        "myGroup/test1.csv"  
    ]  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "The Flink job is updated successfully.",  
    "job": {  
        "update_time": 1516952770835  
    }  
}
```

## Status Codes

[Table 9-26](#) describes status codes.

**Table 9-26** Status codes

Status Code	Description
200	The custom Flink job is updated successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.6 Running Jobs in Batches

### Function

This API is used to trigger batch job running.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/jobs/run
- Parameter description

**Table 9-27** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 9-28** Request parameters

Parameter	Mandatory	Type	Description
job_ids	Yes	Array of Long	Batch job ID. You can obtain the job ID by calling the API for creating a job or the API for querying a job.
resume_savepoint	No	Boolean	Whether to restore a job from the latest savepoint. <ul style="list-style-type: none"><li>• If <b>resume_savepoint</b> is set to <b>true</b>, the job is restored from the latest savepoint.</li><li>• If <b>resume_savepoint</b> is set to <b>false</b>, the job is started normally, not from a specific savepoint.</li></ul> The default value is <b>false</b> .

## Response

**Table 9-29** Response parameters

Parameter	Mandatory	Type	Description
Array elements	No	Array of Objects	The response message returned is as follows: For details, see <a href="#">Table 9-30</a> .

**Table 9-30** Array element parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.

## Example Request

Run the jobs whose IDs are **131**, **130**, **138**, and **137** and allow the jobs to be restored from their latest savepoints.

```
{  
    "job_ids": [131,130,138,137],  
    "resume_savepoint": true  
}
```

## Example Response

```
[  
    {  
        "is_success": "true",  
        "message": "The request for submitting DLI jobs is delivered successfully."  
    },  
    {  
        "is_success": "true",  
        "message": "The request for submitting DLI jobs is delivered successfully."  
    },  
    {  
        "is_success": "true",  
        "message": "The request for submitting DLI jobs is delivered successfully."  
    },  
    {  
        "is_success": "true",  
        "message": "The request for submitting DLI jobs is delivered successfully."  
    }  
]
```

## Status Codes

[Table 9-31](#) describes status codes.

**Table 9-31** Status codes

Status Code	Description
200	Jobs are successfully run in batches.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.7 Querying the Job List

### Function

This API is used to query the list of the current user's jobs. You can set the job ID as the ID and query jobs whose IDs are greater than or less than the ID. You can also query jobs in specific status, for example, in running status or other. By default, all jobs are queried.

### URI

- URI format  
GET /v1.0/{project\_id}/streaming/jobs
- Parameter description

**Table 9-32** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 9-33** query parameter description

Parameter	Mandatory	Type	Description
job_type	No	String	Job type. <ul style="list-style-type: none"><li>• <b>flink_sql_job</b>: Flink SQL job</li><li>• <b>flink_jar_job</b>: User-defined Flink job</li></ul>

Parameter	Mandatory	Type	Description
status	No	String	<p>Job status code.</p> <p>Available job statuses are as follows:</p> <ul style="list-style-type: none"> <li>• <b>job_init</b>: The job is in the draft status.</li> <li>• <b>job_submitting</b>: The job is being submitted.</li> <li>• <b>job_submit_fail</b>: The job fails to be submitted.</li> <li>• <b>job_running</b>: The job is running. (After the job is submitted, a normal result is returned.)</li> <li>• <b>job_running_exception</b> (The job stops running due to an exception.)</li> <li>• <b>job_downloading</b>: The job is being downloaded.</li> <li>• <b>job_idle</b>: The job is idle.</li> <li>• <b>job_cancelling</b>: The job is being stopped.</li> <li>• <b>job_cancel_success</b>: The job has been stopped.</li> <li>• <b>job_cancel_fail</b>: The job fails to be stopped.</li> <li>• <b>job_savepointing</b>: The savepoint is being created.</li> <li>• <b>job_finish</b>: The job is completed.</li> </ul>
queue_name	No	String	Name of a queue.
order	No	String	<p>Sorting style of the query results.</p> <ul style="list-style-type: none"> <li>• <b>asc</b>: by time in ascending order</li> <li>• <b>desc</b>: by time in descending order</li> </ul> <p>The default value is <b>desc</b>.</p>
limit	No	Integer	<p>Number of returned data records.</p> <p>The default value is <b>10</b> and the maximum value is <b>100</b>.</p>
name	No	String	Name of the job. Length range: 0 to 57 characters.
offset	No	Integer	Job offset.

Parameter	Mandatory	Type	Description
show_detail	No	Boolean	Whether to return job details. The default value is <b>false</b> . If this parameter is set to <b>true</b> , the job details are returned. For details, see <a href="#">Querying Job Details</a> .
user_name	No	String	Username, which can be used as a filter.
tags	No	String	Specifies a label for filtering.

## Request

None

## Response

**Table 9-34** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_list	No	Object	Information about a job list. For details, see <a href="#">Table 9-35</a> .

**Table 9-35** job\_list parameters

Parameter	Mandatory	Type	Description
total_count	No	Integer	Number of records in the query result.
jobs	No	Array of Objects	Information about a job. For details, see <a href="#">Table 9-36</a> .

**Table 9-36 Jobs parameters**

Parameter	Mandatory	Type	Description
job_id	No	Long	Job ID.
name	No	String	Name of the job. Length range: 0 to 57 characters.
desc	No	String	Job description. Length range: 0 to 512 characters.
user_name	No	String	Username. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .
job_type	No	String	Job type. <ul style="list-style-type: none"><li>• <b>flink_sql_job</b>: Flink SQL job</li><li>• <b>flink_jar_job</b>: User-defined Flink job</li></ul>
status	No	String	Job status.
status_desc	No	String	Description of job status.
create_time	No	Long	Time when a job is created.
start_time	No	Long	Time when a job is started. The value <b>0</b> indicates that the process is not started.
duration	No	Long	Running duration of a job. Unit: ms. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .
root_id	No	Long	Parent job ID. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .
graph_editor_enabled	No	Boolean	Whether the flow diagram can be edited. Value <b>true</b> indicates that the flow diagram can be edited, and <b>false</b> indicates that the flow diagram cannot be edited.
has_savepoint	No	Boolean	Whether a job has a savepoint. Value <b>true</b> indicates that the job has a savepoint, and <b>false</b> indicates that the job does not have a savepoint.
user_id	No	String	ID of the user who creates the job. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> .
project_id	No	String	ID of the project to which a job belongs. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> .

Parameter	Mandatory	Type	Description
sql_body	No	String	Stream SQL statement. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .
run_mode	No	String	Job running mode. The options are as follows: The value can be <b>shared_cluster</b> , <b>exclusive_cluster</b> , or <b>edge_node</b> . This parameter is valid only when <b>show_detail</b> is set to <b>true</b> . <ul style="list-style-type: none"> <li>• <b>shared_cluster</b>: indicates that the job is running on a shared cluster.</li> <li>• <b>exclusive_cluster</b>: indicates that the job is running on an exclusive cluster.</li> <li>• <b>edge_node</b>: indicates that the job is running on an edge node.</li> </ul>
job_config	No	Object	Job configuration. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> . For details, see <a href="#">Table 9-37</a> .
main_class	No	String	Main class of a JAR package. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .
entrypoint_args	No	String	Job running parameter of the JAR file. Multiple parameters are separated by spaces. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> .
execution_graph	No	String	Job execution plan. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .
update_time	No	Long	Time when a job is updated. This parameter is valid only when <b>show_detail</b> is set to <b>false</b> .

**Table 9-37 job\_config parameters**

Parameter	Mandatory	Type	Description
checkpoint_enabled	No	Boolean	Whether to enable the automatic job snapshot function. <ul style="list-style-type: none"> <li>• <b>true</b>: The automatic job snapshot function is enabled.</li> <li>• <b>false</b>: The automatic job snapshot function is disabled.</li> </ul> The default value is <b>false</b> .

Parameter	Man dato ry	Type	Description
checkpoint_mo de	No	String	Snapshot mode. There are two options: <ul style="list-style-type: none"> <li>• <b>exactly_once</b>: indicates that data is processed only once.</li> <li>• <b>at_least_once</b>: indicates that data is processed at least once.</li> </ul> The default value is <b>exactly_once</b> .
checkpoint_inte rval	No	Integer	Snapshot interval. The unit is second. The default value is <b>10</b> .
log_enabled	No	Boolean	Whether to enable the log storage function. The default value is <b>false</b> .
obs_bucket	No	String	Name of an OBS bucket.
smn_topic	No	String	SMN topic name. If a job fails, the system will send a message to users subscribed to the SMN topic.
root_id	No	Integer	Parent job ID.
edge_group_ids	No	Array of Strings	List of edge computing group IDs. Use commas (,) to separate multiple IDs.
manager_cu_nu mber	No	Integer	Number of CUs of the management unit. The default value is <b>1</b> .
cu_number	No	Integer	Number of CUs selected for a job. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> . <ul style="list-style-type: none"> <li>• Minimum value: <b>2</b></li> <li>• Maximum value: <b>400</b></li> </ul> The default value is <b>2</b> .
parallel_numbe r	No	Integer	Number of concurrent jobs set by a user. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> . <ul style="list-style-type: none"> <li>• Minimum value: <b>1</b></li> <li>• Maximum value: <b>2000</b></li> </ul> The default value is <b>1</b> .
restart_when_e xception	No	Boolean	Whether to enable the function of restart upon exceptions.
idle_state_reten tion	No	Integer	Expiration time.

Parameter	Man dato ry	Type	Description
udf_jar_url	No	String	Name of the package that has been uploaded to the DLI resource management system. The <b>UDF Jar</b> file of the SQL job is uploaded through this parameter.
dirty_data_strategy	No	String	Dirty data policy of a job. <ul style="list-style-type: none"><li>• <b>2:obsDir:</b> Save. <b>obsDir</b> specifies the path for storing dirty data.</li><li>• <b>1:</b> Trigger a job exception</li><li>• <b>0:</b> Ignore</li></ul>
entrypoint	No	String	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize the JAR file where the job main class is located.
dependency_jars	No	Array of Strings	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize other dependency packages.
dependency_files	No	Array of Strings	Name of the resource package that has been uploaded to the DLI resource management system. This parameter is used to customize dependency files.
executor_number	No	Integer	Number of compute nodes in a job.
executor_cu_number	No	Integer	Number of CUs in a compute node.
resume_checkpoint	No	Boolean	Whether to restore data from the latest checkpoint when the system automatically restarts upon an exception. The default value is <b>false</b> .

## Status Codes

[Table 9-38](#) describes the status code.

**Table 9-38** Status codes

Status Code	Description
200	Job list query succeeds.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 9.8 Querying Job Details

## Function

This API is used to query details of a job.

## URI

- URI format  
GET /v1.0/{project\_id}/streaming/jobs/{job\_id}
- Parameter description

**Table 9-39** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
job_id	Yes	String	Job ID.

## Request

None

## Response

**Table 9-40** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_detail	No	Object	Job details. For details, see <a href="#">Table 9-41</a> .

**Table 9-41** job\_detail parameters

Parameter	Mandatory	Type	Description
job_id	No	Long	Job ID.
name	No	String	Name of the job. Length range: 0 to 57 characters.
desc	No	String	Job description. Length range: 0 to 512 characters.
job_type	No	String	Job type. <ul style="list-style-type: none"><li>• <b>flink_sql_job</b>: Flink SQL job</li><li>• <b>flink_jar_job</b>: User-defined Flink job</li></ul>

Parameter	Mandatory	Type	Description
status	No	String	<p>Job status.</p> <p>Available job statuses are as follows:</p> <ul style="list-style-type: none"> <li>• <b>job_init</b>: The job is in the draft status.</li> <li>• <b>job_submitting</b>: The job is being submitted.</li> <li>• <b>job_submit_fail</b>: The job fails to be submitted.</li> <li>• <b>job_running</b>: The job is running. (After the job is submitted, a normal result is returned.)</li> <li>• <b>job_running_exception</b> (The job stops running due to an exception.)</li> <li>• <b>job_downloading</b>: The job is being downloaded.</li> <li>• <b>job_idle</b>: The job is idle.</li> <li>• <b>job_cancelling</b>: The job is being stopped.</li> <li>• <b>job_cancel_success</b>: The job has been stopped.</li> <li>• <b>job_cancel_fail</b>: The job fails to be stopped.</li> <li>• <b>job_savepointing</b>: The savepoint is being created.</li> <li>• <b>job_finish</b>: The job is completed.</li> </ul>
status_desc	No	String	Description of job status.
create_time	No	Long	Time when a job is created.
start_time	No	Long	Time when a job is started.
user_id	No	String	ID of the user who creates the job.
queue_name	No	String	Name of a queue. Length range: 1 to 128 characters.
project_id	No	String	ID of the project to which a job belongs.
sql_body	No	String	Stream SQL statement.
savepoint_path	No	String	Path for storing manually generated checkpoints.

Parameter	Mandatory	Type	Description
run_mode	No	String	Job running mode. The options are as follows: <ul style="list-style-type: none"> <li>• <b>shared_cluster</b>: indicates that the job is running on a shared cluster.</li> <li>• <b>exclusive_cluster</b>: indicates that the job is running on an exclusive cluster.</li> <li>• <b>edge_node</b>: indicates that the job is running on an edge node.</li> </ul>
job_config	No	Object	Job configurations. Refer to <a href="#">Table 9-42</a> for details.
main_class	No	String	Main class of a JAR package, for example, <b>org.apache.spark.examples.streaming.JavaQueueStream</b> .
entrypoint_args	No	String	Running parameter of a JAR package job. Multiple parameters are separated by spaces.
execution_graph	No	String	Job execution plan.
update_time	No	Long	Time when a job is updated.

**Table 9-42 job\_config parameters**

Parameter	Mandatory	Type	Description
checkpoint_enabled	No	Boolean	Whether to enable the automatic job snapshot function. <ul style="list-style-type: none"> <li>• <b>true</b>: The automatic job snapshot function is enabled.</li> <li>• <b>false</b>: The automatic job snapshot function is disabled.</li> </ul> The default value is <b>false</b> .
checkpoint_interval	No	Integer	Snapshot interval. The unit is second. The default value is <b>10</b> .

Parameter	Man dato ry	Type	Description
checkpoint_mo de	No	String	Snapshot mode. There are two options: <ul style="list-style-type: none"> <li>• <b>exactly_once</b>: indicates that data is processed only once.</li> <li>• <b>at_least_once</b>: indicates that data is processed at least once.</li> </ul> The default value is <b>exactly_once</b> .
log_enabled	No	Boolean	Whether to enable the log storage function. The default value is <b>false</b> .
obs_bucket	No	String	Name of an OBS bucket.
root_id	No	Integer	Parent job ID.
edge_group_ids	No	Array of Strings	List of edge computing group IDs. Use commas (,) to separate multiple IDs.
manager_cu_nu mber	No	Integer	Number of CUs of the management unit. The default value is <b>1</b> .
graph_editor_e nabled	No	Boolean	Whether to enable flow diagram editing. The default value is <b>false</b> .
graph_editor_d ata	No	String	Data of flow diagram editing. The default value is <b>null</b> .
executor_numb er	No	Integer	Number of compute nodes in a job.
executor_cu_nu mber	No	Integer	Number of CUs in a compute node.
cu_number	No	Integer	Number of CUs selected for a job. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> . <ul style="list-style-type: none"> <li>• Minimum value: <b>2</b></li> <li>• Maximum value: <b>400</b></li> </ul> The default value is <b>2</b> .
parallel_numbe r	No	Integer	Number of concurrent jobs set by a user. This parameter is valid only when <b>show_detail</b> is set to <b>true</b> . <ul style="list-style-type: none"> <li>• Minimum value: <b>1</b></li> <li>• Maximum value: <b>2000</b></li> </ul> The default value is <b>1</b> .
smn_topic	No	String	SMN topic name. If a job fails, the system will send a message to users subscribed to this SMN topic.

Parameter	Man dato ry	Type	Description
restart_when_e xception	No	Boolean	Whether to enable the function of restart upon exceptions.
resume_checkp oint	No	Boolean	Whether to restore data from the latest checkpoint when the system automatically restarts upon an exception. The default value is <b>false</b> .
resume_max_n um	No	Integer	Maximum retry attempts. <b>-1</b> indicates there is no upper limit.
checkpoint_pa th	No	String	Path for saving the checkpoint.
idle_state_rete nition	No	Integer	Expiration time.
config_url	No	String	OBS path of the <b>config</b> package uploaded by the user.
udf_jar_url	No	String	Name of the package that has been uploaded to the DLI resource management system. The <b>UDF Jar</b> file of the SQL job is uploaded through this parameter.
dirty_data_strat egy	No	String	Dirty data policy of a job. <ul style="list-style-type: none"> <li>• <b>2:obsDir:</b> Save. <b>obsDir</b> specifies the path for storing dirty data.</li> <li>• <b>1:</b> Trigger a job exception</li> <li>• <b>0:</b> Ignore</li> </ul>
entrypoint	No	String	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize the JAR file where the job main class is located.
dependency_jar s	No	Array of Strings	Name of the package that has been uploaded to the DLI resource management system. This parameter is used to customize other dependency packages.
dependency_fil es	No	Array of Strings	Name of the resource package that has been uploaded to the DLI resource management system. This parameter is used to customize dependency files.
tm_cus	No	int	Number of CUs per TaskManager node.
tm_slot_num	No	int	Number of slots per TaskManager node.

Parameter	Man dato ry	Type	Description
operator_config	No	String	Operator's parallelism degree. The operator ID and degree of parallelism are displayed in JSON format.
static_estimator_config	No	String	Estimation of static flow diagram resources.
runtime_config	No	String	Customizes optimization parameters when a Flink job is running.

## Example Request

None

## Example Response

- The following example takes the **flink\_jar\_job** type as an example:

```
{
  "is_success": "true",
  "message": "Job detail query succeeds.",
  "job_detail": {
    "job_id": 104,
    "user_id": "011c99a26ae84a1bb963a75e7637d3fd",

```

## Status Codes

[Table 9-43](#) describes the status code.

**Table 9-43** Status codes

Status Code	Description
200	Querying details of a job succeeds.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 9.9 Querying the Job Execution Plan

## Function

This API is used to query a job execution plan.

## URI

- URI format  
GET /v1.0/{project\_id}/streaming/jobs/{job\_id}/execute-graph
- Parameter description

**Table 9-44** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

Parameter	Mandatory	Type	Description
job_id	Yes	Long	Job ID.

## Request

None

## Response

**Table 9-45** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successful.
message	No	String	Message content.
execute_graph	No	Object	Response parameter for querying a job plan. For details, see <a href="#">Table 9-46</a> .

**Table 9-46** execute\_graph parameters

Parameter	Mandatory	Type	Description
jid	No	String	ID of a Flink job.
name	No	String	Name of a Flink job.
isStoppable	No	Boolean	Whether a job can be stopped.
state	No	String	Execution status of a job.
start-time	No	Long	Time when a job is started.
end-time	No	Long	Time when a job is stopped.
duration	No	Long	Running duration of a job.

## Example Request

None

## Example Response

```
{
  "is_success": "true",
```

```
"message": "Querying the job execution graph succeeds.",
"execute_graph": {
    "jid": "4e966f43f2c90b0e1bf3188ecf55504b",
    "name": "",
    "isStoppable": false,
    "state": "RUNNING",
    "start-time": 1578904488436,
    "end-time": -1,
    "duration": 516274
}
```

## Status Codes

**Table 9-47** Status codes

Status Code	Description
200	Querying the job execution plan succeeds.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.10 Stopping Jobs in Batches

### Function

This API is used to stop running jobs in batches.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/jobs/stop
- Parameter description

**Table 9-48** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 9-49** Request parameters

Parameter	Mandatory	Type	Description
job_ids	Yes	Array of Long	Job ID.
trigger_savepoint	No	Boolean	Whether to create a savepoint for a job to store the job status information before stopping it. The data type is Boolean. <ul style="list-style-type: none"><li>● If this parameter is set to <b>true</b>, a savepoint is created.</li><li>● If this parameter is set to <b>false</b>, no savepoint is created. The default value is <b>false</b>.</li></ul>

## Response

**Table 9-50** Response parameters

Parameter	Mandatory	Type	Description
Array elements	No	Array of Objects	The response message returned is as follows: For details, see <a href="#">Table 9-51</a> .

**Table 9-51** Array element parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content

## Example Request

Stop the jobs whose IDs are **128** and **137**.

```
{  
  "job_ids": [128, 137],  
  "trigger_savepoint": false  
}
```

## Example Response

```
[{"is_success": "true",  
 "message": "The request for stopping DLI jobs is delivered successfully."}]
```

## Status Codes

[Table 9-52](#) describes status codes.

**Table 9-52** Status codes

Status Code	Description
200	The request of stopping a job is sent successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.11 Deleting a Job

### Function

This API is used to delete a Flink job at any state.

#### NOTE

The job records will not be deleted.

### URI

- URI format  
`DELETE /v1.0/{project_id}/streaming/jobs/{job_id}`
- Parameter description

**Table 9-53** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
job_id	Yes	Long	Job ID.

## Request

None

## Response

**Table 9-54** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

None

## Example Response

```
{  
    "is_success": "true",  
    "message": "The job is deleted successfully.",  
}
```

## Status Code

[Table 9-55](#) describes status codes.

**Table 9-55** Status codes

Status Code	Description
200	The job is deleted successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.12 Deleting Jobs in Batches

### Function

This API is used to batch delete jobs at any state.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/jobs/delete
- Parameter description

**Table 9-56** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 9-57** Request parameters

Parameter	Mandatory	Type	Description
job_ids	Yes	[Long]	Job ID.

### Response

**Table 9-58** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

Delete the jobs whose IDs are **12** and **232**.

```
{  
    "job_ids": [12,232]  
}
```

## Example Response

```
[{  
    "is_success": "true",  
    "message": "The job is deleted successfully.",  
}]
```

## Status Codes

[Table 9-59](#) describes status codes.

**Table 9-59** Status codes

Status Code	Description
200	The job is deleted successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.13 Exporting a Flink Job

### Function

This API is used to export Flink job data.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/jobs/export
- Parameter description

**Table 9-60** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 9-61** Request parameters

Parameter	Mandatory	Type	Description
obs_dir	Yes	String	OBS path for storing exported job files.
is_selected	Yes	Boolean	Whether to export a specified job.
job_selected	No	Array of Longs	This parameter indicates the ID set of jobs to be exported if <b>is_selected</b> is set to <b>true</b> . <b>NOTE</b> This parameter is mandatory when <b>is_selected</b> is set to <b>true</b> .

## Response

**Table 9-62** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
zip_file	No	Array of Strings	Name of the ZIP package containing exported jobs. The ZIP package is stored on OBS.

## Example Request

Export the job whose ID is **100** to OBS.

```
{  
    "obs_dir": "obs-test",
```

```
        "is_selected": true,  
        "job_selected": [100]  
    }
```

## Example Response

```
{  
    "is_success": true,  
    "message": "The job is exported successfully.",  
    "zip_file": ["obs-test/aggregate_1582677879475.zip"]  
}
```

## Status Codes

[Table 9-63](#) describes status codes.

**Table 9-63** Status codes

Status Code	Description
200	The job is exported successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 9.14 Importing a Flink Job

### Function

This API is used to import Flink job data.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/jobs/import
- Parameter description

**Table 9-64** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 9-65** Request parameters

Parameter	Mandatory	Type	Description
zip_file	Yes	String	<p>Path of the job ZIP file imported from OBS. You can enter a folder path to import all ZIP files in the folder.</p> <p><b>NOTE</b> The folder can contain only .zip files.</p>
is_cover	No	Boolean	Whether to overwrite an existing job if the name of the imported job is the same as that of the existing job in the service.

## Response

**Table 9-66** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_mapping	No	Array of Objects	Information about the imported job. For details, see <a href="#">Table 9-67</a> .

**Table 9-67** job\_mapping parameter description

Parameter	Mandatory	Type	Description
old_job_id	No	Long	ID of a job before being imported.
new_job_id	No	Long	ID of a job after being imported. If <b>is_cover</b> is set to <b>false</b> and a job with the same name exists in the service, the returned value of this parameter is <b>-1</b> .
remark	No	String	Results about an imported job.

## Example Request

Whether to overwrite the existing job if the name of the imported job is the same as that of an existing job when Flink job data is imported from OBS.

```
{  
    "zip_file": "test/gggregate_1582677879475.zip",  
    "is_cover": true  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "The job is imported successfully.",  
    "job_mapping": [  
        {  
            "old_job_id": "100",  
            "new_job_id": "200",  
            "remark": "Job successfully created"  
        }  
    ]  
}
```

## Status Codes

[Table 9-68](#) describes status codes.

**Table 9-68** Status codes

Status Code	Description
200	The job is imported successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 10 APIs Related to Spark jobs

---

## 10.1 Batch Processing-related APIs

### 10.1.1 Creating a Batch Processing Job

#### Function

This API is used to create a batch processing job in a queue.

#### URI

- URI format  
POST /v2.0/{project\_id}/batches
- Parameter description

**Table 10-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 10-2** Request parameters

Parameter	Mandatory	Type	Description
file	Yes	String	Name of the package that is of the JAR or pyFile type and has been uploaded to the DLI resource management system. You can also specify an OBS path, for example, <b>obs://Bucket name/Package name</b> .
className	Yes	String	Java/Spark main class of the batch processing job.
queue	No	String	Queue name. Set this parameter to the name of the created DLI queue. The queue must be of the general-purpose type. <b>NOTE</b> <ul style="list-style-type: none"> <li>This parameter is compatible with the <b>cluster_name</b> parameter. That is, if <b>cluster_name</b> is used to specify a queue, the queue is still valid.</li> <li>You are advised to use the <b>queue</b> parameter. The <b>queue</b> and <b>cluster_name</b> parameters cannot coexist.</li> </ul>
cluster_name	No	String	Queue name. Set this parameter to the created DLI queue name. <b>NOTE</b> You are advised to use the <b>queue</b> parameter. The <b>queue</b> and <b>cluster_name</b> parameters cannot coexist.
args	No	Array of Strings	Input parameters of the main class, that is, application parameters.
sc_type	No	String	Compute resource type. Currently, resource types A, B, and C are available. If this parameter is not specified, the minimum configuration (type A) is used. For details about resource types, see <a href="#">Table 10-3</a> .
jars	No	Array of Strings	Name of the package that is of the JAR type and has been uploaded to the DLI resource management system. You can also specify an OBS path, for example, <b>obs://Bucket name/Package name</b> .
pyFiles	No	Array of Strings	Name of the package that is of the PyFile type and has been uploaded to the DLI resource management system. You can also specify an OBS path, for example, <b>obs://Bucket name/Package name</b> .

Parameter	Mandatory	Type	Description
files	No	Array of Strings	Name of the package that is of the file type and has been uploaded to the DLI resource management system. You can also specify an OBS path, for example, <b>obs://Bucket name/Package name</b> .
modules	No	Array of Strings	<p>Name of the dependent system resource module. You can view the module name using the API related to <a href="#">Querying Resource Packages in a Group</a>.</p> <p>DLI provides dependencies for executing datasource jobs. The following table lists the dependency modules corresponding to different services.</p> <ul style="list-style-type: none"><li>• CloudTable/MRS HBase: sys.datasource.hbase</li><li>• CloudTable/MRS OpenTSDB: sys.datasource.opentsdb</li><li>• RDS MySQL: sys.datasource.rds</li><li>• RDS Postgre: preset</li><li>• DWS: preset</li><li>• CSS: sys.datasource.css</li></ul>
resources	No	Array of Objects	JSON object list, including the name and type of the JSON package that has been uploaded to the queue. For details, see <a href="#">Table 10-4</a> .
groups	No	Array of Objects	JSON object list, including the package group resource. For details about the format, see the request example. If the type of the <b>name</b> in <b>resources</b> is not verified, the package with the name exists in the group. For details, see <a href="#">Table 10-5</a> .
conf	No	Object	<b>Batch</b> configuration item.
name	No	String	Batch processing task name. The value contains a maximum of 128 characters.
driverMemory	No	String	Driver memory of the Spark application, for example, <b>2 GB</b> and <b>2048 MB</b> . This configuration item replaces the default parameter in <b>sc_type</b> . The unit must be provided. Otherwise, the startup fails.
driverCores	No	Integer	Number of CPU cores of the Spark application driver. This configuration item replaces the default parameter in <b>sc_type</b> .

Parameter	Mandatory	Type	Description
executorMemory	No	String	Executor memory of the Spark application, for example, <b>2 GB</b> and <b>2048 MB</b> . This configuration item replaces the default parameter in <b>sc_type</b> . The unit must be provided. Otherwise, the startup fails.
executorCores	No	Integer	Number of CPU cores of each Executor in the Spark application. This configuration item replaces the default parameter in <b>sc_type</b> .
numExecutors	No	Integer	Number of Executors in a Spark application. This configuration item replaces the default parameter in <b>sc_type</b> .
obs_bucket	No	String	OBS bucket for storing the Spark jobs. Set this parameter when you need to save jobs.
auto_recovery	No	Boolean	Whether to enable the retry function. If enabled, Spark jobs will be automatically retried after an exception occurs. The default value is <b>false</b> .
max_retry_times	No	Integer	Maximum retry times. The maximum value is <b>100</b> , and the default value is <b>20</b> .
catalog_name	No	String	To access metadata, set this parameter to <b>dli</b> .

**Table 10-3** Resource types

Resource Type	Physical Resource	driverCores	executorCores	driverMemory	executorMemory	numExecutor
A	8 vCPUs, 32-GB memory	2	1	7 GB	4 GB	6
B	16 vCPUs, 64-GB memory	2	2	7 GB	8 GB	7
C	32 vCPUs, 128-GB memory	4	2	15 GB	8 GB	14

**Table 10-4 resources parameters**

Parameter	Mandatory	Type	Description
name	No	String	Resource name You can also specify an OBS path, for example, <b>obs://Bucket name/Package name.</b>
type	No	String	Resource type.

**Table 10-5 groups parameters**

Parameter	Mandatory	Type	Description
name	No	String	User group name
resources	No	Array of Objects	User group resource For details, see <a href="#">Table 10-4</a> .

## Response

**Table 10-6 Response parameters**

Parameter	Mandatory	Type	Description
id	No	String	ID of a batch processing job.
appld	No	String	Back-end application ID of a batch processing job.
name	No	String	Batch processing task name. The value contains a maximum of 128 characters.
owner	No	String	Owner of a batch processing job.
proxyUser	No	String	Proxy user (resource tenant) to which a batch processing job belongs.
state	No	String	Status of a batch processing job. For details, see <a href="#">Table 10-7</a> .
kind	No	String	Type of a batch processing job. Only Spark parameters are supported.
log	No	Array of strings	Last 10 records of the current batch processing job.

Parameter	Mandatory	Type	Description
sc_type	No	String	Type of a computing resource. If the computing resource type is customized, value <b>CUSTOMIZED</b> is returned.
cluster_name	No	String	Queue where a batch processing job is located.
queue	Yes	String	Queue name. Set this parameter to the name of the created DLI queue. <b>NOTE</b> <ul style="list-style-type: none"><li>This parameter is compatible with the <b>cluster_name</b> parameter. That is, if <b>cluster_name</b> is used to specify a queue, the queue is still valid.</li><li>You are advised to use the <b>queue</b> parameter. The <b>queue</b> and <b>cluster_name</b> parameters cannot coexist.</li></ul>
create_time	No	Long	Time when a batch processing job is created. The timestamp is expressed in milliseconds.
update_time	No	Long	Time when a batch processing job is updated. The timestamp is expressed in milliseconds.
duration	No	Long	Job running duration (unit: millisecond)

**Table 10-7** Batch processing job statuses

Parameter	Type	Description
starting	String	The batch processing job is being started.
running	String	The batch processing job is executing a task.
dead	String	The batch processing job has exited.
success	String	The batch processing job is successfully executed.
recovering	String	The batch processing job is being restored.

## Example Request

Create a Spark job. Set the Spark main class of the job to **org.apache.spark.examples.SparkPi**, specify the program package to **batchTest/spark-examples\_2.11-2.1.0.luxor.jar**, and load the program package whose type is **jar** and the resource package whose type is **files**.

```
{  
  "file": "batchTest/spark-examples_2.11-2.1.0.luxor.jar",
```

```

    "className": "org.apache.spark.examples.SparkPi",
    "sc_type": "A",
    "jars": ["demo-1.0.0.jar"],
    "files": ["count.txt"],
    "resources": [
        {"name": "groupTest/testJar.jar", "type": "jar"},
        {"name": "kafka-clients-0.10.0.0.jar", "type": "jar"}],
    "groups": [
        {"name": "groupTestJar", "resources": [{"name": "testJar.jar", "type": "jar"}, {"name": "testJar1.jar", "type": "jar"}]},
        {"name": "batchTest", "resources": [{"name": "luxor.jar", "type": "jar"}]}],
    "queue": "test",
    "name": "TestDemo4"
}

}

```

#### NOTE

The **batchTest/spark-examples\_2.11-2.1.0.luxor.jar** file has been uploaded through API involved in [Uploading a Package Group](#).

## Example Response

```
{
    "id": "07a3e4e6-9a28-4e92-8d3f-9c538621a166",
    "appId": "",
    "name": "",
    "owner": "test1",
    "proxyUser": "",
    "state": "starting",
    "kind": "",
    "log": [],
    "sc_type": "CUSTOMIZED",
    "cluster_name": "aaa",
    "queue": "aaa",
    "create_time": 1607589874156,
    "update_time": 1607589874156
}
```

## Status Codes

[Table 10-8](#) describes the status code.

**Table 10-8** Status code

Status Code	Description
200	The job is created successfully.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 10.1.2 Canceling a Batch Processing Job

### Function

This API is used to cancel a batch processing job.

#### NOTE

Batch processing jobs in the **Successful** or **Failed** state cannot be canceled.

### URI

- URI format  
`DELETE /v2.0/{project_id}/batches/{batch_id}`
- Parameter description

**Table 10-9** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
batch_id	Yes	String	ID of a batch processing job. Set the value to the job ID obtained in <a href="#">Creating a Batch Processing Job</a> .

### Request

None

### Response

**Table 10-10** Response parameter

Parameter	Mandatory	Type	Description
msg	No	String	If the batch processing job is successfully canceled, value <b>deleted</b> is returned.

### Example Request

None

## Example Response

```
{  
  "msg": "deleted"  
}
```

## Status Codes

[Table 10-11](#) describes the status code.

**Table 10-11** Status codes

Status Code	Description
200	Deletion succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 10.1.3 Obtaining the List of Batch Processing Jobs

#### Function

This API is used to obtain the list of batch processing jobs in a queue of a project.

#### URI

- URI format  
GET /v2.0/{project\_id}/batches
- Parameter description

**Table 10-12** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 10-13** query parameter description

Parameter	Mandatory	Type	Description
job_name	No	String	Name of a batch processing job.
job_id	No	String	This API is used to query a batch job based on the job ID.
cluster_name	No	String	DLI queue name. If this parameter is left blank, the names of all batch processing jobs in the current project are obtained. You are advised to specify this parameter, instead of leaving it blank.
queue_name	No	String	DLI queue name. You can query batch jobs based on the queue name. This method is recommended.
from	No	Integer	Index number of the start batch processing job. By default, the index number starts from 0.
size	No	Integer	Number of batch processing jobs to be queried
state	No	String	Query batch jobs by job status.
owner	No	String	User who submits a job.

## Request

None

## Response

**Table 10-14** Response parameters

Parameter	Mandatory	Type	Description
from	No	Integer	Index number of the start batch processing job.
total	No	Integer	Total number of batch processing jobs.
sessions	No	Array of objects	Batch job information. For details, see <a href="#">Table 10-6 in Creating a Batch Processing Job</a> .
create_time	No	Long	Time when a batch processing job is created.

**Table 10-15** sessions parameters

Parameter	Mandatory	Type	Description
duration	No	Long	Job running duration (unit: millisecond)
id	No	String	ID of a batch processing job.
state	No	String	Status of a batch processing job
appId	No	String	Back-end application ID of a batch processing job
log	No	Array of Strings	Last 10 records of the current batch processing job
sc_type	No	String	Type of a computing resource. If the computing resource type is customized, value <b>CUSTOMIZED</b> is returned.
cluster_name	No	String	Queue where a batch processing job is located.
create_time	No	Long	Time when a batch processing job is created. The timestamp is in milliseconds.
name	No	String	Name of a batch processing job.
owner	No	String	Owner of a batch processing job.
proxyUser	No	String	Proxy user (resource tenant) to which a batch processing job belongs.
kind	No	String	Type of a batch processing job. Only Spark parameters are supported.
queue	No	String	Queue where a batch processing job is located.
image	No	String	Custom image. The format is <b>Organization name/Image name:Image version</b> . This parameter is valid only when <b>feature</b> is set to <b>custom</b> . You can use this parameter with the <b>feature</b> parameter to specify a user-defined Spark image for job running.
req_body	No	String	Request parameter details.
update_time	No	Long	Time when a batch processing job is updated. The timestamp is in milliseconds.

## Example Request

None

## Example Response

```
{  
    "from": 0,  
    "total": 1,  
    "sessions": [  
        {  
            "id": "178fa687-2e8a-41ed-a439-b00de60bb176",  
            "state": "dead",  
            "appId": null,  
            "log": [  
                "stdout: ",  
                "stderr: ",  
                "YARN Diagnostics: "  
            ],  
            "sc_type": "A",  
            "cluster_name": "test",  
            "create_time": 1531906043036  
        }  
    ]  
}
```

## Status Codes

[Table 10-16](#) describes the status code.

**Table 10-16** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 10.1.4 Querying Batch Job Details

#### Function

This API is used to query details about a batch processing job based on the job ID.

#### URI

- URI format  
GET /v2.0/{project\_id}/batches/{batch\_id}
- Parameter description

**Table 10-17** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
batch_id	Yes	String	ID of a batch processing job.

## Request

None

## Response

**Table 10-18** Response parameters

Parameter	Mandatory	Type	Description
id	No	String	ID of a batch processing job.
appId	No	String	Back-end application ID of a batch processing job.
name	No	String	Name of a batch processing job.
owner	No	String	Owner of a batch processing job.
proxyUser	No	String	Proxy user (resource tenant) to which a batch processing job belongs.
state	No	String	Status of a batch processing job. For details, see <a href="#">Table 10-7</a> in <a href="#">Creating a Batch Processing Job</a> .
kind	No	String	Type of a batch processing job. Only Spark parameters are supported.
log	No	Array of Strings	Last 10 records of the current batch processing job.
sc_type	No	String	Type of a computing resource. If the computing resource type is customized, value <b>CUSTOMIZED</b> is returned.
cluster_name	No	String	Queue where a batch processing job is located.
queue	No	String	Queue where a batch processing job is located.

Parameter	Mandatory	Type	Description
create_time	No	Long	Time when a batch processing job is created. The timestamp is expressed in milliseconds.
update_time	No	Long	Time when a batch processing job is updated. The timestamp is expressed in milliseconds.
req_body	No	String	Request parameter details.

## Example Request

None

## Example Response

```
{
  "id": "0a324461-d9d9-45da-a52a-3b3c7a3d809e",
  "appId": "",
  "name": "",
  "owner": "",
  "proxyUser": "",
  "state": "starting",
  "kind": "",
  "log": [
    {
      "stdout": "",
      "stderr": "",
      "YARN Diagnostics": ""
    }
  ],
  "sc_type": "A",
  "cluster_name": "test",
  "queue": "test",
  "create_time": 1531906043036,
  "update_time": 1531906043036
}
```

## Status Codes

[Table 10-19](#) describes the status code.

**Table 10-19** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 10.1.5 Querying a Batch Job Status

#### Function

This API is used to obtain the execution status of a batch processing job.

#### URI

- URI format  
GET /v2.0/{project\_id}/batches/{batch\_id}/state
- Parameter description

**Table 10-20** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
batch_id	Yes	ID of a batch processing job.

#### Request

None

#### Response

**Table 10-21** Response parameters

Parameter	Mandatory	Type	Description
id	No	String	ID of a batch processing job, which is in the universal unique identifier (UUID) format.
state	No	String	Status of a batch processing job. For details, see <a href="#">Table 10-7</a> in <a href="#">Creating a Batch Processing Job</a> .

#### Example Request

None

## Example Response

```
{"id":"0a324461-d9d9-45da-a52a-3b3c7a3d809e","state":"Success"}
```

## Status Codes

[Table 10-22](#) describes the status code.

**Table 10-22** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

### 10.1.6 Querying Batch Job Logs

#### Function

This API is used to query the back-end logs of batch processing jobs.

#### URI

- URI format  
GET /v2.0/{project\_id}/batches/{batch\_id}/log
- Parameter description

**Table 10-23** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
batch_id	Yes	String	ID of a batch processing job.

**Table 10-24** Request parameters

Parameter	Mandatory	Type	Description
from	No	Integer	Start line of the log to be displayed. By default, the last 100 lines of the log are displayed. If a log file contains fewer than 100 lines, line 0 is the start line.
size	No	Integer	Number of logs to be queried.
type	No	String	If <b>type</b> is set to <b>driver</b> , the Spark Driver log is generated.
index	No	Integer	When a submitted job is retried, multiple driver logs are generated. This parameter specifies the <b>index</b> number of the specified driver log. The default value is <b>0</b> . This parameter must be used together with the <b>type</b> parameter. If only <b>index</b> is specified, the default value of <b>type</b> is <b>driver</b> .

## Request

None

## Response

**Table 10-25** Response parameters

Parameter	Mandatory	Type	Description
id	No	String	ID of a batch processing job.
from	No	String	Start index of a log.
total	No	Long	Total number of records in a log.
log	No	Array of Strings	Log of the current batch processing job.

## Example Request

None

## Example Response

```
{
  "id": "0a324461-d9d9-45da-a52a-3b3c7a3d809e",
  "from": 0,
```

```
"total": 3,  
"log": [  
    "Detailed information about job logs"  
]  
}
```

## Status Codes

[Table 10-26](#) describes the status code.

**Table 10-26** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 11

# APIs Related to Flink Job Templates

## 11.1 Creating a Template

### Function

This API is used to create a user template for the DLI service. A maximum of 100 user templates can be created.

### URI

- URI format  
POST /v1.0/{project\_id}/streaming/job-templates
- Parameter description

**Table 11-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 11-2** Request parameters

Parameter	Mandatory	Type	Description
name	Yes	String	Template name. The value can contain 1 to 64 characters.

Parameter	Mandatory	Type	Description
desc	No	String	Template description. Length range: 0 to 512 characters.
sql_body	No	String	Stream SQL statement, which includes at least the following three parts: source, query, and sink. Length range: 0 to 2,048 characters.
tags	No	Array of Objects	Label of a Flink job template. For details, see <a href="#">Table 11-3</a> .
job_type	No	String	Flink job template type.

**Table 11-3** tags parameter

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key.
value	Yes	String	Tag key.

## Response

**Table 11-4** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successful.
message	No	String	Message content.
template	No	Object	Information about job update. For details, see <a href="#">Table 11-5</a> .

**Table 11-5** template parameters

Parameter	Mandatory	Type	Description
template_id	No	Long	Template ID.

Parameter	Mandatory	Type	Description
name	No	String	Template name.
desc	No	String	Template description.
create_time	No	Long	Time when the template is created.
job_type	No	String	Job template type

## Example Request

Create a job template named **simple\_stream\_sql**.

```
{  
    "name": "simple_stream_sql",  
    "desc": "Example of quick start",  
    "sql_body": "select * from source_table"  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "A template is created successfully.",  
    "template": {  
        "template_id": 0,  
        "name": "IoT_example",  
        "desc": "Example of quick start",  
        "create_time": 1516952710040,  
        "job_type": "flink_sql_job"  
    }  
}
```

## Status Codes

[Table 11-6](#) describes status codes.

**Table 11-6** Status codes

Status Code	Description
200	A template is created successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 11.2 Updating a Template

### Function

This API is used to update existing templates in DLI.

### URI

- URI format  
PUT /v1.0/{project\_id}/streaming/job-templates/{template\_id}
- Parameter description

**Table 11-7** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
template_id	Yes	String	Template ID.

### Request

**Table 11-8** Request parameters

Parameter	Mandatory	Type	Description
name	No	String	Template name. Length range: 0 to 57 characters.
desc	No	String	Template description. Length range: 0 to 512 characters.
sql_body	No	String	Stream SQL statement, which includes at least the following three parts: source, query, and sink. Length range: 0 to 1024 x 1024 characters.

## Response

**Table 11-9** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

Update job template information, including the template name, template description, and template SQL statements.

```
{  
    "name": "simple_stream_sql",  
    "desc": "Example of quick start",  
    "sql_body": "select * from source_table"  
}
```

## Example Response

```
{  
    "is_success": "true",  
    "message": "The template is updated successfully."  
}
```

## Status Codes

[Table 11-10](#) describes status codes.

**Table 11-10** Status codes

Status Code	Description
200	A template is updated successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 11.3 Deleting a Template

### Function

This API is used to delete a template. A template used by jobs can also be deleted.

### URI

- URI format  
DELETE /v1.0/{project\_id}/streaming/job-templates/{template\_id}
- Parameter description

**Table 11-11** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
template_id	Yes	String	Template ID.

### Request

None

### Response

- Parameter description

**Table 11-12** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the response is successful. Value <b>true</b> indicates success.
message	No	String	Message content.
template	No	Object	Information about the template to be deleted. For details, see <a href="#">Table 11-13</a> .

**Table 11-13 template parameters**

Parameter	Mandatory	Type	Description
template_id	No	Long	Template ID.

## Example Request

None

## Example Response

```
{  
    "is_success": "true",  
    "message": "The template is deleted successfully.",  
    "template": {  
        "template_id": 2  
    }  
}
```

## Status Codes

[Table 11-14](#) describes status codes.

**Table 11-14 Status codes**

Status Code	Description
200	A template is deleted successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 11.4 Querying the Template List

### Function

This API is used to query the job template list. Currently, only custom templates can be queried.

### URI

- URI format  
GET /v1.0/{project\_id}/streaming/job-templates

- Parameter description

**Table 11-15** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 11-16** query parameter description

Parameter	Mandatory	Type	Description
name	No	String	Template name. Fuzzy query by name is supported.
tags	No	String	List of tag names. The value is <b>k=v</b> for a single tag. Multiple tags are separated by commas (,). Example: <b>tag1=v1,tag2=v2</b> .
offset	No	Long	Job offset.
limit	No	Integer	Number of returned data records. The default value is <b>10</b> .
order	No	String	Sorting style of the query results. <ul style="list-style-type: none"><li>• <b>asc</b>: The query results are displayed in ascending order.</li><li>• <b>desc</b>: The query results are displayed in the descending order.</li></ul> The default value is <b>desc</b> .

## Request

None

## Response

**Table 11-17** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successful.
message	No	String	Message content.

Parameter	Mandatory	Type	Description
template_list	No	Object	Information about the template list. For details, see <a href="#">Table 11-18</a> .

**Table 11-18 template\_list parameters**

Parameter	Mandatory	Type	Description
total_count	No	Integer	Total number of templates.
templates	No	Array of Objects	Detailed information about a template. For details, see <a href="#">Table 11-19</a> .

**Table 11-19 templates parameters**

Parameter	Mandatory	Type	Description
template_id	No	Integer	Template ID.
name	No	String	Template name.
desc	No	String	Template description.
create_time	No	Long	Time when the template is created.
update_time	No	Long	Time when the template is updated.
sql_body	No	String	Stream SQL statement. Contains at least the <b>source</b> , <b>query</b> , and <b>sink</b> parts.
job_type	No	String	Job template type.

## Example Request

None

## Example Response

```
{  
  "is_success": "true",  
  "message": "The template list is obtained successfully.",  
  "template_list": {  
    "total_count": 2,  
    "templates": [  
      {  
        "id": 1,  
        "name": "Flink Stream Processing Template",  
        "desc": "A template for processing streaming data using Flink.",  
        "create_time": 1625000000000,  
        "update_time": 1625000000000,  
        "sql_body": "SELECT * FROM my_stream",  
        "job_type": "Stream Processing"  
      },  
      {  
        "id": 2,  
        "name": "Apache Beam Pipeline Template",  
        "desc": "A template for running Apache Beam pipelines.",  
        "create_time": 1625000000000,  
        "update_time": 1625000000000,  
        "sql_body": "beam: PCollection<String> words = beam: Text.readFrom(textIO);",  
        "job_type": "Beam Pipeline"  
      }  
    ]  
  }  
}
```

```
{  
    "template_id": 2,  
    "name": "updatetest",  
    "desc": "Example of quick start",  
    "create_time": 1578748092000,  
    "update_time": 1578748092000,  
    "sql_body": "select * from source_table",  
    "job_type": "flink_sql_job"  
},  
{  
    "template_id": 1,  
    "name": "we",  
    "desc": "qwe",  

```

## Status Codes

[Table 11-20](#) describes status codes.

**Table 11-20** Status codes

Status Code	Description
200	Template list query succeeds.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 12 APIs Related to Enhanced Datasource Connections

## 12.1 Creating an Enhanced Datasource Connection

### Function

This API is used to create an enhanced datasource connection with other services.

### URI

- URI format  
POST /v2.0/{project\_id}/datasource/enhanced-connections
- Parameter description

**Table 12-1** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 12-2** Request parameters

Parameter	Man dato ry	Type	Description
name	Yes	String	Name of the connection. <ul style="list-style-type: none"><li>The name can contain only letters, digits, and underscores (_), and cannot be left empty.</li><li>A maximum of 64 characters are allowed.</li></ul>
dest_vpc_i d	Yes	String	The ID of the service VPC to be connected.
dest_netw ork_id	Yes	String	The subnet ID of the to-be-connected service.
queues	No	Array of Strings	List of queue names that are available for datasource connections.
routetable _id	No	String	Route table associated with the subnet of the service.
hosts	No	Array of Objects	The user-defined host information. A maximum of 20,000 records are supported. For details, see <a href="#">hosts request parameters</a> .
tags	No	Array of Objects	Tags of datasource connections. For details, see <a href="#">Table 12-4</a> .

**Table 12-3** hosts request parameters

Parameter	Man dato ry	Type	Description
name	No	String	The user-defined host name. The value can consist of 128 characters, including digits, letters, underscores (_), hyphens (-), and periods (.). It must start with a letter.
ip	No	String	The IPv4 address of the host.

**Table 12-4** tags parameter

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key.
value	Yes	String	Tag key.

## Response

**Table 12-5** Response parameters

Parameter	Type	Description
is_success	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	String	System prompt. If execution succeeds, the message may be left blank.
connection_id	String	Connection ID. Identifies the UUID of a datasource connection.

## Example Request

Create an enhanced datasource connection for a queue and configure host information.

```
{
  "name": "test",
  "dest_vpc_id": "22094d8f-c310-4621-913d-4c4d655d8495",
  "dest_network_id": "78f2562a-36e4-4b39-95b9-f5aab22e1281",
  "queues": [
    "q1",
    "q2"
  ],
  "hosts": [
    {
      "ip": "192.168.0.1",
      "name": "ecs-97f8-0001"
    },
    {
      "ip": "192.168.0.2",
      "name": "ecs-97f8-0002"
    }
  ]
}
```

## Example Response

```
{
  "is_success": true,
  "message": "Create peer connection for queues:{queue list in the request parameter}",
  "connection_id": "2a620c33-5609-40c9-affd-2b6453071b0f"
}
```

## Status Codes

[Table 12-6](#) describes the status code.

**Table 12-6** Status codes

Status Code	Description
201	The job is created successfully.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 12.2 Deleting an Enhanced Datasource Connection

### Function

This API is used to delete an enhanced datasource connection.

The connection that is being created cannot be deleted.

### URI

- URI format  
`DELETE /v2.0/{project_id}/datasource/enhanced-connections/{connection_id}`
- Parameter description

**Table 12-7** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
connection_id	Yes	String	Connection ID. Identifies the UUID of a datasource connection. Set the value to the connection ID returned by <a href="#">Creating an Enhanced Datasource Connection</a> .

## Request

None

## Response

**Table 12-8** Response parameters

Parameter	Type	Description
is_success	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	String	System message. Value <b>Deleted</b> indicates that the operation is successful.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "Deleted"  
}
```

## Status Codes

[Table 12-9](#) describes the status code.

**Table 12-9** Status codes

Status Code	Description
200	Deletion succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 12.3 Querying an Enhanced Datasource Connection List

### Function

This API is used to query the list of created enhanced datasource connections.

### URI

- URI format  
GET /v2.0/{project\_id}/datasource/enhanced-connections
- Parameter description

**Table 12-10** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 12-11** query parameter description

Parameter	Mandatory	Type	Description
limit	No	String	The maximum number of connections to be queried. The default value is <b>100</b> . If <b>limit</b> is set to <b>0</b> , all datasource connections are returned.
offset	No	String	The offset of the query result. The default value is <b>0</b> . Note that the connections are sorted by creation time.
status	No	String	Connection status. The options are as follows: <ul style="list-style-type: none"><li>• Active: The connection has been activated.</li><li>• DELETED: The connection has been deleted.</li></ul> <b>NOTE</b> The connection status is case insensitive.
name	No	String	Connection name
tags	No	String	List of tag names. The value is <b>k=v</b> for a single tag. Multiple tags are separated by commas (,). Example: <b>tag1=v1,tag2=v2</b> .

 NOTE

The following is an example of the URL containing the **query** parameter:

```
GET /v2.0/{project_id}/datasource/enhanced-connections?  
limit={limit}&offset={offset}&status={status}&name={name}
```

## Request

None

## Response

**Table 12-12** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
connections	No	Array of Objects	Datasource connection information list. For details, see <a href="#">Table 12-13</a> .
count	No	Integer	Number of returned datasource connections.

**Table 12-13 connections** parameters

Parameter	Mandatory	Type	Description
id	No	String	Connection ID. Identifies the UUID of a datasource connection.
name	No	String	User-defined connection name.
status	No	String	Connection status. The options are as follows: <ul style="list-style-type: none"><li>• Active: The connection has been activated.</li><li>• DELETED: The connection has been deleted.</li></ul>
available_queue_info	No	Array of Objects	For details about how to create a datasource connection for each queue, see <a href="#">Table 12-14</a> .

Parameter	Mandatory	Type	Description
dest_vpc_id	No	String	The VPC ID of the connected service.
dest_network_id	No	String	Subnet ID of the connected service.
isPrivis	No	Boolean	Whether the project permissions have been granted for the enhanced datasource connection. If the datasource connection has the permissions, the value of this field is <b>false</b> . Otherwise, the value is <b>true</b> .
create_time	No	Long	Time when a link is created. The time is converted to a UTC timestamp.
hosts	No	Array of objects	User-defined host information. For details, see <a href="#">Table 12-15</a> .

**Table 12-14** available\_queue\_info parameter description

Parameter	Mandatory	Type	Description
peer_id	No	String	ID of a datasource connection.
status	No	String	Connection status. For details about the status code, see <a href="#">Table 12-16</a> .
name	No	String	Name of a queue.
err_msg	No	String	Detailed error message when the status is <b>FAILED</b> .
update_time	No	Long	Time when the available queue list was updated.

**Table 12-15 hosts** parameters

Parameter	Mandatory	Type	Description
name	No	String	Custom host name
ip	No	String	IPv4 address of the host

**Table 12-16** Connection status

Parameter	Definition	Description
CREATING	Creating	The datasource connection is being created.
ACTIVE	Active	The datasource connection has been created, and the connection to the destination address is normal.
FAILED	Failed	Failed to create a datasource connection.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "count": 1,  
    "connections": [  
        {  
            "name": "withvpc",  
            "id": "4c693ecc-bab8-4113-a838-129cedc9a563",  
            "available_queue_info": [  
                {  
                    "status": "ACTIVE",  
                    "name": "resource_mode_1",  
                    "peer_id": "d2ae6628-fa37-4e04-806d-c59c497492d1",  
                    "err_msg": "",  
                    "update_time": 1566889577861  
                }  
            ],  
            "dest_vpc_id": "22094d8f-c310-4621-913d-4c4d655d8495",  
            "dest_network_id": "78f2562a-36e4-4b39-95b9-f5aab22e1281",  
            "isPrivis": true,  
            "create_time": 1566888011125,  
            "status": "ACTIVE"  
        }  
    ]  
}
```

## Status Codes

[Table 12-17](#) describes the status code.

**Table 12-17** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 12.4 Querying an Enhanced Datasource Connection

## Function

This API is used to query the created enhanced datasource connections.

## URI

- URI format  
GET /v2.0/{project\_id}/datasource/enhanced-connections/{connection\_id}
- Parameter description

**Table 12-18** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
connection_id	Yes	String	Connection ID. Identifies the UUID of a datasource connection.

## Request

None

## Response

**Table 12-19** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.

Parameter	Mandatory	Type	Description
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
id	No	String	Connection ID. Identifies the UUID of a datasource connection.
name	No	String	User-defined connection name.
status	No	String	Connection status. The options are as follows: <ul style="list-style-type: none"><li>• Active: The connection has been activated.</li><li>• DELETED: The connection has been deleted.</li></ul>
available_queue_info	No	Array of Objects	For details about how to create a datasource connection for each queue, see <a href="#">Table 12-20</a> .
dest_vpc_id	No	String	The VPC ID of the connected service.
dest_network_id	No	String	Subnet ID of the connected service.
create_time	No	Long	Time when a link is created. The time is converted to a UTC timestamp.
hosts	No	Array of Objects	User-defined host information. For details, see <a href="#">hosts parameter description</a> .

**Table 12-20** available\_queue\_info parameter description

Parameter	Mandatory	Type	Description
peer_id	No	String	ID of a datasource connection.
status	No	String	Connection status. For details about the status code, see <a href="#">Table 12-22</a> .
name	No	String	Name of a queue.
err_msg	No	String	Detailed error message when the status is FAILED.
update_time	No	Long	Time when the available queue list was updated.

**Table 12-21** hosts parameter description

Parameter	Mandatory	Type	Description
name	No	String	The user-defined host name.
ip	No	String	The IPv4 address of the host.

**Table 12-22** Connection status

Parameter	Definition	Description
CREATING	Creating	The datasource connection is being created.
ACTIVE	Active	The datasource connection has been created, and the connection to the destination address is normal.
FAILED	Failed	Failed to create a datasource connection.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "name": "withvpc",  
    "id": "4c693ecc-bab8-4113-a838-129cedc9a563",  
    "available_queue_info": [  
        {  
            "status": "ACTIVE",  
            "name": "resource_mode_1",  
            "peer_id": "d2ae6628-fa37-4e04-806d-c59c497492d1",  
            "err_msg": "",  
            "update_time": 1566889577861  
        }  
    ],

            "name": "ecs-97f8-0001"  
        },  
        {  
            "ip": "192.168.0.2",  
            "name": "ecs-97f8-0002"  
        }  
    ]  
}
```

## Status Codes

[Table 12-23](#) describes the status code.

**Table 12-23** Status codes

Status Code	Description
200	The query is successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 12.5 Binding a Queue

### Function

This API is used to bind a queue to a created enhanced datasource connection.

### URI

- URI format  
POST /v2.0/{project\_id}/datasource/enhanced-connections/{connection\_id}/associate-queue
- Parameter description

**Table 12-24** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
connection_id	Yes	String	Connection ID. Identifies the UUID of a datasource connection. Set the value to the connection ID returned by <a href="#">Creating an Enhanced Datasource Connection</a> .

## Request

**Table 12-25** Request parameters

Parameter	Mandatory	Type	Description
queues	No	Array of Strings	List of queue names that are available for datasource connections.

## Response

**Table 12-26** Response parameters

Parameter	Type	Description
is_success	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	String	System prompt. If execution succeeds, the message may be left blank.

## Example Request

Bind created enhanced datasource connections to queues **q1** and **q2**.

```
{  
  "queues": [  
    "q1",  
    "q2"  
  ]  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": "associated peer connection for queues: {q1,q2}."  
}
```

## Status Codes

[Table 12-27](#) describes the status code.

**Table 12-27** Status codes

Status Code	Description
200	Resource bound succeeded.

Status Code	Description
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 12.6 Unbinding a Queue

## Function

This API is used to unbind a queue from an enhanced datasource connection.

## URI

- URI format  
POST /v2.0/{project\_id}/datasource/enhanced-connections/{connection\_id}/disassociate-queue
- Parameter description

**Table 12-28** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
connection_id	Yes	String	Connection ID. Identifies the UUID of a datasource connection.

## Request

**Table 12-29** Request parameters

Parameter	Mandatory	Type	Description
queues	No	Array of String	List of queue names that are available for datasource connections.

## Response

**Table 12-30** Response parameters

Parameter	Type	Description
is_success	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	String	System prompt. If execution succeeds, the message may be left blank.

## Example Request

Unbind queues **q1** and **q2** from enhanced datasource connections.

```
{  
  "queues": [  
    "q1",  
    "q2"  
  ]  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": "Disassociated peer connection for queues:{q1,q2}."  
}
```

## Status Codes

[Table 12-31](#) describes the status code.

**Table 12-31** Status codes

Status Codes	Description
200	Resource unbound succeeded.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 12.7 Modifying the Host Information

### Function

This API is used to modify the host information of a connected datasource. Only full overwriting is supported.

### URI

- URI format  
`PUT /v2.0/{project_id}/datasource/enhanced-connections/{connection_id}`
- Parameter description

**Table 12-32** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
connection_id	Yes	String	Connection ID. Identifies the UUID of a datasource connection.

### Request

**Table 12-33** Request parameters

Parameter	Mandatory	Type	Description
hosts	Yes	Array of objects	The user-defined host information. A maximum of 20,000 records are supported. For details, see <a href="#">hosts request parameters</a> . If this parameter is left blank, all configured host information will be deleted.

**Table 12-34** hosts request parameters

Parameter	Man dato ry	Type	Description
name	No	String	The user-defined host name. The value can consist of 128 characters, including digits, letters, underscores (_), hyphens (-), and periods (.). It must start with a letter.
ip	No	String	The IPv4 address of the host.

## Response

**Table 12-35** Response parameters

Paramete r	Type	Description
is_success	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	String	System prompt. If execution succeeds, the message may be left blank.

## Example Request

Modify the host information of an enhanced datasource connection.

```
{  
  "hosts": [  
    {  
      "ip": "192.168.0.1",  
      "name": "ecs-97f8-0001"  
    },  
    {  
      "ip": "192.168.0.2",  
      "name": "ecs-97f8-0002"  
    }  
  ]  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": ""  
}
```

## Status Codes

[Table 12-36](#) describes the status code.

**Table 12-36** Status codes

Status Code	Description
200	The modification operations are successful.
400	Request error.
500	Internal service error.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 12.8 Querying Authorization of an Enhanced Datasource Connection

### Function

This API is used to query the authorization about an enhanced datasource connection.

### URI

- URI format  
GET /v2.0/{project\_id}/datasource/enhanced-connections/{connection\_id}/privileges
- Parameter description

**Table 12-37** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
connection_id	Yes	String	Connection ID. Identifies the UUID of a datasource connection.

### Request

None

## Response

**Table 12-38** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
connection_id	No	String	Enhanced datasource connection ID, which is used to identify the UUID of a datasource connection.
privileges	No	Array of Object	Datasource connection information about each authorized project. For details, see <a href="#">Table 12-39</a> .

**Table 12-39** privileges parameters

Parameter	Mandatory	Type	Description
object	No	String	Object information during authorization.
applicant_project_id	No	String	ID of an authorized project.
privileges	No	Array of Strings	Authorization operation information.

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "",  
    "privileges": [  
        {  
            "object": "edsconnections.503fc86a-5e60-4349-92c2-7e399404fa8a",  
            "applicant_project_id": "330e068af1334c9782f4226acc00a2e2",  
            "privileges": ["BIND_QUEUE"]  
        }  
    ],  
}
```

```
        "connection_id": "503fc86a-5e60-4349-92c2-7e399404fa8a"  
    }
```

## Status Codes

[Table 12-40](#) describes status codes.

**Table 12-40** Status codes

Status Code	Description
200	The query is successful.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 12-41** Error codes

Error Code	Error Message
DLI.0001	Connection 503fc86a-5e60-4349-92c2-7e399404fa8a does not exist.

# 13 Global Variable-related APIs

---

## 13.1 Creating a Global Variable

### Function

This API is used to create a global variable.

### URI

- URI format  
POST /v1.0/{project\_id}/variables
- Parameter description

**Table 13-1** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 13-2** Request parameters

Parameter	Mandatory	Type	Description
var_name	Yes	String	A global variable name can contain a maximum of 128 characters, including only digits, letters, and underscores (_), but cannot start with an underscore (_) or contain only digits.
var_value	Yes	String	Global variable value.
is_sensitive	No	Boolean	Whether to set a variable as a sensitive variable. The default value is <b>false</b> .

## Response

**Table 13-3** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.

## Example Request

Create a global variable that is sensitive.

```
{  
  "var_name": "string",  
  "var_value": "string",  
  "is_sensitive": true  
}
```

## Example Response

```
{  
  "is_success": true,  
  "message": "string"  
}
```

## Status Codes

**Table 13-4** describes status codes.

**Table 13-4** Status codes

Status Code	Description
200	A variable is created successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 13-5** Error codes

Error Code	Error Message
DLI.0001	Parameter check errors occur.
DLI.0999	The object exists.

## 13.2 Deleting a Global Variable

### Function

This API is used to delete a global variable.

Only the user who creates a global variable can delete the variable.

### URI

- URI format  
`DELETE /v1.0/{project_id}/variables/{var_name}`
- Parameter description

**Table 13-6** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

Parameter	Mandatory	Type	Description
var_name	Yes	String	A global variable name can contain a maximum of 128 characters, including only digits, letters, and underscores (_), but cannot start with an underscore (_) or contain only digits.

## Request

None

## Response

- Parameter description

**Table 13-7** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example Request

None

## Example Response

```
{  
  "is_success": true,  
  "message": "string"  
}
```

## Status Codes

[Table 13-8](#) describes status codes.

**Table 13-8** Status codes

Status Code	Description
200	A variable is deleted successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 13-9** Error codes

Error Code	Error Message
DLI.0001	Parameter check errors occur.
DLI.0999	Server-side errors occur.

## 13.3 Modifying a Global Variable

### Function

This API is used to modify a global variable.

### URI

- URI format  
`PUT /v1.0/{project_id}/variables/{var_name}`
- Parameter description

**Table 13-10** URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
var_name	Yes	String	A global variable name can contain a maximum of 128 characters, including only digits, letters, and underscores (_), but cannot start with an underscore (_) or contain only digits.

## Request

**Table 13-11** Request parameters

Parameter	Mandatory	Type	Description
var_value	Yes	String	Global variable value.

## Response

**Table 13-12** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	Message content.

## Example Request

Change the value of a sensitive variable.

```
{  
    "var_value": "string"  
}
```

## Example Response

```
{  
    "is_success": true,  
    "message": "string"  
}
```

## Status Codes

**Table 13-13** describes status codes.

**Table 13-13** Status codes

Status Code	Description
200	A variable is modified successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 13-14** Error codes

Error Code	Error Message
DLI.0001	Parameter check errors occur.
DLI.0999	Server-side errors occur.
DLI.12004	The job does not exist. Check the reason or create a job.

## 13.4 Querying All Global Variables

### Function

This API is used to query information about all global variables in the current project.

### URI

- URI format  
GET /v1.0/{project\_id}/variables
- Parameter description

**Table 13-15** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

**Table 13-16** query parameter description

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of returned records displayed on each page. The default value is <b>100</b> .
offset	No	Integer	Offset. The default value is <b>0</b> .

## Request

None

## Response

**Table 13-17** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
count	No	Integer	Number of global variables.
global_vars	No	Array of Objects	Global variable information. For details, see <a href="#">Table 13-18</a> .

**Table 13-18** `global_vars` parameters

Parameter	Mandatory	Type	Description
id	No	Long	Global variable ID.
var_name	Yes	String	Global variable name.
var_value	Yes	String	Global variable value.
project_id	No	String	Project ID.
user_id	No	String	User ID.
user_name	No	String	Username
is_sensitive	No	Boolean	Whether to set a variable as a sensitive variable.
create_time	No	Long	Creation time
update_time	No	Long	Update time

## Example Request

None

## Example Response

```
{  
    "is_success": true,  
    "message": "string",  
    "count": 0,  
    "global_vars": [  
        {  
            "id": 0,  
            "var_name": "string",  
            "var_value": "string",  
            "project_id": "string",  
            "user_id": "string"  
        }  
    ]  
}
```

## Status Codes

**Table 13-19** Status codes

Status Code	Description
200	All variables are queried successfully.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

**Table 13-20** Error codes

Error Code	Error Message
DLI.0001	Parameter check errors occur.
DLI.0999	Server-side errors occur.

# 14 Permissions Policies and Supported Actions

---

This section describes fine-grained permissions management for your DLI. If your account does not need individual IAM users, then you may skip this section.

By default, new IAM users do not have permissions assigned. You need to add them to one or more groups, and attach permissions policies or roles to these groups. Users inherit permissions from the groups to which they are added. After authorization, the user can perform specified operations on MRS based on the permissions.

- Roles are a type of coarse-grained authorization mechanism that defines permissions related to user responsibilities.
- Policies define API-based permissions for operations on specific resources under certain conditions, allowing for more fine-grained, secure access control of cloud resources.

## NOTE

Policy-based authorization is useful if you want to allow or deny the access to an API.

An account has all of the permissions required to call all APIs, but IAM users must have the required permissions specifically assigned. The permissions required for calling an API are determined by the actions supported by the API. Only users who have been granted permissions allowing the actions can call the API successfully. For example, if an IAM user needs to create buckets using an API, the user must have been granted permissions that allow the **dli:queue:create\_queue** action.

## Supported Actions

VBS provides system-defined policies that can be directly used in IAM. You can also create custom policies and use them to supplement system-defined policies, implementing more refined access control. Operations supported by policies are specific to APIs. The following are common concepts related to policies:

- Permissions: Allow or deny operations on specified resources under specific conditions.
- APIs: RESTful APIs that can be called in a custom policy.

- Actions: added to a custom policy to control permissions for specific operations.
- Related actions: Actions on which a specific action depends to take effect. When assigning permissions for the action to a user, you also need to assign permissions for the related actions.
- IAM or enterprise projects: Type of projects for which an action will take effect. Policies that contain actions supporting both IAM and enterprise projects can be assigned to user groups and take effect in both IAM and Enterprise Management. Policies that only contain actions supporting IAM projects can be assigned to user groups and only take effect for IAM. Such policies will not take effect if they are assigned to user groups in Enterprise Project.

 NOTE

The check mark (✓) indicates that an action takes effect. The cross mark (✗) indicates that an action does not take effect.

DLI supports the following actions that can be defined in custom policies:

**Table 14-1** Actions

Permission	API	Actions	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Creating a Queue	POST /v1.0/{project_id}/queues	dli:queue:createQueue	-	✓	✓
Deleting a Queue	DELETE /v1.0/{project_id}/queues/{queue_name}	dli:queue:dropQueue	-	✓	✓
Submitting a Job	POST /v1.0/{project_id}/jobs/submit-job	dli:queue:submitJob	-	✓	✗
Canceling a job	DELETE /v1.0/{project_id}/jobs/{job_id}	dli:queue:cancelJob	-	✓	✗
Viewing Queue Permissions of Other Users	GET /v1.0/{project_id}/queues/{queue_name}/users	dli:queue:showPrivileges	-	✓	✗

Permission	API	Actions	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Restarting a queue	PUT /v1.0/{project_id}/queues/{queue_name}/action	dli:queue:restart	-	✓	✗
Scaling out/in a queue	PUT /v1.0/{project_id}/queues/{queue_name}/action	dli:queue:scaleQueue	-	✓	✗
Granting elastic resource pool permissions	PUT /v1.0/{project_id}/user-authorization	dli:elasticresourcepool:grantPrivilege	-	✓	✗
Revoking elastic resource pool permissions	PUT /v1.0/{project_id}/user-authorization	dli:elasticresourcepool:revoke Privilege	-	✓	✗
Creating a Database	POST /v1.0/{project_id}/databases	dli:database:create Database	-	✓	✗
Deleting a Database	DELETE /v1.0/{project_id}/databases/{database_name}	dli:database:dropDatabase	-	✓	✗
Modifying database configuration	POST /v1.0/{project_id}/jobs/submit-job	dli:database:alterDatabaseProperties	-	✓	✗
Explaining the SQL Statement as an Execution Plan	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:explain	-	✓	✗

Permission	API	Actions	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Creating a Table	POST /v1.0/{project_id}/databases/{database_name}/tables	dli:database:createTable	-	✓	✗
Creating a View	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:createView	-	✓	✗
Creating a Function	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:createFunction	-	✓	✗
Describing a Function	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:describeFunction	-	✓	✗
Deleting a Function	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:dropFunction	-	✓	✗
Displaying a Function	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:showFunctions	-	✓	✗
Creating a role	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:createRole	-	✓	✗
Deleting a role	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:dropRole	-	✓	✗

Permission	API	Actions	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Displaying a Role	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:showRoles	-	√	✗
Displaying All Roles	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:showAllRoles	-	√	✗
Binding a Role	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:grantRole	-	√	✗
Unbinding the Role	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:revokeRole	-	√	✗
Displaying the Binding Relationships Between All Roles and Users	POST /v1.0/{project_id}/jobs/submit-job, SQL statement invoking	dli:database:showUsers	-	√	✗
Viewing Database Permissions of Other Users	GET /v1.0/{project_id}/databases/{database_name}/users	dli:database:showPrivileges	-	√	✗
Displaying database	GET /v1.0/{project_id}/databases	dli:database:display_database	-	√	✗

# 15 Out-of-Date APIs

## 15.1 Table-related APIs (Discarded)

### 15.1.1 Querying All Tables (Discarded)

#### Function

This API is used to query information about tables that meet the filtering criteria or all the tables in the specified database.

#### NOTE

Information described in this section has been disused. You are advised to view the information described in [Querying All Tables \(Recommended\)](#).

#### URI

- URI format  
GET /v1.0/{project\_id}/databases/{database\_name}?keyword=tb&with-detail=true
- Parameter description

**Table 15-1** URI parameters

Parameter	Man dator y	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
database_name	Yes	Name of the database where the table resides.
keyword	No	Keywords used to filter table names.

Parameter	Mandatory	Description
with-detail	No	Whether to obtain detailed information about tables (such as owner and size).

## Request

None

## Response

**Table 15-2** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	Yes	String	System prompt. If execution succeeds, the parameter setting may be left blank.
table_count	Yes	Integer	Total number of tables.
tables	Yes	Array of objects	Table information. For details, see <a href="#">Table 15-3</a> .

**Table 15-3** tables parameters

Parameter	Mandatory	Type	Description
create_time	Yes	Long	Time when a table is created. The timestamp is expressed in milliseconds.
data_type	No	String	Type of data in the OBS table. Currently, the parameter value can be <b>parquet</b> , <b>ORC</b> , <b>CSV</b> , or <b>JSON</b> . This parameter is valid only for OBS tables.
data_location	Yes	String	Data storage location. OBS tables, DLI tables, and views are available.
last_access_time	Yes	Long	Time when the table was last updated. The timestamp is expressed in milliseconds.
location	No	String	Storage path on the OBS table.

Parameter	Mandatory	Type	Description
owner	Yes	String	Table owner.
table_name	Yes	String	Name of a table.
table_size	Yes	Long	Size of a DLI table. Set this parameter to <b>0</b> for non-DLI tables.
table_type	Yes	String	Type of a table. <ul style="list-style-type: none"><li>• <b>EXTERNAL:</b> Indicates an OBS table.</li><li>• <b>MANAGED:</b> Indicates a DLI table.</li><li>• <b>VIEW:</b> Indicates a view.</li></ul>
partition_columns	No	String	Partition field. This parameter is valid only for OBS partition tables.

#### NOTE

If **with-detail** is set to **false** in the URI, only values of parameters **data\_location**, **table\_name**, and **table\_type** are returned.

### Example

- Example request  
None
- Example response (successful request)

```
{  
    "is_success": true,  
    "message": "",  
    "table_count": 1,  
    "tables": [  
        { "create_time":1517364268000,  
          "data_location":"OBS",  
          "data_type":"csv",  
          "last_access_time":1517364268000,  
          "location":"obs://DLI/sqldata/data.txt",  
          "owner":"test",  
          "partition_columns": ["a0"],  
          "table_name":"obs_t",  
          "table_size":0,  
          "table_type":"EXTERNAL"  
        }  
    ]  
}
```

#### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.2 APIs Related to SQL Jobs (Discarded)

## 15.2.1 Submitting a SQL Job (Discarded)

### Function

This API is used to submit jobs to a queue using SQL statements.

The job types support DDL, DCL, IMPORT, EXPORT, QUERY, and INSERT. Functions of IMPORT and EXPORT are the same as those described in [Importing Data](#) and [Exporting Data](#). The difference lies in the implementation method.

Additionally, you can use other APIs to query and manage jobs. For details, see the following sections:

- [Querying Job Status](#)
- [Querying Job Details](#)
- [Querying the Job Execution Result-Method 1 \(Discarded\)](#)
- [Exporting Query Results](#)
- [Querying All Jobs](#)
- [Canceling a Job \(Discarded\)](#)

#### NOTE

- This API is synchronous if **job\_type** in the response message is **DCL**.
- Information described in this section has been disused. You are advised to view the information described in [Submitting a SQL Job \(Recommended\)](#).

### URI

- URI format  
POST /v1.0/{project\_id}/queues/{queue\_name}/jobs/submit-job
- Parameter description

**Table 15-4** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	Current queue name. Resources of the queue are used for computing if SQL requires resources.

## Request

**Table 15-5** Request parameters

Parameter	Mandatory	Type	Description
sql	Yes	String	SQL statement that you want to execute.
current db	No	String	Database where the SQL statement is executed. This parameter does not need to be configured during database creation.
conf	No	Array of objects	User-defined parameter that applies to the job. Currently, the following configuration items are supported: <ul style="list-style-type: none"><li>• <b>dli.sql.join.preferSortMergeJoin</b> (specifies whether SortMergeJoin is preferred)</li><li>• <b>dli.sql.autoBroadcastJoinThreshold</b> (specifies the data volume threshold to use BroadcastJoin. If the data volume exceeds the threshold, BroadcastJoin will be automatically enabled.)</li><li>• <b>dli.sql.caseSensitive</b> (specifies whether SQL statements are case-sensitive)</li><li>• <b>dli.sql.shuffle.partitions</b> (specifies the number of partitions during shuffling)</li><li>• <b>dli.sql.cbo.enabled</b> (specifies whether to enable the CBO optimization policy)</li><li>• <b>dli.sql.cbo.joinReorder.enabled</b> (specifies whether join reordering is allowed when CBO optimization is enabled)</li></ul>

## Response

**Table 15-6** Response parameters

Parameter	Mandatory	Type	Description
is_success	Yes	Boolean	If <b>job_type</b> is set to <b>DCL</b> , this parameter indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	Yes	String	System prompt. If execution succeeds, the parameter setting may be left blank.

Parameter	Mandatory	Type	Description
job_id	Yes	String	ID of a job returned after a job is generated and submitted by using SQL statements. The job ID can be used to query the job status and results.
job_type	Yes	String	Type of a job. Job types include the following: <ul style="list-style-type: none"> <li>• DDL</li> <li>• DCL</li> <li>• IMPORT</li> <li>• EXPORT</li> <li>• QUERY</li> <li>• INSERT</li> </ul>
schema	No	Array of objects	If the statement type is DDL, the column name and type of DDL are displayed.
rows	No	Array of objects	When the statement type is DDL, results of the DDL are displayed.

## Example

- Example request
 

```
{
    "currentdb": "db1",
    "sql": "desc table1",
    "conf": [
      "dli.sql.shuffle.partitions = 200"
    ]
}
```
- Example response (successful request)
 

```
{
  "is_success": true,
  "message": "",
  "job_id": "8ecb0777-9c70-4529-9935-29ea0946039c",
  "job_type": "DDL",
  "schema": [
    {
      "col_name": "string"
    },
    {
      "data_type": "string"
    },
    {
      "comment": "string"
    }
  ],
  "rows": [
    [
      "c1",
      "int",
      "string"
    ]
  ]
}
```

```
    null
],
[
  "c2",
  "string",
  null
]
}
```

#### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.2.2 Canceling a Job (Discarded)

### Function

This API is used to cancel a submitted job. If execution of a job completes or fails, this job cannot be canceled.

#### NOTE

Information described in this section has been disused. You are advised to view the information described in [Canceling a Job \(Recommended\)](#).

### URI

- URI format

DELETE /v1.0/{project\_id}/queues/{queue\_name}/jobs/{job\_id}

- Parameter description

**Table 15-7** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	Name of the queue where the job to be canceled resides.
job_id	Yes	Job ID.

### Request

None

## Response

**Table 15-8** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.

## Example

- Example request  
None
- Example response (successful request)  
{  
  "is\_success": true,  
  "message": ""  
}

 **NOTE**

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.2.3 Querying the Job Execution Result-Method 1 (Discarded)

### Function

This API is used to view the job execution result after a job is executed using SQL query statements. Currently, you can only query execution results of jobs of the **QUERY** type.

 **NOTE**

- You can view the first 1000 result records only. To view all result records, export them first. For details, see [Exporting Query Results](#).

### URI

- URI format  
`GET/v1.0/{project_id}/queues/{queue_name}/jobs/{job_id}?page-size=size&current-page=page_number`
- Parameter description

**Table 15-9** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
queue_name	Yes	Current queue name. SQL uses resources of the current queue for computing.
job_id	Yes	Job ID.
page-size	No	Maximum number of lines displayed on each page. The value range is as follows: [1, 100]. The default value is <b>50</b> .
current-page	No	Current page number. The default value is <b>1</b> .

## Request

None

## Response

**Table 15-10** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	Job ID.
job_type	No	String	Job type, including <b>DDL</b> , <b>DCL</b> , <b>IMPORT</b> , <b>EXPORT</b> , <b>QUERY</b> , and <b>INSERT</b> . Currently, you can only query execution results of jobs of the <b>QUERY</b> type.
row_count	No	Integer	Total number of job results.
input_size	No	long	Amount of data scanned during job execution.

Parameter	Mandatory	Type	Description
schema	No	Array of objects	Name and type of the job result column.
rows	No	Array of objects	Job results set.

## Example

- Example request  
None
- Example response (successful request)

```
{  
    "is_success": true,  
    "message": "",  
    "job_id": "ead0b276-8ed4-4eb5-b520-58f1511e7033",  
    "job_type": "QUERY",  
    "row_count": 1,  
    "input_size": 74,  
    "schema": [  
        {  
            "c1": "int"  
        },  
        {  
            "c2": "string"  
        }  
    ],  
    "rows": [  
        [  
            23,  
            "sda"  
        ]  
    ]  
}
```

### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.2.4 Querying the Job Execution Result-Method 2 (Discarded)

### Function

This API is used to view the job execution result after a job is executed using SQL query statements. Currently, you can only query execution results of jobs of the **QUERY** type.

You can view the first 1000 result records only. To view all result records, export them first. For details, see [Exporting Query Results](#).

## URI

- URI format  
GET/v1.0/{project\_id}/jobs/{job\_id}?page-size={size}&current-page={page\_number}&queue-name={queue\_name}
- Parameter description

**Table 15-11** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
job_id	Yes	Job ID.
page-size	No	Maximum number of lines displayed on each page. The value range is as follows: [1, 100]. The default value is <b>50</b> .
current-page	No	Current page number. The default value is <b>1</b> .
queue-name	No	Name of the execution queue for obtaining job results. If this parameter is not specified, the default system queue is used.

## Request

None

## Response

**Table 15-12** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	No	String	System prompt. If execution succeeds, the parameter setting may be left blank.
job_id	No	String	Job ID.

Parameter	Mandatory	Type	Description
job_type	No	String	Job type, including <b>DDL</b> , <b>DCL</b> , <b>IMPORT</b> , <b>EXPORT</b> , <b>QUERY</b> , <b>INSERT</b> , <b>DATA_MIGRATION</b> , <b>UPDATE</b> , <b>DELETE</b> , <b>RESTART_QUEUE</b> and <b>SCALE_QUEUE</b> . Currently, you can only query execution results of jobs of the <b>QUERY</b> type.
row_count	No	Integer	Total number of job results.
input_size	No	long	Amount of data scanned during job execution.
schema	No	Array of objects	Name and type of the job result column.
rows	No	Array of objects	Job results set.

## Example

- Example request  
None
- Example response (successful request)

```
{  
  "is_success": true,  
  "message": "",  
  "job_id": "ead0b276-8ed4-4eb5-b520-58f1511e7033",  
  "job_type": "QUERY",  
  "row_count": 1,  
  "input_size": 74,  
  "schema": [  
    {  
      "c1": "int"  
    },  
    {  
      "c2": "string"  
    }  
  ],  
  "rows": [  
    [  
      23,  
      "sda"  
    ]  
  ]  
}
```

### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.3 APIs Related to Data Upload (Discarded)

## 15.3.1 Authenticating a Created Data Uploading Job (Discarded)

### Function

This API is used to check whether a created data uploading job is valid and, if valid, authorize the job to upload data to DLI.

### URI

- URI format  
POST /v1.0/{project\_id}/uploader/authentication
- Parameter description

**Table 15-13** URI parameter

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

**Table 15-14** Request parameters

Parameter	Mandatory	Type	Description
job_id	Yes	String	Job ID, which is used to identify a data uploading job.

### Response

**Table 15-15** Response parameters

Parameter	Type	Description
is_success	Boolean	Indicates whether the request is successfully executed. Value <b>true</b> indicates that the request is successfully executed.
message	String	System prompt. If execution succeeds, the parameter setting may be left blank.

Parameter	Type	Description
mask	Array of strings	Authorization mask information.

## Example

- Example request

```
{  
    "job_id": "6b29eb77-4c16-4e74-838a-2cf7959e9203"  
}
```

- Example response (successful request)

```
{  
    "is_success": "true",  
    "message": "check upload id success",  
    "mask": [  
        "mask_str_01",  
        "mask_str_02"  
    ]  
}
```

### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.4 Cluster-related APIs

### 15.4.1 Creating a Cluster (Discarded)

#### Function

This API is used to create a cluster. The cluster will be bound to specified compute resources.

#### URI

- URI format  
POST /v2.0/{project\_id}/clusters
- Parameter description

**Table 15-16** URI parameter

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

In addition to the common request header parameters involved in cluster creation, the special request header parameters described in [Table 15-17](#) are also involved.

**Table 15-17 Header description**

Parameter	Mandatory	Description
X-Auth-Token	Yes	User token obtained from IAM.
Accept	Yes	The default value is <b>application/json</b> .
Content-Type	Yes	The value is specified to <b>application/json</b> .
charset	Yes	The encoding format is specified to <b>UTF8</b> .

[Table 15-18](#) describes the request parameters.

**Table 15-18 Request parameters**

Parameter	Mandatory	Type	Description
cluster_name	Yes	String	Name of a new cluster. The name can contain only digits, letters, and underscores (_), but cannot contain only digits or start with an underscore (_).
description	No	String	Description of a cluster.
cu_count	Yes	Integer	Number of compute units bound to a cluster. You can select 16 CUs, 64 CUs, or 256 CUs. If you need a larger quota, contact the DLI service administrator.
cidr_in_vpc	No	String	VPC CIDR block
cidr_in_mngntsubnet	No	String	CIDR block of the management subnet
cidr_in_subnet	No	String	Special subnet CIDR block

## Response

- Return code  
Code 201 is returned if the operation is successful.
- Response parameter  
None

## Example

- Example request

```
{  "cluster_name": "cluster1",  "description": "test cluster",  "cu_count": 16}
```
- Example response (successful request)  
None

 NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.4.2 Deleting a Cluster (Discarded)

### Function

This API is used to delete a specified cluster.

### URI

- URI format  
`DELETE /v2.0/{project_id}/clusters/{cluster_name}`
- Parameter description

**Table 15-19** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
cluster_name	Yes	Cluster name.

### Request

None

### Response

- Return code  
Code 200 is returned if the operation is successful.
- Response parameters  
None

## Example

- Example request  
None
- Example response (successful request)  
None

### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.4.3 Querying Information of a Specified Cluster (Discarded)

### Function

This API is used to query information about a specified cluster, including the name, description, and number of bound computing resources.

### URI

- URI format  
`GET /v2.0/{project_id}/clusters/{cluster_name}`
- Parameter description

**Table 15-20** URI parameters

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .
cluster_name	Yes	Cluster name

### Request

None

### Response

- Return code  
Code 200 is returned if the operation is successful.
- Response parameters  
[Table 15-21](#) describes the response parameters.

**Table 15-21** Response parameters

Parameter	Mandatory	Type	Description
create_time	Yes	Long	Time when a cluster is created. The timestamp is expressed in milliseconds.
description	No	String	Description of a cluster.
cu_count	Yes	Integer	Number of CUs that are bound to a cluster.
owner	Yes	String	User who creates the cluster.
cluster_name	Yes	String	Cluster name
status	Yes	String	Cluster status. For details, see <a href="#">Table 15-22</a> .
resource_mode	Yes	Integer	Cluster type. <ul style="list-style-type: none"><li>• 0: Shared cluster</li><li>• 1: Dedicated cluster</li></ul>

**Table 15-22** Cluster status

Parameter	Description
CREATING	The cluster is being created and is unavailable now.
AVAILABLE	The cluster is available.
SUSPENDED	The cluster is suspended because it is not used for a long time. You can reactivate the cluster by using the <a href="#">Creating a Batch Processing Job</a> interface.
RECOVERING	The cluster is being recovered from the suspending state. The cluster is available again after its status changes to <b>AVAILABLE</b> .

## Example

- Example request  
None
- Example response (successful request)

```
{  
    "create_time": 1508143955000,  
    "cu_count": 16,  
    "description": "test",  
    "owner": "tenant1",  
    "cluster_name": "cluster1",  
    "status": "AVAILABLE",  
    "resource_mode": 0  
}
```

 NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.4.4 Querying All Cluster Information (Discarded)

### Function

This API is used to list all clusters under the project.

### URI

- URI format  
GET/v2.0/{project\_id}/clusters
- Parameter description

**Table 15-23** URI parameter

Parameter	Mandatory	Description
project_id	Yes	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

### Request

None

### Response

- Return code  
Code 200 is returned if the operation is successful.
- Response parameters

**Table 15-24** Response parameters

Parameter	Mandatory	Type	Description
create_time	Yes	Long	Time when a cluster is created
description	No	String	Description of a cluster.
cu_count	Yes	Integer	Number of CUs that are bound to a cluster.
owner	Yes	String	User who creates the cluster.

Parameter	Mandatory	Type	Description
cluster_name	Yes	String	Cluster name
status	Yes	String	Cluster status. For details, see <a href="#">Table 15-22</a> .
resource_mode	Yes	Integer	Cluster type. <ul style="list-style-type: none"><li>• 0: Shared cluster</li><li>• 1: Dedicated cluster</li></ul>

## Example

- Example request

None

- Example response (successful request)

```
{  
  "clusters": [  
    {  
      "create_time": 1508143955000,  
      "cu_count": 16,  
      "description": "test",  
      "owner": "tenant1",  
      "cluster_name": "cluster1",  
      "status": "AVAILABLE",  
      "resource_mode": 0  
    }  
  ]  
}
```

### NOTE

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

## 15.5 APIs Related to Flink Jobs (Discarded)

### 15.5.1 Querying Job Monitoring Information (Discarded)

#### Function

This API is used to query job monitoring information. You can query monitoring information about multiple jobs at the same time.

#### URI

- URI format  
POST /v1.0/{project\_id}/streaming/jobs/metrics
- Parameter description

**Table 15-25** URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details about how to obtain its value, see <a href="#">Obtaining a Project ID</a> .

## Request

**Table 15-26** Request parameters

Parameter	Mandatory	Type	Description
job_ids	Yes	Array of Long	List of job IDs.

## Response

**Table 15-27** Response parameters

Parameter	Mandatory	Type	Description
is_success	No	Boolean	Indicates whether the request is successful.
message	No	String	Message content.
metrics	No	Object	Information about a job list. For details, see <a href="#">Table 15-28</a> .

**Table 15-28** payload parameters

Parameter	Mandatory	Type	Description
jobs	No	Array of Objects	Monitoring information about all jobs. For details, see <a href="#">Table 15-29</a> .

**Table 15-29** jobs parameters

Parameter	Mandatory	Type	Description
job_id	No	Long	Job ID.

Parameter	Mandatory	Type	Description
metrics	No	Object	All input and output monitoring information about a job. For details, see <a href="#">Table 15-30</a> .

**Table 15-30 metrics parameters**

Parameter	Mandatory	Type	Description
sources	No	Array of Objects	All source streams. For details, see <a href="#">Table 15-31</a> .
sinks	No	Array of Objects	All sink streams. For details, see <a href="#">Table 15-31</a> .
total_read_rate	No	Double	Total read rate.
total_write_rate	No	Double	Total write rate.

**Table 15-31 source/sinks parameters**

Parameter	Mandatory	Type	Description
name	No	String	Name of the source or sink stream.
records	No	Long	Total number of records.
corrupted_records	No	Long	Number of dirty data records.

## Example

- Example request

```
{  "job_ids": [298765, 298766]}
```
- Example response

```
{  "is_success": true,  "message": "Message content",  "metrics": {    "jobs": [      {        "job_id": 0,        "metrics": {          "sources": [            {
```

```
        "name": "Source: KafKa_6070_KAFKA_SOURCE",
        "records": 0,
        "corrupted_records": 0
    },
],
"sinks": [
{
    "name": "Source: KafKa_6070_KAFKA_SOURCE",
    "records": 0,
    "corrupted_records": 0
},
],
"total_read_rate": 100,
"total_write_rate": 100
}
]
}
```

## Status Codes

**Table 15-32** Status codes

Status Code	Description
200	The query of job monitoring information succeeds.
400	The input parameter is invalid.

## Error Codes

If an error occurs when this API is invoked, the system does not return the result similar to the preceding example, but returns the error code and error information. For details, see [Error Codes](#).

# 16 Public Parameters

## 16.1 Status Codes

[Table 16-1](#) describes status codes.

**Table 16-1** Status codes

Status Code	Message	Description
100	Continue	The client should continue with its request. This interim response is used to inform the client that part of the request has been received and has not yet been rejected by the server.
101	Switching Protocols	The protocol should be switched. The protocol can only be switched to a newer protocol. For example, the current HTTP protocol is switched to a later version of HTTP.
200	Success	The request has been fulfilled. This indicates that the server has provided the requested web page.
201	Created	The request is successful and the server has created a new resource.
202	Accepted	The request has been accepted, but the processing has not been completed.
203	Non-Authoritative Information	Unauthorized information. The request is successful.

<b>Status Code</b>	<b>Message</b>	<b>Description</b>
204	NoContent	The server has successfully processed the request, but does not return any content. The status code is returned in response to an HTTP OPTIONS request.
205	Reset Content	The server has successfully processed the request, but does not return any content.
206	Partial Content	The server has successfully processed the partial GET request.
300	Multiple Choices	There are multiple options for the location of the requested resource. The response contains a list of resource characteristics and addresses from which a user terminal (such as a browser) can choose the most appropriate one.
301	Moved Permanently	The requested resource has been assigned a new permanent URI, and the new URI is contained in the response.
302	Found	The requested resource resides temporarily under a different URI.
303	See Other	The response to the request can be found under a different URI, and should be retrieved using a GET or POST method.
304	Not Modified	The requested resource has not been modified. In such a case, there is no need to retransmit the resource since the client still has a previously-downloaded copy.
305	Use Proxy	The requested resource is available only through a proxy.
306	Unused	The HTTP status code is no longer used.
400	BadRequest	Invalid request. The client should not repeat the request without modifications.
401	Unauthorized	This status code is returned after the client provides the authentication information, indicating that the authentication information is incorrect or invalid.
402	Payment Required	This status code is reserved for future use.

Status Code	Message	Description
403	Forbidden	The server has received the request and understood it, but the server is refusing to respond to it. The client should modify the request instead of re-initiating it.
404	NotFound	The requested resource cannot be found. The client should not repeat the request without modifications.
405	MethodNotAllowed	A request method is not supported for the requested resource. The client should not repeat the request without modifications.
406	Not Acceptable	The server could not fulfill the request according to the content characteristics of the request.
407	Proxy Authentication Required	This code is similar to 401, but indicates that the client must first authenticate itself with the proxy.
408	Request Time-out	The server has timed out waiting for the request. The client may repeat the request without modifications at any time later.
409	Conflict	The request could not be processed due to a conflict in the request. This status code indicates that the resource that the client is attempting to create already exists, or that the request has failed to be processed because of the update of the conflict request.
410	Gone	The requested resource cannot be found. The status code indicates that the requested resource has been deleted permanently.
411	Length Required	The server is refusing to process the request without a defined <b>Content-Length</b> .
412	Precondition Failed	The server does not meet one of the preconditions that the requester puts on the request.
413	Request Entity Too Large	The server is refusing to process a request because the request entity is too large for the server to process. The server may disable the connection to prevent the client from sending requests consecutively. If the server is only temporarily unable to process the request, the response will contain a <b>Retry-After</b> header field.

Status Code	Message	Description
414	Request-URI Too Large	The Request-URI is too long for the server to process.
415	Unsupported Media Type	The server does not support the media type in the request.
416	Requested range not satisfiable	The requested range is invalid.
417	Expectation Failed	The server has failed to meet the requirements of the <b>Expect</b> request-header field.
422	UnprocessableEntity	The request was well-formed but was unable to be followed due to semantic errors.
429	TooManyRequests	The client sends excessive requests to the server within a given time (exceeding the limit on the access frequency of the client), or the server receives excessive requests within a given time (beyond its processing capability). In this case, the client should resend the request after the time specified in the <b>Retry-After</b> header of the response has elapsed.
500	InternalServerError	The server is able to receive the request but unable to understand it.
501	Not Implemented	The server does not support the requested function.
502	Bad Gateway	The server was acting as a gateway or proxy and received an invalid request from the remote server.
503	ServiceUnavailable	The requested service is invalid. The client should not repeat the request without modifications.
504	ServerTimeout	The request cannot be fulfilled within a given time. This status code is returned to the client only when the <b>Timeout</b> parameter is specified in the request.
505	HTTP Version not supported	The server does not support the HTTP protocol version used in the request.

## 16.2 Error Codes

If an error occurs in API calling, no result is returned. Identify the cause of error based on the error codes of each API. If an error occurs in API calling, HTTP status code 4xx or 5xx is returned. The response body contains the specific error code

and information. If you are unable to identify the cause of an error, contact technical personnel and provide the error code so that we can help you solve the problem as soon as possible.

## Format of an Error Response Body

If an error occurs during API calling, the system returns an error code and a message to you. The following shows the format of an error response body:

```
{  
  "error_msg": "The format of message is error",  
  "error_code": "DLI.0001"  
}
```

In the preceding information, **error\_code** is an error code, and **error\_msg** describes the error.

**Table 16-2** Exceptions

Parameter	Parameter Type	Description
error_code	String	Error code. For details, see <a href="#">Table 16-3</a> .
error_msg	String	Error details.

## Error Code Description

**Table 16-3** Error codes

Status Code	Error Code	Error Message
400	DLI.0001	Parameter check errors occur.
400	DLI.0002	The object does not exist.
400	DLI.0003	SQL permission verification fails.
400	DLI.0004	SQL syntax parsing errors occur.
400	DLI.0005	SQL semantics parsing errors occur.
400	DLI.0006	The object exists.
400	DLI.0007	The operation is not supported.
400	DLI.0008	Metadata errors occur.
400	DLI.0009	System restrictions.
400	DLI.0011	The file permission check fails.

Status Code	Error Code	Error Message
400	DLI.0012	Resource objects are unavailable.
401	DLI.0013	User authentication errors occur.
401	DLI.0014	Service authentication errors occur.
400	DLI.0015	Token parsing error.
400	DLI.0016	The identity and role are incorrect.
400	DLI.0018	Data conversion errors occur.
400	DLI.0019	The task times out.
400	DLI.0100	The result expires.
404	DLI.0023	No related resources were found.
400	DLI.0999	Server-side errors occur.
400	DLI.1028	The quota is insufficient.

## Example

If no queue named **testqueue** exists, the following error message is displayed when you submit a job submission request:

```
{  
  "error_code": "DLI.0002",  
  "error_msg": "There is no queue named testqueue"  
}
```

## 16.3 Obtaining a Project ID

### Scenario

A project ID is required for some URLs when an API is called. Obtain a project ID using either of the following methods:

- [Obtain the Project ID by Calling an API](#)
- [Obtain the Project ID from the Console](#)

### Obtaining a Project ID by Calling an API

You can obtain a project ID by calling an API.

The API for obtaining a project ID is **GET https://{{Endpoint}}/v3/projects**.  
**{Endpoint}** indicates the endpoint of IAM, which can be obtained from the administrator.

```
{
  "projects": [
    {
      "domain_id": "65382450e8f64ac0870cd180d14e684b",
      "is_domain": false,
      "parent_id": "65382450e8f64ac0870cd180d14e684b",
      "name": "project_name",
      "description": "",
      "links": {
        "next": null,
        "previous": null,
        "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"
      },
      "id": "a4a5d4098fb4474fa22cd05f897d6b99",
      "enabled": true
    }
  ],
  "links": {
    "next": null,
    "previous": null,
    "self": "https://www.example.com/v3/projects"
  }
}
```

## Obtaining a Project ID from the Management Console

To obtain a project ID from the Console, perform the following operations:

1. Log in to the management console.
2. Click the username and select **My Credentials** from the drop-down list.  
On the **My Credentials** page, view the project IDs in the project list.

## 16.4 Obtaining an Account ID

An account ID (domain-id) is required for some URLs when an API is called. To obtain an account ID, perform the following operations:

1. Log in to the management console.
2. Hover the cursor on the username in the upper right corner and select **My Credentials** from the drop-down list.
3. On the **API Credentials** page, view **Account ID**.

# A Change History

**Table A-1** Change history

Released On	Description
2023-10-24	This issue is the third official release. Adjusted the document structure by adding <a href="#">Resource-related APIs</a> .
2023-03-15	This issue is the second official release. <ul style="list-style-type: none"><li>• Updated descriptions about <a href="#">privileges</a> in <a href="#">Querying a User's Table Permissions</a>.</li></ul>
2020-4-30	This issue is the first official release.
